Executive Summary ..... 14
Challenges & Business Case ..... 15
Service-1: HRM & Leave Management ..... 18
Module-1: Organogram (Total Feature - 4) ..... 20
Module-2: Employee Management (Total Feature - 6) ..... 20
Module-3: Employee Office Management (Total Feature - 5) ..... 21
Module-4: ID Card Management (Total Feature - 8) ..... 22
Module-5: PDS (Personal Data Sheet) (Total Feature - 4) ..... 23
Module-6: Employee Modification with Dynamic Workflow (Total Feature - 5) ..... 24
Module-7: Users Module for Admin (Total Feature - 4) ..... 25
Module-8: Reset User Password for Admin (Total Feature - 1) ..... 26
Module-9: Director General (Total Feature -1) ..... 26
Module-10: Release and Assign (Total Feature - 4) ..... 26
Module-11: Leave Management (Total Feature - 7) ..... 26
Service-2: Payroll Management ..... 29
Module-1: Regular Salary – Earnings/Deductions (Total Feature - 6) ..... 31
Module-2: Payroll Pay Scale (Total Feature - 2) ..... 31
Module-3: Salary Fixation (Total Feature - 5) ..... 31
Features Description ..... 31
Module-4: Salary Process (Total Feature - 4) ..... 32
Module-5: Bonus Process (Total Feature - 1) ..... 32
Module-6: Bank Advice (Salary/Bonus) (Total Feature - 3) ..... 32
Module-7: Top Sheet (Salary/Bonus) (Total Feature - 2) ..... 33
Module-8: Salary Certification (Total Feature - 6) ..... 33
Module-9: Income Tax Statement (Total Feature - 8) ..... 33
Module-10: Journal Voucher (Total Feature - 9) ..... 34
Module-11: Payroll Accounts (Total Feature - 2) ..... 35
Module-12: Salary Month Lock (Total Feature - 1) ..... 35
Module-13: Download Payslip (Total Feature - 1) ..... 35
Module-14: Loan Management (Total Feature - 22) ..... 35
Module-15: GPF (General Provident Fund)(Total Feature-12) ..... 37
Service-3: Finance & Accounts Management ..... 40
Module - 1: Budget Management Module (Total Feature - 7) ..... 42
Module 2: Income Management (Total Feature - 5) ..... 42
Module-3: Expense Management (Total Feature - 6) ..... 43
Module - 4: Ledger & Accounting (Total Feature - 5) ..... 44
Module - 5: Voucher Management Module (Total Feature - 5) ..... 44
Module - 6: Chart of Accounts (Total Feature - 5) ..... 45
Module - 7: Payment Gateway (Total Feature - 6) ..... 45

Module - 8: Payroll Integration (Total Feature - 8) ..... 46
Module - 9: Reporting System (Total Feature - 4) ..... 47
Module - 10: Role-Based Access Control & Audit (Total Feature - 6) ..... 47
Service-4: Case Management System ..... 49
Module-1: Case Registration (Total Feature - 5) ..... 51
Module-2: Case Review & Assignment (Total Feature - 4) ..... 51
Module-3: Investigation Management (Total Feature - 4) ..... 51
Module-4: Hearing & Court Management (Total Feature - 4) ..... 51
Module-5: Approval Management (Total Feature - 4) ..... 52
Module-6: Fine & Penalty Management (Total Feature - 4) ..... 52
Module-7: Case Closure (Total Feature - 4) ..... 52
Module-8: Notification & Reporting (Total Feature - 5) ..... 53
Service-05: CM Mandatory New Certification ..... 55
Module-1. Application Submission (Total Feature - 4) ..... 57
Module-2. Application Review & Shortfall Management (Total Feature - 5) ..... 57
Module-3. Payment Processing (Total Feature - 4) ..... 57
Module-4. Inspection Setup (Total Feature - 3) ..... 58
Module-5. Inspection & Report (Total Feature - 5) ..... 58
Module-6. Verification Module (AD/DD) (Total Feature - 3) ..... 59
Module-7. Director Decision (Total Feature - 3) ..... 59
Module-8. Certification Complete (Total Feature - 3) ..... 59
Module-9. Rejection Management (Total Feature - 3) ..... 59
Module-10. Notification Management (Total Feature - 3) ..... 60
Module-11. Re-Inspection Management (Total Feature - 3) ..... 60
Module-12. User & Role Management (Total Feature - 7) ..... 60
Service-06: CM Mandatory Renewal Service ..... 63
Module-1. Application Submission (Total Feature - 4) ..... 65
Module-2. Application Review & Shortfall Management (Total Feature - 5) ..... 65
Module-3. Payment Processing (Total Feature - 4) ..... 65
Module-4. Inspection Setup (Total Feature - 3) ..... 66
Module-5. Inspection & Report (Total Feature - 5) ..... 66
Module-6. Verification Module (AD/DD) (Total Feature - 3) ..... 67
Module-7. Director Decision (Total Feature - 3) ..... 67
Module-8. Certification Complete (Total Feature - 3) ..... 67
Module-9. Rejection Management (Total Feature - 3) ..... 67
Module-10. Notification Management (Total Feature - 3) ..... 68
Module-11. Re-Inspection Management (Total Feature - 3) ..... 68
Module-12. User & Role Management (Total Feature - 7) ..... 68
Service-07: CM Mandatory Brand Inclusion Feature Description ..... 71
Module-1. Application Submission (Total Feature - 4) ..... 73

Module-2. Application Review & Shortfall Management (Total Feature - 5) ..... 73
Module-3. Payment Processing (Total Feature - 4) ..... 73
Module-4. Inspection Setup (Total Feature - 3) ..... 74
Module-5. Inspection & Report (Total Feature - 5) ..... 74
Module-6. Verification Module (AD/DD) (Total Feature - 3) ..... 74
Module-7. Director Decision (Total Feature - 3) ..... 75
Module-8. Certification Complete (Total Feature - 3) ..... 75
Module-9. Rejection Management (Total Feature - 3) ..... 75
Module-10. Notification Management (Total Feature - 3) ..... 76
Module-11. Re-Inspection Management (Total Feature - 3) ..... 76
Module-12. User & Role Management (Total Feature - 7) ..... 76
Service-08: CM Scope New Certification ..... 79
Module-1. Application Submission (Total Feature - 5) ..... 81
Module-2. Application Review & Shortfall Management (Total Feature - 8) ..... 81
Module-3. Inspection Planning (Total Feature - 4) ..... 82
Module-4. Primary Inspection (Total Feature - 5) ..... 82
Module-5. Formal Inspection (Total Feature - 5) ..... 82
Module-6. Laboratory Testing (Total Feature - 5) ..... 82
Module-7. Technical Evaluation (Total Feature - 4) ..... 83
Module-8. Verification & Approval (Total Feature - 5) ..... 83
Module-9. Certification Committee (Total Feature - 5) ..... 83
Module-10. Conditional Compliance (Total Feature - 5) ..... 84
Module-11. Payment Processing (Total Feature - 5) ..... 84
Module-12. License Management (Total Feature - 5) ..... 85
Module-13. Refusal & Rejection Management (Total Feature - 4) ..... 85
Module-14. Notification (Total Feature - 6) ..... 85
Module-15. Workflow & Task Management (Total Feature - 5) ..... 86
Module-16. Document Management (Total Feature - 7) ..... 86
Service-09: CM Scope Renewal Certification ..... 88
Module-1. Application Submission (Total Feature - 5) ..... 90
Module-2. Application Review & Shortfall Management (Total Feature - 8) ..... 90
Module-3. Inspection Planning (Total Feature - 4) ..... 91
Module-4. Primary Inspection (Total Feature - 5) ..... 91
Module-5. Formal Inspection (Total Feature - 5) ..... 91
Module-6. Laboratory Testing (Total Feature - 5) ..... 91
Module-7. Technical Evaluation (Total Feature - 4) ..... 92
Module-8. Verification & Approval (Total Feature - 5) ..... 92
Module-9. Certification Committee (Total Feature - 5) ..... 92
Module-10. Conditional Compliance (Total Feature - 5) ..... 93
Module-11. Payment Processing (Total Feature - 5) ..... 93

Module-12. License Management (Total Feature - 5) ..... 94
Module-13. Refusal & Rejection Management (Total Feature - 4) ..... 94
Module-14. Notification (Total Feature - 6) ..... 94
Module-15. Workflow & Task Management (Total Feature - 5) ..... 95
Module-16. Document Management (Total Feature - 7) ..... 95
Service-10: CM Scope Brand Inclusion Certification ..... 97
Module-1. Application Submission (Total Feature - 5) ..... 99
Module-2. Application Review & Shortfall Management (Total Feature - 8) ..... 99
Module-3. Inspection Planning (Total Feature - 4) ..... 100
Module-4. Primary Inspection (Total Feature - 5) ..... 100
Module-5. Formal Inspection (Total Feature - 5) ..... 100
Module-6. Laboratory Testing (Total Feature - 5) ..... 100
Module-7. Technical Evaluation (Total Feature - 4) ..... 101
Module-8. Verification & Approval (Total Feature - 5) ..... 101
Module-9. Certification Committee (Total Feature - 5) ..... 101
Module-10. Conditional Compliance (Total Feature - 5) ..... 102
Module-11. Payment Processing (Total Feature - 5) ..... 102
Module-12. License Management (Total Feature - 5) ..... 102
Module-13. Refusal & Rejection Management (Total Feature - 4) ..... 103
Module-14. Notification (Total Feature - 6) ..... 103
Module-15. Workflow & Task Management (Total Feature - 5) ..... 103
Module-16. Document Management (Total Feature - 7) ..... 104
Service-11: CM HALAL CERTIFICATION ..... 106
Module-1. Certificate Application (Total Feature - 4) ..... 108
Module-2. Application Review & Shortfall Management (Total Feature - 8) ..... 108
Module-3. Stage-1 Audit Management (Total Feature - 6) ..... 108
Module-4. Audit Observation & Compliance (Total Feature - 4) ..... 109
Module-5. Stage-2 Audit & Sample Management (Total Feature - 5) ..... 109
Module-6. Laboratory Testing (Total Feature - 5) ..... 109
Module-7. Technical Evaluation (Total Feature - 4) ..... 110
Module-8. Verification & Approval (Total Feature - 5) ..... 110
Module-9. Certification Committee (Total Feature - 5) ..... 110
Module-10. Conditional Compliance (Total Feature - 5) ..... 111
Module-11. Payment Processing (Total Feature - 5) ..... 111
Module-12. Certificate / License Management (Total Feature - 5) ..... 111
Module-13. Refusal & Rejection Management (Total Feature - 5) ..... 112
Module-14. Notification (Total Feature - 7) ..... 112
Module-15. Workflow & Task Management (Total Feature - 6) ..... 112
Module-16. Document Management (Total Feature - 7) ..... 113
Service-12: CM HALAL RENEWAL CERTIFICATION ..... 115

Module-1. Certificate Application (Total Feature - 4) ..... 117
Module-2. Application Review & Shortfall Management (Total Feature - 8) ..... 117
Module-3. Stage-1 Audit Management (Total Feature - 6) ..... 117
Module-4. Audit Observation & Compliance (Total Feature - 4) ..... 118
Module-5. Stage-2 Audit & Sample Management (Total Feature - 5) ..... 118
Module-6. Laboratory Testing (Total Feature - 5) ..... 118
Module-7. Technical Evaluation (Total Feature - 4) ..... 119
Module-8. Verification & Approval (Total Feature - 5) ..... 119
Module-9. Certification Committee (Total Feature - 5) ..... 119
Module-10. Conditional Compliance (Total Feature - 5) ..... 120
Module-11. Payment Processing (Total Feature - 5) ..... 120
Module-12. Certificate / License Management (Total Feature - 5) ..... 120
Module-13. Refusal & Rejection Management (Total Feature - 5) ..... 121
Module-14. Notification (Total Feature - 7) ..... 121
Module-15. Workflow & Task Management (Total Feature - 6) ..... 121
Module-16. Document Management (Total Feature - 7) ..... 122
Service-13: CM Halal Brand Inclusion ..... 124
Module-1. Certificate Application (Total Feature - 4) ..... 126
Module-2. Application Review & Shortfall Management (Total Feature - 8) ..... 126
Module-3. Stage-1 Audit Management (Total Feature - 6) ..... 126
Module-4. Audit Observation & Compliance (Total Feature - 4) ..... 127
Module-5. Stage-2 Audit & Sample Management (Total Feature - 5) ..... 127
Module-6. Laboratory Testing (Total Feature - 5) ..... 127
Module-7. Technical Evaluation (Total Feature - 4) ..... 128
Module-8. Verification & Approval (Total Feature - 5) ..... 128
Module-9. Certification Committee (Total Feature - 5) ..... 128
Module-10. Conditional Compliance (Total Feature - 5) ..... 129
Module-11. Payment Processing (Total Feature - 5) ..... 129
Module-12. Certificate / License Management (Total Feature - 5) ..... 129
Module-13. Refusal & Rejection Management (Total Feature - 5) ..... 130
Module-14. Notification (Total Feature - 7) ..... 130
Module-15. Workflow & Task Management (Total Feature - 6) ..... 130
Module-16. Document Management (Total Feature - 7) ..... 131
Service-14: Chemical Testing Feature Description ..... 133
Module-1. Sample Tracking (Total Feature - 4) ..... 135
Module-2. Resample Management (Total Feature - 4) ..... 135
Module-3. Sample Security (Total Feature - 3) ..... 135
Module-4. Multi-Level Verification (Total Feature - 4) ..... 136
Module-5. Correction & Return (Total Feature - 4) ..... 136
Module-6. Re-Test Management (Total Feature - 3) ..... 136

Module-7. Notification (Total Feature - 4) ..... 137
Module-8. Remarks & Comment (Total Feature - 4) ..... 137
Module-9. Report Generation (Total Feature - 3) ..... 137
Module-10. Task Management (Total Feature - 3) ..... 138
Module-11. Dashboard (Total Feature - 3) ..... 138
Module-12. Audit & Activity Log (Total Feature - 4) ..... 138
Module-13. Workflow Engine (Total Feature - 3) ..... 139
Module-14. Search (Total Feature - 4) ..... 139
Module-15. Access Control (Total Feature - 3) ..... 139
Module-16. Localization (Total Feature - 2) ..... 140
Module-17. Data Security (Total Feature - 3) ..... 140
Module-18. Report Delivery (Total Feature - 3) ..... 140
Module-19. Multiple Role Management (Total Feature - 3) ..... 140
Module-20. Regional Office Workflow (Total Feature - 3) ..... 141
Service-15: Physical Testing ..... 143
Module-1. User & Role Management (Total Feature - 9) ..... 145
Module-2. Application Management (Total Feature - 7) ..... 145
Module-3. Sample Management (Total Feature - 6) ..... 146
Module-4. Workflow Management (Total Feature - 7) ..... 146
Module-5. Parameter Management (Total Feature - 6) ..... 147
Module-6. Test & Result Management (Total Feature - 7) ..... 147
Module-7. Report Management (Total Feature - 9) ..... 148
Module-8. Notification Management (Total Feature - 5) ..... 149
Module-9. Energy Meter Management (Total Feature - 10) ..... 149
Module-10. Product & Laboratory Management (Total Feature - 6) ..... 150
Service-16: Physical Lab- Energy Meter ..... 152
Module-1. User & Role Management (Total Feature - 7) ..... 154
Module-2. Application Management (Total Feature - 7) ..... 154
Module-3. Shortfall Management (Total Feature - 5) ..... 155
Module-4. Sample Collection Management (Total Feature - 7) ..... 155
Module-5. Energy Meter Testing Management (Total Feature - 6) ..... 156
Module-6. Result Verification & Approval (Total Feature - 7) ..... 157
Module-7. Workflow Management (Total Feature - 6) ..... 157
Module-8. Retest Management (Total Feature - 5) ..... 158
Module-9. Test Report Management (Total Feature - 6) ..... 158
Module-10. Notification Management (Total Feature - 5) ..... 159
Module-11. Energy Meter Information Management (Total Feature - 5) ..... 159
Module-12. Tracking & Audit Management (Total Feature - 5) ..... 160
Service-17: MSC Certification ..... 162
Module-1: MSC Application Management (Total Feature - 6) ..... 164

Module-2: Application Payment and Document Management Module (Total Feature - 6) ..... 164
Module-3: Application Review and Adequacy Audit Module (Total Feature - 8) ..... 165
Module-4: Acceptance and Agreement Management Module (Total Feature - 8) ..... 166
Module-5: Man-Day Calculation and Audit Scheduling Module (Total Feature - 7) ..... 166
Module-6: Stage-1 Audit Management Module (Total Feature - 8) ..... 167
Module-7: Corrective Action Management Module (Total Feature - 9) ..... 168
Module-8: Stage-2 Audit Notice and Scheduling Module (Total Feature - 8) ..... 169
Module-9: Stage-2 Audit Management Module (Total Feature - 8) ..... 169
Module-10: Stage-2 Corrective Action and Findings Closure Module (Total Feature - 8) ..... 170
Module-11: Initial Certification Proposal Management Module (Total Feature - 6) ..... 171
Module-12: Audit and Certification Billing Module (Total Feature - 9) ..... 171
Module-13: Certification Committee Meeting Management Module (Total Feature - 8) ..... 172
Module-14: Certification Committee Minutes Management Module (Total Feature - 6) 173
Module-15: MSC Certificate Generation and Approval Module (Total Feature - 7) ..... 173
Module-16: Rejection, Rework and Follow-Up Audit Module (Total Feature - 6) ..... 174
Module-17: Workflow and Approval Management Module (Total Feature - 6) ..... 175
Module-18: Notification and Communication Management Module (Total Feature - 10) ..... 175
Module-19: Application and Workflow Tracking Module (Total Feature - 7) ..... 176
Module-20: MSC Reports and Dashboard Module (Total Feature - 9) ..... 177
Module-21: Audit Trail and Activity Log Module (Total Feature - 7) ..... 178
Module-22: Role-Based User and Access Management Module (Total Feature - 5) ..... 178
Module-23: External Integration Management Module (Total Feature - 7) ..... 179
Module-24: Certificate Verification and QR Code (Total Feature - 5) ..... 179
Service-18: MSC Re-certification Management System ..... 182
Module-1: Re-certification Application (Total Feature - 7) ..... 184
Module - 2: Application Review & Agreement Management (Total Feature - 10) ..... 184
Module - 3: Audit Planning & Scheduling (Total Feature - 10) ..... 185
Module - 4: Re-certification Audit Management (Total Feature - 9) ..... 185
Module - 5: Audit Findings & Corrective Action Management (Total Feature -10) ..... 186
6. Improvement Notice Management Module (Total Feature - 7) ..... 186
7. Technical Review & Proposal Management Module (Total Feature -6) ..... 187
8. Certification Committee Management Module (Total Feature - 9) ..... 187
9. Payment Processing Module (Total Feature - 7) ..... 188
10. Certificate & Document Management Module (Total Feature -7) ..... 188
11. Rejection Management Module (Total Feature - 4) ..... 189
12. Workflow & Task Management Module (Total Feature - 7) ..... 189

13. Notification Module (Total Feature - 10) ..... 190
14. Document Management Module (Total Feature - 10) ..... 190
Service-19: PCR Registration New Feature Description ..... 193
Module-1. Application Submission (Total Feature - 4) ..... 195
Module-2. Application Review & Shortfall Management (Total Feature - 5) ..... 195
Module-3. Payment Processing (Total Feature - 4) ..... 195
Module-4. Inspection Setup (Total Feature - 3) ..... 196
Module-5. Inspection & Report (Total Feature - 5) ..... 196
Module-6. Verification Module (AD/DD) (Total Feature - 3) ..... 197
Module-7. Approval Management (Total Feature - 3) ..... 197
Module-8. Registration Complete (Total Feature - 3) ..... 197
Module-9. Rejection Management (Total Feature - 2) ..... 197
Module-10. Notification Management (Total Feature - 3) ..... 198
Module-11. Re-Inspection Management (Total Feature - 3) ..... 198
Module-12. User & Role Management (Total Feature - 7) ..... 198
Module-13. Regional Office Workflow (Total Feature - 3) ..... 199
Service-20: PCR Registration Renewal ..... 201
Module - 1: Application Submission (Total Feature - 4) ..... 203
Module - 2: Application Review & Shortfall Management (Total Feature - 5) ..... 203
Module - 3. Payment Processing (Total Feature - 4) ..... 203
Module-4. Inspection Setup (Total Feature - 3) ..... 204
Module-5. Inspection & Report (Total Feature - 5) ..... 204
Module-6. Verification Module (AD/DD) (Total Feature - 3) ..... 205
Module-7. Approval Management (Total Feature - 3) ..... 205
Module-8. Registration Complete (Total Feature - 3) ..... 205
Module-9. Rejection Management (Total Feature - 2) ..... 205
Module-10. Notification Management (Total Feature - 3) ..... 206
Module-11. Re-Inspection Management (Total Feature - 3) ..... 206
Module-12. User & Role Management (Total Feature - 7) ..... 206
Module-13. Regional Office Workflow (Total Feature - 3) ..... 207
Service-21: PCR Brand Inclusion ..... 209
Module-1: Application Submission (Total Feature - 3) ..... 211
Module-2: Application Review & Shortfall Management (Total Feature - 5) ..... 211
Module-3: Payment Processing (Total Feature - 4) ..... 211
Module-4: Inspection Setup (Total Feature - 3) ..... 212
Module-5: Inspection & Report (Total Feature - 5) ..... 212
Module-6: Verification (AD/DD) (Total Feature - 3) ..... 213
Module-7: Approval Management (Total Feature - 3) ..... 213
Module-8: Registration Complete (Total Feature - 1) ..... 213
Module-9: Rejection Management (Total Feature - 2) ..... 213

Module-10: Notification Management (Total Feature - 3) ..... 214
Module-11: Re-Inspection Management (Total Feature - 3) ..... 214
Module-12: User & Role Management (Total Feature - 7) ..... 214
Module-13: Regional Office Workflow (Total Feature - 3) ..... 215
Service-22: Registered Importer/Exporter Certificate Service ..... 217
Module-1. Application Submission (Total Feature - 4) ..... 219
Module-2. Application Review & Shortfall Management (Total Feature - 6) ..... 219
Module-3. Inspection Scheduling (Total Feature - 4) ..... 219
Module-4. Inspection Management (Total Feature - 4) ..... 220
Module-5. Inspection Report Verification (Total Feature - 4) ..... 220
Module-6. Re-inspection Management (Total Feature - 4) ..... 220
Module-7. Payment Processing (Total Feature - 4) ..... 221
Module-8. Certificate Management (Total Feature - 5) ..... 221
Module-9. Rejection Management (Total Feature - 3) ..... 221
Module-10. Notification (Total Feature - 6) ..... 221
Module-11. Workflow & Task Management (Total Feature - 5) ..... 222
Module-12. Document Management (Total Feature - 4) ..... 222
Service-23: Registered Importer/Exporter Certificate Management Renewal ..... 224
Module- 1: Re-Application Submission (Total Feature - 6) ..... 226
Module- 2: Application Review & Shortfall Management (Total Feature - 6) ..... 226
Module- 3: Inspection Scheduling (Total Feature - 4) ..... 226
Module- 4: Inspection Management (Total Feature - 4) ..... 227
Module- 5: Inspection Report Verification (Total Feature - 4) ..... 227
Module- 6: Re-inspection Management (Total Feature - 4) ..... 227
Module- 7: Payment Processing (Total Feature - 4) ..... 228
Module- 8: Certificate Management (Total Feature - 5) ..... 228
Module- 9: Rejection Management (Total Feature - 3) ..... 228
Module- 10: Notification Management (Total Feature - 6) ..... 228
Module- 11: Workflow & Task Management (Total Feature - 5) ..... 229
Module- 12. Document Management (Total Feature - 4) ..... 229
Service-24: Metrology License Issue ..... 231
Module-1. Application Submission (Total Feature - 4) ..... 233
Module-2. Application Review & Assignment (Total Feature - 4) ..... 233
Module-3. Shortfall Management (Total Feature - 5) ..... 233
Module-4. Inspection Scheduling (Total Feature - 4) ..... 234
Module-5. Inspection Management (Total Feature - 3) ..... 234
Module-6. Inspection Verification & Approval (Total Feature - 4) ..... 234
Module-7. Re-inspection Management (Total Feature - 4) ..... 235
Module-8. Payment Processing (Total Feature - 4) ..... 235
Module-9. License Management (Total Feature - 4) ..... 235

Module-10. Rejection Management (Total Feature - 3) ..... 236
Module-11. Notification (Total Feature - 6) ..... 236
Module-12. Workflow & Task Management (Total Feature - 5) ..... 236
Module-13. Document Management (Total Feature - 4) ..... 237
Service-25: Metrology License Renewal Registration ..... 239
Module-1. Application Submission (Total Feature - 4) ..... 241
Module-2. Application Review & Assignment (Total Feature - 4) ..... 241
Module-3. Shortfall Management (Total Feature - 5) ..... 241
Module-4. Inspection Scheduling (Total Feature - 4) ..... 242
Module-5. Inspection Management (Total Feature - 3) ..... 242
Module-6. Inspection Verification & Approval (Total Feature - 4) ..... 242
Module-7. Re-inspection Management (Total Feature - 4) ..... 243
Module-8. Payment Processing (Total Feature - 4) ..... 243
Module-9. License Management (Total Feature - 4) ..... 243
Module-10. Rejection Management (Total Feature - 3) ..... 244
Module-11. Notification (Total Feature - 6) ..... 244
Module-12. Workflow & Task Management (Total Feature - 5) ..... 244
Module-13. Document Management (Total Feature - 4) ..... 245
Service-26: Tank Lorry Calibration ..... 247
Module-1. Application Submission (Total Feature - 4) ..... 249
Module- 2: Application Review & Assignment (Total Feature - 4) ..... 249
Module- 3: Shortfall Management (Total Feature - 5) ..... 249
Module- 4: Calibration Scheduling (Total Feature - 4) ..... 249
Module- 5: Calibration Management (Total Feature - 3) ..... 250
Module- 6: Calibration Report Verification (Total Feature - 4) ..... 250
Module- 7: License Management (Total Feature - 4) ..... 250
Module- 8: Re-inspection / Re-calibration Management (Total Feature - 4) ..... 250
Module- 9: Rejection Management (Total Feature - 3) ..... 251
Module- 10: Notification (Total Feature - 5) ..... 251
Module- 11: Workflow & Task Management (Total Feature - 5) ..... 251
Module- 12: Document Management (Total Feature - 4) ..... 252
Service-27: LPG Bottling Plant / LPG Filling Station / Fuel Filling Station Registration Service ..... 254
Module- 1: Application Submission (Total Feature - 4) ..... 256

# Executive Summary

This is to presents the detailed Scope of Work (SoW) for the proposed BSTI Enterprise Resource Planning (ERP) Solution, a fully integrated digital platform designed to automate, standardize, and streamline the end-to-end business operations of Bangladesh Standards and Testing Institution (BSTI). The solution aims to establish a centralized, paperless, and workflow-driven environment where all operational, administrative, financial, laboratory, certification, inspection, and human resource activities are managed through a single unified system.

The proposed ERP solution will serve as the core digital platform for BSTI, enabling seamless collaboration among departments, regional offices, laboratories, and stakeholders while ensuring data consistency, transparency, accountability, and real-time information sharing across the organization. By integrating all business functions into a single ecosystem, the system will eliminate fragmented processes, reduce manual intervention, improve operational efficiency, strengthen governance, and support data-driven decision-making.

This document provides a comprehensive description of the modules, sub-modules, and functional features included within the proposed solution. Each section outlines the purpose, business functionality, workflow, user responsibilities, approval mechanisms, notifications, reporting capabilities, integrations, and system controls required to support BSTI's operational and regulatory processes.

The feature descriptions contained in this document collectively define the functional scope of the proposed ERP solution and establish a common understanding among all stakeholders regarding the system capabilities, implementation boundaries, and expected business outcomes. This document will serve as the primary reference for solution design, development, testing, implementation, user acceptance, and future system enhancements, ensuring that the delivered solution aligns with BSTI's digital transformation objectives and long-term organizational vision.

## Challenges & Business Case

The Bangladesh Standards and Testing Institution (BSTI) manages a wide range of regulatory, certification, laboratory, inspection, financial, and administrative functions across multiple departments, regional offices, and laboratories. Most of these business processes operate through independent systems or manual procedures, resulting in fragmented information, duplicated data entry, limited process visibility, and lengthy approval cycles. The absence of an integrated enterprise platform creates operational inefficiencies, increases administrative workload, and makes it difficult to ensure consistent service delivery across the organization.

As BSTI continues to expand its regulatory responsibilities and digital services, the need for a centralized ERP solution has become increasingly critical. Existing processes involve multiple stakeholders, extensive documentation, manual coordination, and disconnected workflows, which often lead to delays, inconsistencies, and challenges in monitoring organizational performance. Decision-makers also face difficulties in obtaining accurate, real-time information due to data being distributed across different systems and manual records.

The proposed BSTI ERP Solution addresses these challenges by providing a unified enterprise platform that integrates all major business functions into a single digital ecosystem. The solution introduces standardized workflows, centralized master data management, automated approvals, real-time monitoring, integrated reporting, and secure information sharing across departments. By replacing isolated applications and paper-based operations with a workflow-driven digital environment, the ERP system will improve operational efficiency, strengthen governance, enhance regulatory compliance, and provide greater transparency throughout the organization.

The business case for implementing the ERP solution is based on BSTI's long-term digital transformation strategy, enabling the organization to modernize its internal operations while improving service delivery to industries, businesses, government agencies, and the general public. The integrated platform will establish a scalable foundation capable of supporting future business growth, policy changes, new regulatory services, and emerging digital initiatives without requiring major structural modifications.

This is the BSTI ERP Solution Architecture which shows all the ADmin,E-service and Ecommerce parts and their integration with each other.

## Service-1: HRM & Leave Management

The proposed **HRM & Leave Management Solution** is a fully integrated module of the BSTI Enterprise Resource Planning (ERP) system, designed to automate and centralize all human resource and leave management activities within a single digital platform. The solution streamlines the complete employee lifecycle, from organizational setup and employee onboarding to transfers, postings, leave administration, and workforce management.

The system enables efficient management of organizational structures, employee profiles, office assignments, designations, and Personal Data Sheets (PDS) while maintaining complete employee records and historical information. It also provides digital Employee ID Card generation with unique employee IDs, QR code-based verification, and secure printing capabilities to strengthen employee identification and authentication.

A configurable workflow engine supports employee information modifications, approvals, notifications, and request tracking, ensuring transparency and accountability throughout HR processes. Role-based access control allows administrators to manage users, assign permissions, and maintain system security, while executive dashboards provide real-time organizational insights for informed decision-making.

The integrated Leave Management module automates leave policy configuration, leave applications, approval workflows, leave calendars, and leave history tracking, enabling a transparent and efficient leave administration process. By eliminating manual operations and paper-based records, the solution improves operational efficiency, enhances data accuracy, strengthens governance, and supports seamless collaboration across departments. As part of the overall BSTI ERP ecosystem, it provides a secure, scalable, and future-ready platform that supports the organization's digital transformation objectives and long-term operational excellence.

Figure Name: HRM & Leave Management System Diagram

## Module-1: Organogram (Total Feature - 4)

**Features Description**

### 1. Create Office

Allows administrators to create and maintain organizational offices, branches, and regional units within the system.

### 2. Assign Office Address

Enables administrators to record and update the official address and contact information for each office.

### 3. Assign Bank Advice Details

Allows configuration of office-wise bank advice information required for salary and financial transaction processing.

### 4. Create Designation

Enables administrators to create and manage organizational designations and position hierarchies.

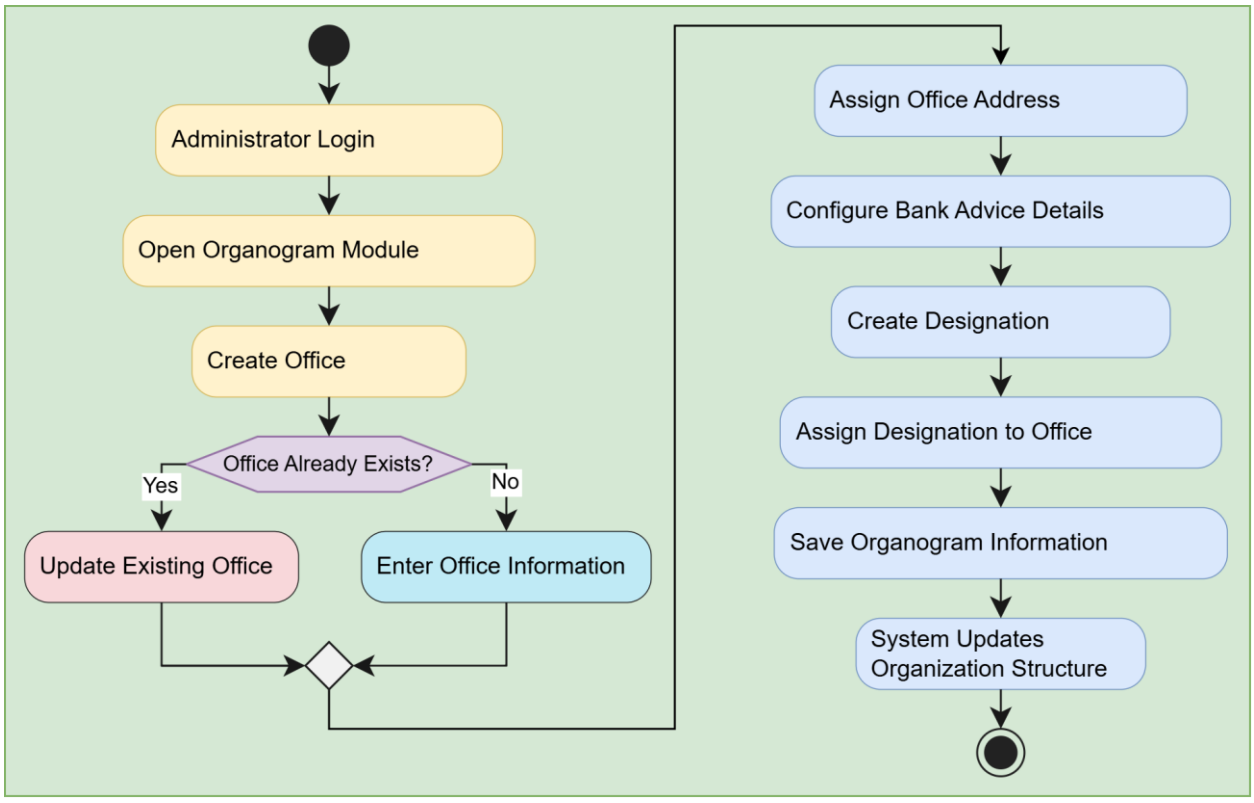

Fig: Organogram

## Module-2: Employee Management (Total Feature - 6)

**Features Description**

### 1. Employee Profile Creation and Management

Allows authorized users to create, maintain, and update employee profiles containing personal, official, and employment information.

### 2. Employee Search Filter

Provides search and filtering options to quickly locate employees using Employee ID, name, designation, office, or other criteria.

### 3. Employee Status Tracking (Active/Inactive)

Maintains the employment status of employees, allowing users to track active, inactive, retired, or resigned employees.

### 4. View Employee

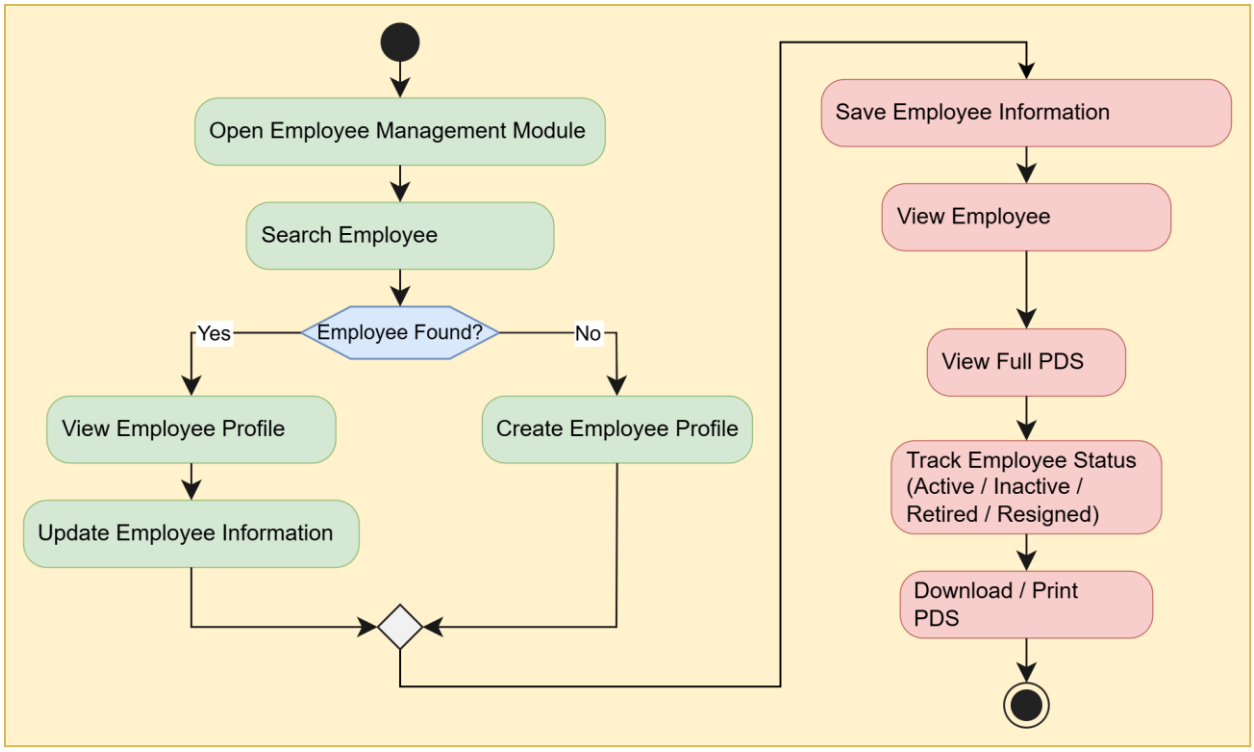

Allows authorized users to view employee profile information without modification privileges.

### 5. View Employee Full PDS

Provides access to the complete Personal Data Sheet (PDS) containing all employee information and employment records.

### 6. Download and Print Employee PDS in BSTI Format

Enables users to download and print the approved Personal Data Sheet in the prescribed BSTI format.

## Module-3: Employee Office Management (Total Feature - 5)

**Feature Description:**

### 1. Employee Office Assign

Allows administrators to assign employees to their respective offices or organizational units.

### 2. Employee Designation Assign

Enables assignment of employee designations based on approved organizational structures and positions.

### 3. Edit Employee Information

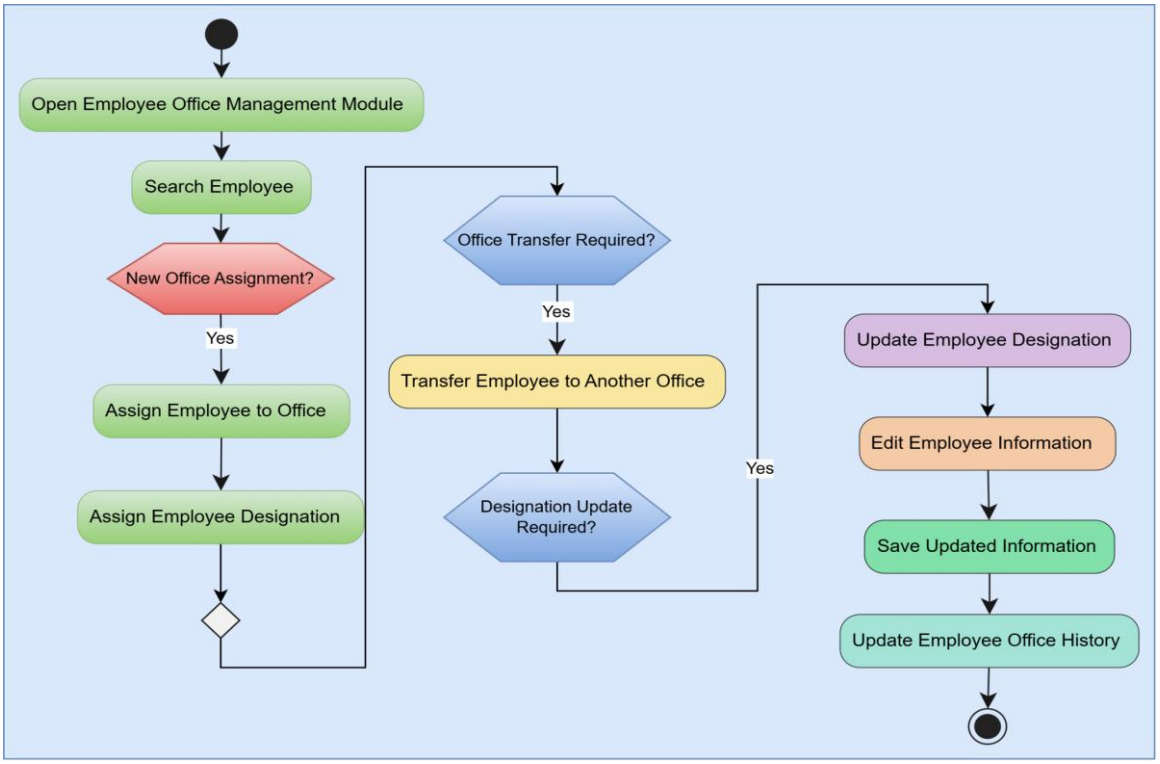

Allows authorized users to update employee official information while maintaining data accuracy.

### 4. Transfer Employees from One Office to Another

Supports employee transfer between offices while maintaining complete transfer history.

### 5. Update Employee Designation

Allows authorized users to update employee designations due to promotion, transfer, or administrative decisions.

## Module-4: ID Card Management (Total Feature - 8)

**Feature Description:**

### 1. Digital Employee ID Card Generation

Automatically generates digital employee identity cards using approved employee information.

### 2. Unique Employee ID Number Generation

Generates a unique identification number for each employee to ensure accurate identification.

### 3. Employee Photo, Designation, Department and Office Details on ID Card

Displays essential employee information, including photograph, designation, department, and office details on the ID card.

### 4. QR Code Generation for Each Employee

Generates a unique QR code for every employee to support secure identity verification.

### 5. QR Code Scanning for Employee Verification

Allows authorized users to scan employee QR codes for quick identity verification.

### 6. Display Verified Employee Information After Scanning QR Code

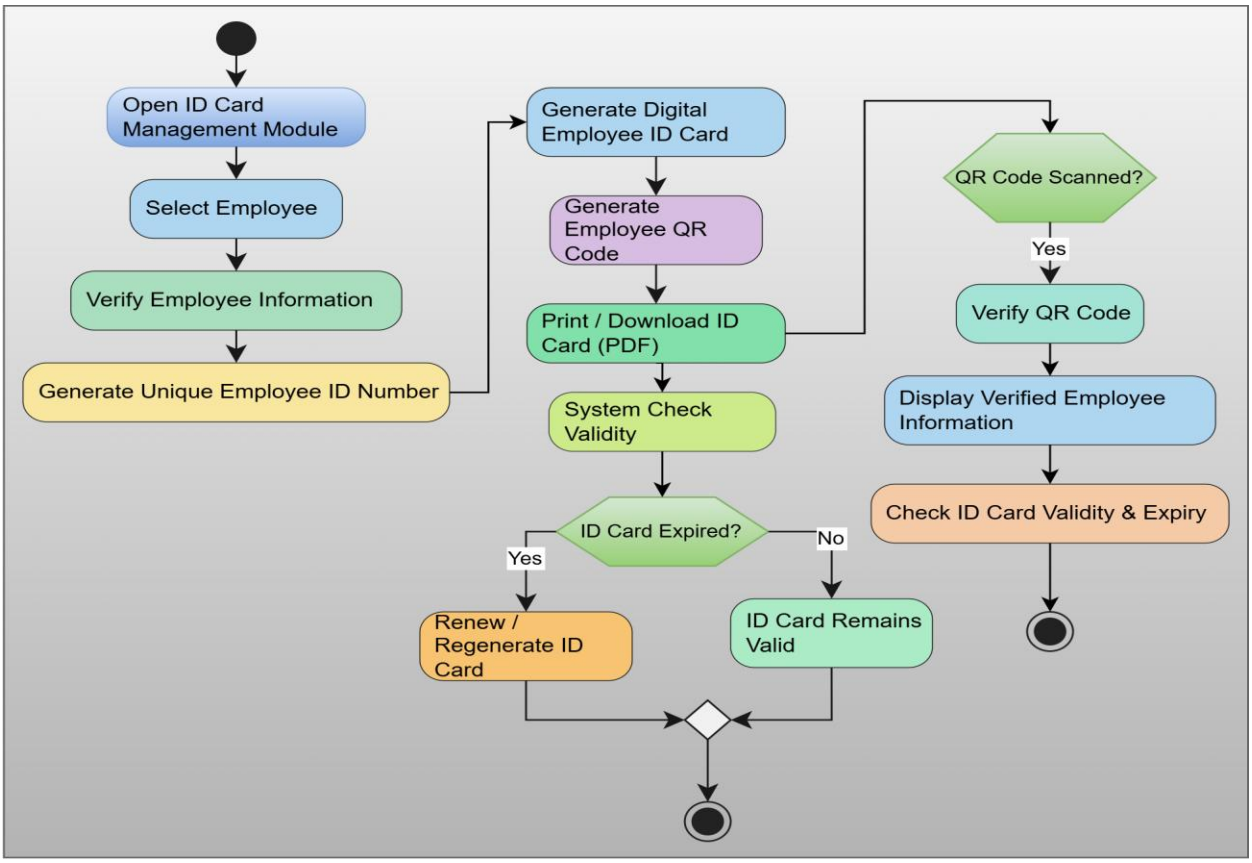

Displays verified employee details immediately after successful QR code scanning.

### 7. ID Card Print and Download in PDF Format

Enables employees and administrators to print or download ID cards in PDF format.

### 8. ID Card Validity Date and Expiry Management

Maintains ID card validity periods and manages renewal or expiry information.

## Module-5: PDS (Personal Data Sheet) (Total Feature - 4)

### Feature Description

### 1. Online Personal Data Sheet Form Submission

Allows employees to complete and submit their Personal Data Sheet electronically through the system.

### 2. Document Attachment Facility

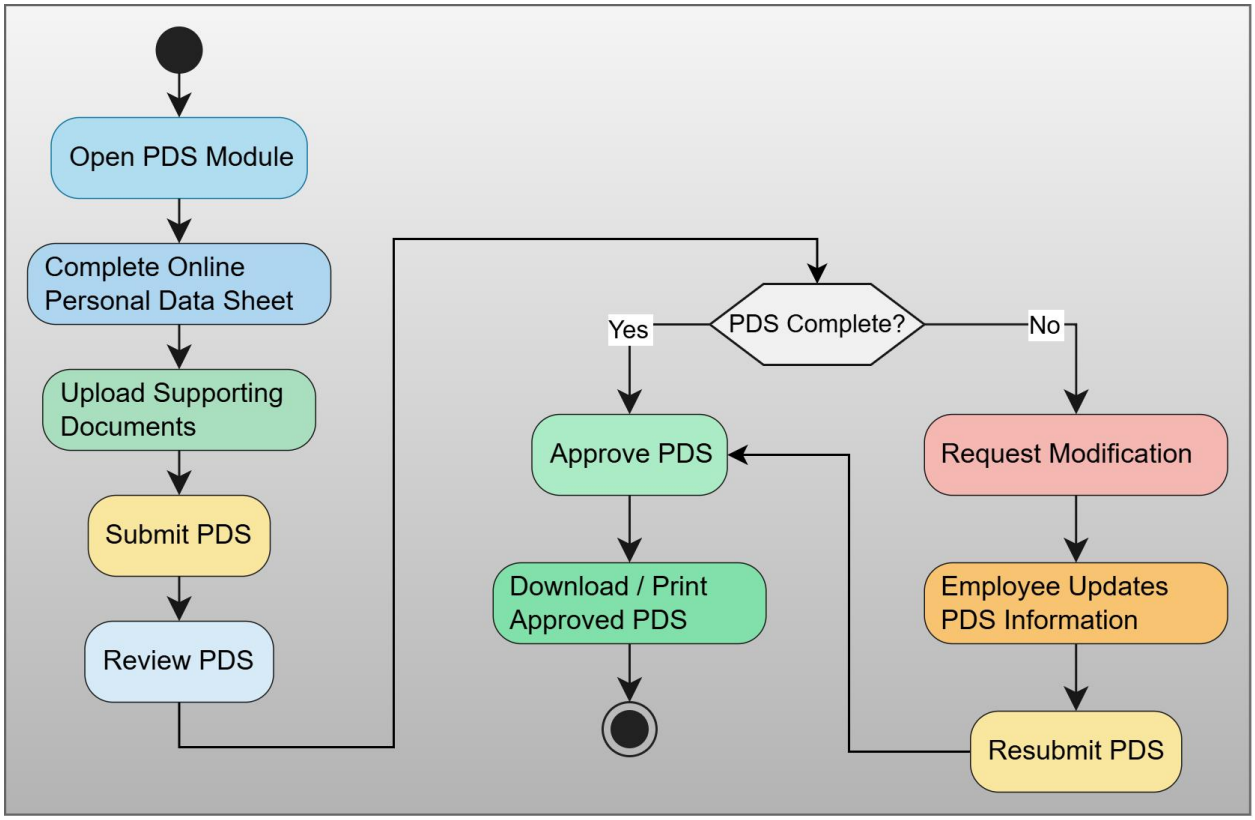

Enables employees to upload supporting documents required for PDS verification and approval.

### 3. PDS Review, Approval and Update Request Process

Supports a structured workflow for reviewing, approving, and requesting modifications to Personal Data Sheets.

### 4. PDS Download and Print in Approved Format

Allows approved Personal Data Sheets to be downloaded and printed in the prescribed organizational format.

## Module-6: Employee Modification with Dynamic Workflow (Total Feature - 5)

### Features Description

### 1. Employee Information Modification Request Submission

Allows employees or authorized users to submit requests for updating employee information through the system.

### 2. Forward, Return, Reject and Approve Options

Supports workflow actions including forwarding, returning, approving, or rejecting modification requests.

### 3. Comments and Remarks During Approval Process

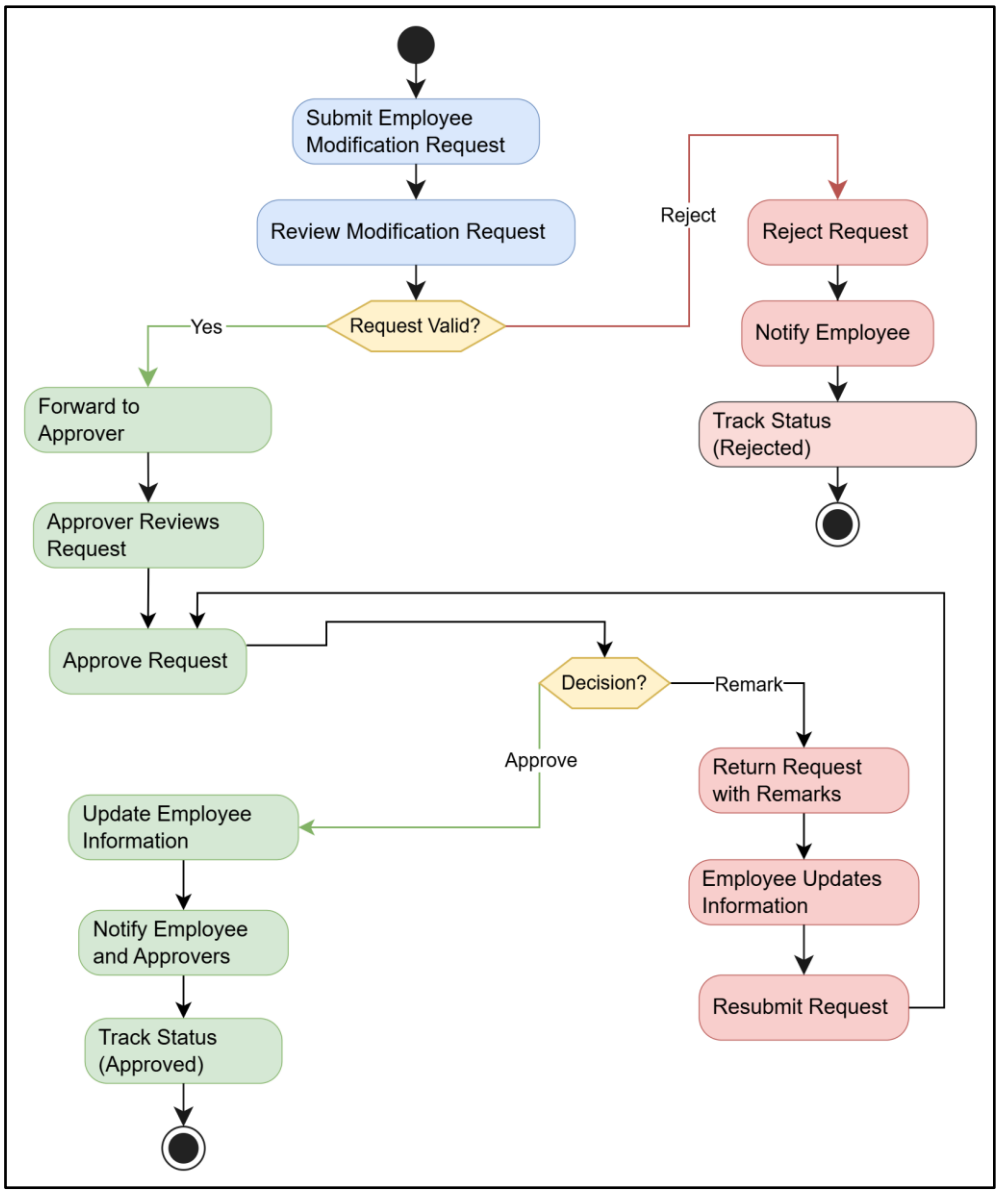

Allows reviewers and approvers to provide comments and remarks throughout the approval workflow.

### 4. Notification to Employee and Approvers

Automatically notifies employees and approvers about request submissions, approvals, rejections, and pending actions.

### 5. Pending, Approved, Rejected and Returned Request Tracking

Tracks the current status of modification requests throughout the approval process.

## Module-7: Users Module for Admin (Total Feature - 4)

**Features Description**

**1. User Role Assignment (Admin, HR, Director, Officer, Employee, etc.)**

Allows administrators to assign appropriate user roles based on organizational responsibilities.

**2. Module-wise Permission Setup**

Enables administrators to configure module-level access permissions for different user roles.

**3. View and Edit User Accounts**

Allows administrators to manage user account information, including updates and account maintenance.

### 4. Search Filter

Provides search and filtering options to quickly locate user accounts using various search criteria.

## Module-8: Reset User Password for Admin (Total Feature - 1)

**Features Description**

### 1. Admin Password Reset for Any User

Allows authorized administrators to securely reset passwords for users who have forgotten or require password recovery.

## Module-9: Director General (Total Feature -1)

**Feature Description**

### 1. Director General Dashboard with Organizational Summary

Provides the Director General with a centralized dashboard displaying key organizational statistics, employee information, and HR operational summaries.

## Module-10: Release and Assign (Total Feature - 4)

**Feature Description**

### 1. Transfer, Posting, Deputation and Attachment Management

Supports the management of employee transfers, postings, deputations, and attachments across organizational offices.

### 2. Release Date and Joining Date Management

Maintains employee release and joining dates to ensure accurate posting and transfer records.

### 3. Assign Employee to Designation, Department, Office and Reporting Authority

Allows administrators to assign employees to appropriate designations, departments, offices, and reporting supervisors.

### 4. Maintain Employee Posting and Transfer History

Maintains a complete history of employee postings, transfers, deputations, and assignments for future reference and audit purposes.

## Module-11: Leave Management (Total Feature - 7)

**Feature Description**

### 1. Employee Dashboard

Provides employees with a personalized dashboard displaying leave balances, pending requests, approval status, upcoming holidays, and leave history.

### 2. Leave Calendar

Displays an organizational leave calendar showing approved leaves, public holidays, weekends, and employee leave schedules for effective planning.

### 3. Create Leave

Allows administrators to create and configure different leave policies, leave rules, and leave categories as per organizational requirements.

### 4. Leave Type

Enables the management of various leave types, such as Casual Leave, Sick Leave, Earned Leave, Maternity Leave, and other organization-specific leave categories.

### 5. Leave Application

Allows employees to apply for leave online by selecting the leave type, duration, and providing the necessary supporting information or documents.

### 6. Dynamic Approval Workflow

Supports a configurable multi-level approval workflow for leave requests based on the organization's reporting hierarchy and approval policies.

### 7. Leave History Tracking

Maintains a complete record of employee leave applications, approvals, rejections, cancellations, and leave balances for reporting and audit purposes.

## Service-2: Payroll Management

The proposed Payroll Management Solution is a comprehensive module of the BSTI Enterprise Resource Planning (ERP) system, designed to automate and streamline end-to-end payroll operations through a centralized, secure, and workflow-driven platform. The solution manages the complete payroll lifecycle, including salary structure configuration, pay scale management, salary fixation, payroll processing, bonus management, and employee financial records while ensuring compliance with organizational policies and government regulations.

The system supports flexible configuration of earnings, deductions, allowances, payroll heads, and calculation rules, enabling accurate salary processing for individual employees and offices. It also automates the generation of bank advice, salary sheets, payslips, salary certificates, income tax statements, and journal vouchers with integrated approval workflows, digital authorization, and comprehensive reporting capabilities.

An integrated payroll accounts module securely maintains employee banking and payroll-related information, while salary month locking prevents unauthorized modifications after payroll completion, ensuring data integrity and financial accuracy. The solution also includes a robust Loan Management module that supports eligibility verification, loan application processing, multi-level approvals, disbursement, repayment scheduling, payroll-based installment deductions, loan statements, audit trails, and analytical reporting.

By integrating payroll, taxation, accounting, banking, and loan management into a single platform, the solution eliminates manual processing, improves payroll accuracy, strengthens financial governance, and enhances operational efficiency. As part of the BSTI ERP ecosystem, it provides a scalable, transparent, and future-ready payroll management platform that supports digital transformation, regulatory compliance, and efficient financial administration across the organization.

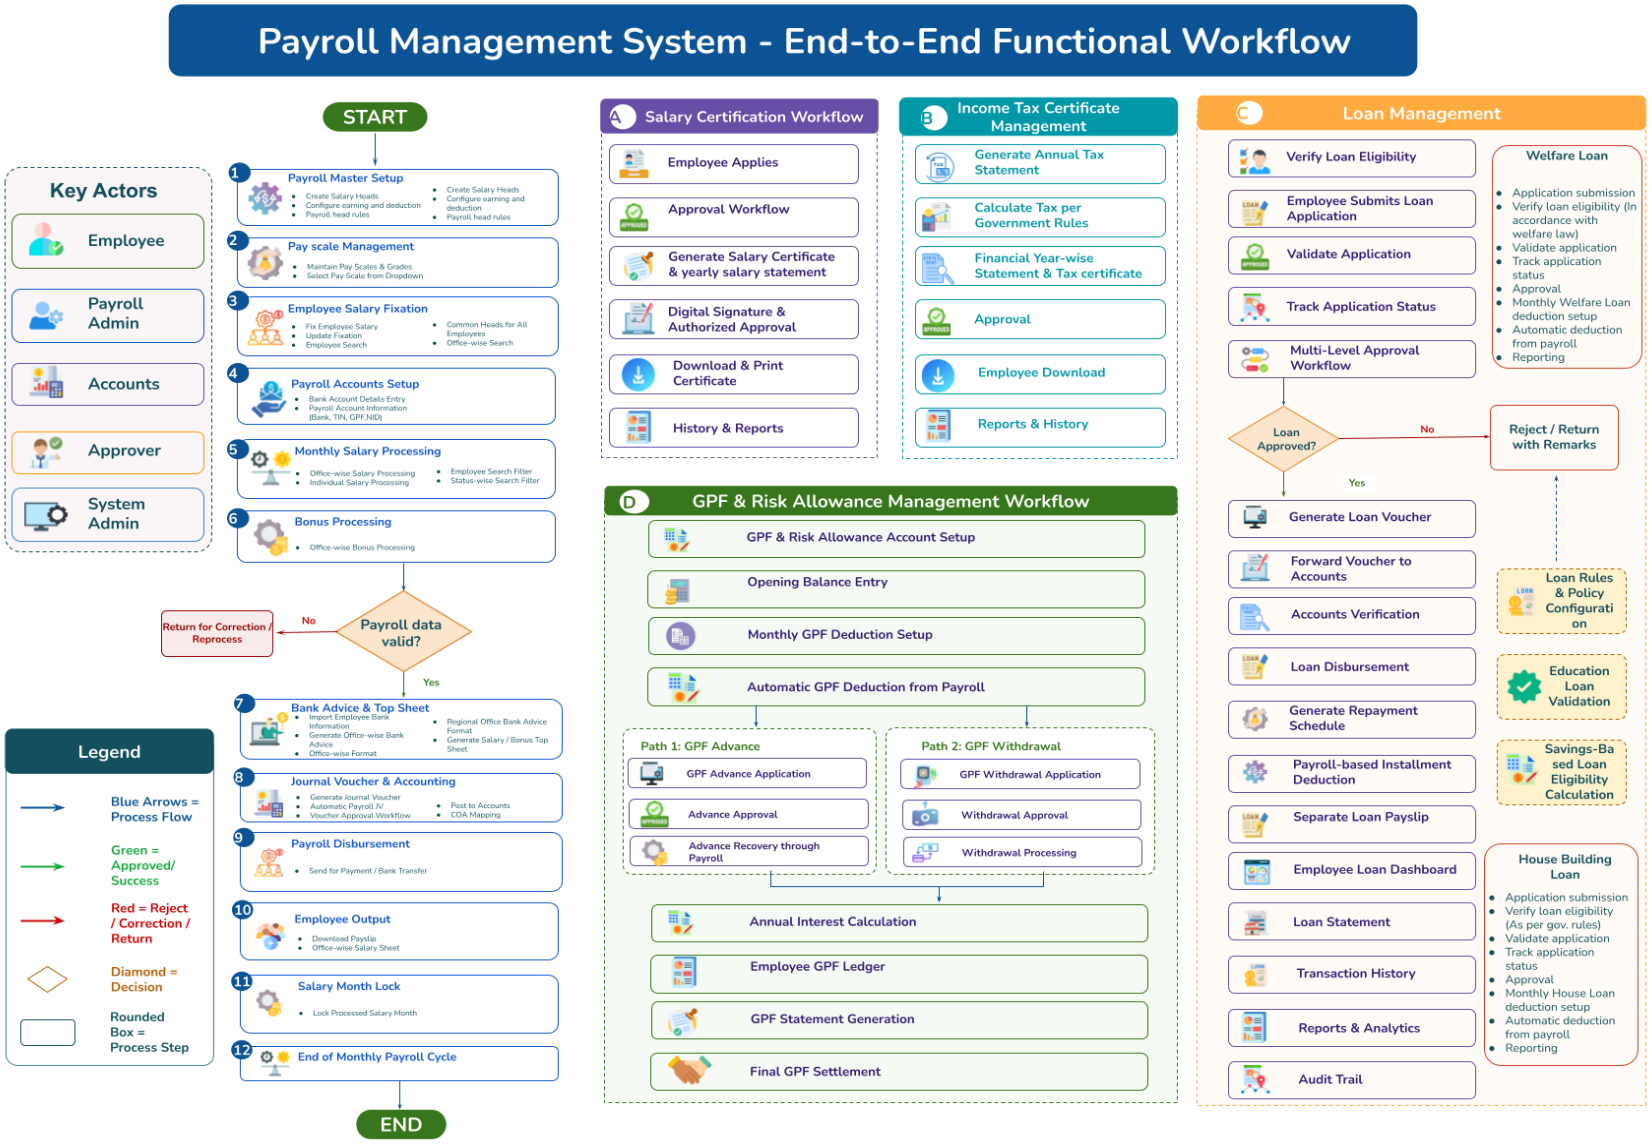

Figure Name: Payroll Management

## Module-1: Regular Salary – Earnings/Deductions (Total Feature - 6)

**Features Description**

**1. Create & Manage Salary Heads**

Allows administrators to create, update, and manage salary components such as earnings and deductions used in payroll processing.

**2. Earnings & Deductions Setup**

Enables configuration of various earning and deduction components according to organizational payroll policies.

**3. Payroll Head Configuration**

Allows administrators to configure payroll heads and define their calculation methods and applicable rules.

**4. Fixed & Percentage Calculation**

Supports salary components calculated as fixed amounts or percentages based on predefined payroll rules.

**5. Allowance Configuration Setup**

Enables the creation and management of different allowance types applicable to employees based on organizational policies.

**6. Deduction Configuration Setup**

Allows administrators to configure statutory and organizational deductions such as tax, provident fund, and loan deductions.

## Module-2: Payroll Pay Scale (Total Feature - 2)

**Features Description**

**1. Pay Scale Management**

Enables administrators to create, maintain, and update government-approved pay scales, grades, and salary structures.

**2. Pay Scale Selection from Dropdown**

Allows users to select the appropriate pay scale from a predefined dropdown list during employee salary configuration.

## Module-3: Salary Fixation (Total Feature - 5)

## Features Description

**1. Employee Salary Fixation**

Enables administrators to assign and fix an employee's salary based on the approved pay scale, grade, and applicable allowances.

**2. Salary Fixation Update**

Allows authorized users to revise employee salary fixation due to promotion, increment, or policy changes while maintaining history.

### 3. Common Head Implementation for All Employees

Provides the facility to apply common salary heads and payroll components across all employees to ensure uniform payroll processing.

### 4. Office-wise Search Filter

Allows users to search and filter salary fixation records based on office or organizational unit for efficient management.

### 5. Employee Search Option

Provides a search facility to quickly locate employee salary fixation records using employee ID, name, or other search criteria.

## Module-4: Salary Process (Total Feature - 4)

**Features Description**

### 1. Office-wise Salary Processing

Enables authorized users to process monthly salaries for all employees within a selected office in a single operation based on approved payroll data.

### 2. Individual Salary Processing

Allows salary processing for individual employees to accommodate corrections, adjustments, or special payroll requirements.

### 3. Employee Search Filter

Provides a search facility to locate employees using Employee ID, name, designation, or other predefined search criteria during salary processing.

### 4. Status-wise Search Filter

Allows users to filter salary records based on processing status, such as Pending, Processed, Approved, or Locked, for efficient payroll management.

## Module-5: Bonus Process (Total Feature - 1)

**Feature Description**

### 1. Office-wise Bonus Processing

Enables authorized users to calculate and process bonus payments for all eligible employees within a selected office based on predefined bonus policies.

## Module-6: Bank Advice (Salary/Bonus) (Total Feature - 3)

**Features Description**

### 1. Employee Bank Information Import

Allows the system to import employee bank account details required for salary and bonus disbursement through electronic bank transfer.

### 2. Regional Office Bank Advice Format

Generates bank advice in the prescribed format required by regional offices to facilitate salary and bonus payment processing.

### 3. Office-wise Bank Advice Generation

Enables the generation of office-specific bank advice containing employee payment details for submission to the designated bank.

## Module-7: Top Sheet (Salary/Bonus) (Total Feature - 2)

**Features Description**

### 1. Office-wise Salary Sheet for Employees

Generates office-wise salary and bonus top sheets containing employee-wise payment details for review, approval, and financial processing.

### 2. Office-wise Format Implementation

Supports predefined office-specific top sheet formats to ensure compliance with organizational and government reporting requirements.

## Module-8: Salary Certification (Total Feature - 6)

**Features Description**

### 1. Salary Certificate Application

Allows employees to submit requests for salary certificates through the system for official purposes.

### 2. Salary Certificate Approval Workflow

Supports a multi-level approval process to review and authorize salary certificate requests before issuance.

### 3. Salary Certificate Generation

Automatically generates salary certificates using approved employee payroll information and predefined templates.

### 4. Digital Signature & Authorized Approval

Enables authorized officials to digitally sign and approve salary certificates for official use.

### 5. Download & Print Salary Certificate

Allows employees to securely download and print approved salary certificates from the employee portal.

### 6. Salary Certificate History & Reports

Maintains a history of issued salary certificates and generates reports for monitoring and audit purposes.

## Module-9: Income Tax Statement (Total Feature - 8)

**Features Description**

### 1. Annual Income Tax Statement Generation

Automatically generates annual income tax statements based on employee earnings and deductions for the selected financial year.

### 2. Income & Tax Deduction Summary

Provides a consolidated summary of employee income, taxable earnings, and tax deductions for reporting purposes.

### 3. Tax Calculation Based on Government Tax Rules

Calculates income tax according to the applicable government tax regulations and approved tax slabs.

### 4. Financial Year-wise Tax Statement

Generates income tax statements separately for each financial year to support tax filing and record management.

### 5. Employee Tax Statement Download

Allows employees to securely view and download their income tax statements from the employee portal.

### 6. Tax Statement Approval

Supports the review and approval of generated tax statements by authorized officials before issuance.

### 7. Income Tax Reports

Generates comprehensive income tax reports for employees, departments, and organizational reporting requirements.

### 8. Tax Statement History

Maintains historical records of employee income tax statements for future reference, compliance, and audit purposes.

## Module-10: Journal Voucher (Total Feature - 9)

### Features Description

### 1. Journal Voucher Generation

Automatically generates journal vouchers from payroll transactions for financial accounting and record-keeping.

### 2. Automatic Payroll Journal Voucher

Creates payroll-related journal vouchers automatically after successful salary processing, reducing manual accounting effort.

### 3. Chart of Accounts Mapping

Maps payroll transactions to the appropriate Chart of Accounts (COA) to ensure accurate financial posting.

### 4. Voucher Approval Workflow

Supports a configurable approval workflow for reviewing and authorizing journal vouchers before posting.

### 5. Voucher Posting to Accounts

Allows approved journal vouchers to be posted to the accounting system for financial reconciliation and reporting.

### 6. Voucher Search & View

Provides search and filtering options to quickly locate and review journal vouchers using various criteria.

### 7. Journal Voucher Printing/PDF

Enables users to generate and print journal vouchers or export them in PDF format for official documentation.

### 8. Journal Voucher Reports

Generates reports on journal vouchers, including posting status, transaction summaries, and financial records.

### 9. Journal Voucher Audit Trail

Maintains a complete history of journal voucher creation, approval, modification, and posting activities to support audit and compliance requirements.

## Module-11: Payroll Accounts (Total Feature - 2)

**Features Description**

### 1. Bank Account Details Entry for Employee

Allows authorized users to record and maintain employee bank account information required for salary, bonus, and other payroll-related payments.

### 2. Employee Payroll Account Information Management

Enables administrators to maintain employee payroll-related information, including Bank Account Number, TIN, GPF details, and other financial records required for payroll processing.

## Module-12: Salary Month Lock (Total Feature - 1)

**Features Description**

### 1. Lock Processed Salary Month

Allows authorized users to lock a processed payroll month to prevent further modifications, ensuring payroll accuracy and maintaining financial integrity.

## Module-13: Download Payslip (Total Feature - 1)

**Features Description**

### 13.1 Office-wise Salary Sheet Download

Enables authorized users to download office-wise salary sheets and payslips in the prescribed format for record-keeping and distribution.

## Module-14: Loan Management (Total Feature - 22)

**Features Description**

### 1. Employee Loan Eligibility Verification

Automatically verifies employee loan eligibility based on organizational policies, savings balance, salary criteria, age, and other predefined conditions.

### 2. Loan Application Submission

Allows eligible employees to apply for loans electronically by submitting the required information through the employee portal.

### 3. Loan Application Validation

Validates loan application details against predefined eligibility rules before forwarding the application for approval.

### 4. Loan Application Status Tracking

Provides employees with real-time visibility into the current status of their loan applications throughout the approval process.

### 5. Multi-Level Loan Approval Workflow

Supports a configurable multi-level approval process to review, approve, reject, or return loan applications.

### 6. Loan Approval and Rejection Management

Allows authorized officials to approve or reject loan applications with remarks based on organizational loan policies.

### 7. Loan Voucher Generation

Automatically generates a loan voucher after successful approval of the loan application for financial processing.

### 8. Voucher Forwarding to Accounts

Forwards the approved loan voucher to the Accounts section for verification and loan disbursement processing.

### 9. Accounts Verification

Enables the Accounts section to verify approved loan vouchers before releasing the loan amount.

### 10. Loan Disbursement Management

Processes approved loans and facilitates the disbursement of loan amounts to the employee's registered bank account.

### 11. Loan Repayment Schedule Management

Automatically generates the loan repayment schedule, including installment amount, repayment period, and due dates.

### 12. Loan Installment Deduction Management

Supports automatic deduction of loan installments from the employee's monthly salary based on the approved repayment schedule.

### 13. Payroll Integration for Loan Deduction

Integrates loan deductions with the payroll system to ensure accurate salary calculation and payment processing.

### 14. Separate Loan Payslip Generation

Generates a dedicated loan payslip showing loan disbursement and repayment details separately from the regular salary payslip.

### 15. Employee Loan Dashboard

Provides employees with a centralized dashboard displaying loan details, outstanding balance, repayment schedule, and current loan status.

### 16. Loan Statement Management

Allows employees to view and download detailed loan statements, including repayment history and outstanding balances.

### 17. Loan Transaction History

Maintains a complete record of all loan-related transactions, including disbursements, repayments, and adjustments.

### 18. Loan Rules and Policy Configuration

Allows administrators to configure loan eligibility rules, loan limits, repayment policies, and other organizational loan settings.

### 19. Education Loan Validation

Validates education loan applications by ensuring eligibility criteria, including the beneficiary's age, comply with organizational policies.

### 20. Savings-Based Loan Eligibility and Calculation

Automatically calculates the maximum eligible loan amount based on the employee's savings balance and applicable loan policies.

### 21. Loan Reports and Analytics

Generates comprehensive reports on loan applications, approvals, disbursements, repayments, outstanding balances, and loan utilization.

### 22. Loan Audit Trail and Activity Log

Maintains a complete audit trail of all loan-related activities, including applications, approvals, disbursements, repayments, and user actions for compliance and accountability.

## Module-15: GPF (General Provident Fund)(Total Feature-12)

### Features Description

**1. GPF Account Setup**

Creates and maintains employee-wise GPF accounts with essential account information.

**2. Opening Balance Entry**

Records the opening GPF balance for employees during account initialization or migration.

**3. Monthly GPF Deduction Setup**

Configures employee-wise monthly GPF subscription amounts for payroll processing.

**4. Automatic GPF Deduction from Payroll**

Automatically deducts the configured GPF contribution from employee salaries during payroll processing.

**5. GPF Advance Application**

Allows employees to submit applications for GPF advances through the system.

**6. GPF Advance Approval**

Supports the review, approval, or rejection of GPF advance applications through the defined workflow.

**7. Advance Recovery Management**

Manages the recovery of approved GPF advances through scheduled payroll deductions.

**8. GPF Withdrawal Management**

Facilitates the application, approval, and processing of eligible partial or final GPF withdrawals.

**9. Annual Interest Calculation**

Automatically calculates and applies annual interest on employee GPF balances based on the configured rate.

**10. Employee GPF Ledger**

Maintains a detailed ledger of all GPF transactions, including contributions, advances, recoveries, withdrawals, and interest.

**11. GPF Statement Generation**

Generates employee-wise GPF statements showing contributions, interest, withdrawals, recoveries, and current balance.

**12. Final GPF Settlement**

Processes the final settlement of GPF accounts upon retirement, resignation, or other eligible separation cases.

## Service-3: Finance & Accounts Management

This document outlines the proposed Finance & Accounts Management System for the Bangladesh Technical Framework (BTF). It defines the functional scope and key business capabilities required to establish a centralized, transparent, and efficient financial management platform.

The proposed solution covers the end-to-end financial management process, including budgeting, income and expense management, accounting, payment processing, payroll integration, reporting, and access control. The following sections describe the functional scope and implementation requirements of each module in detail.

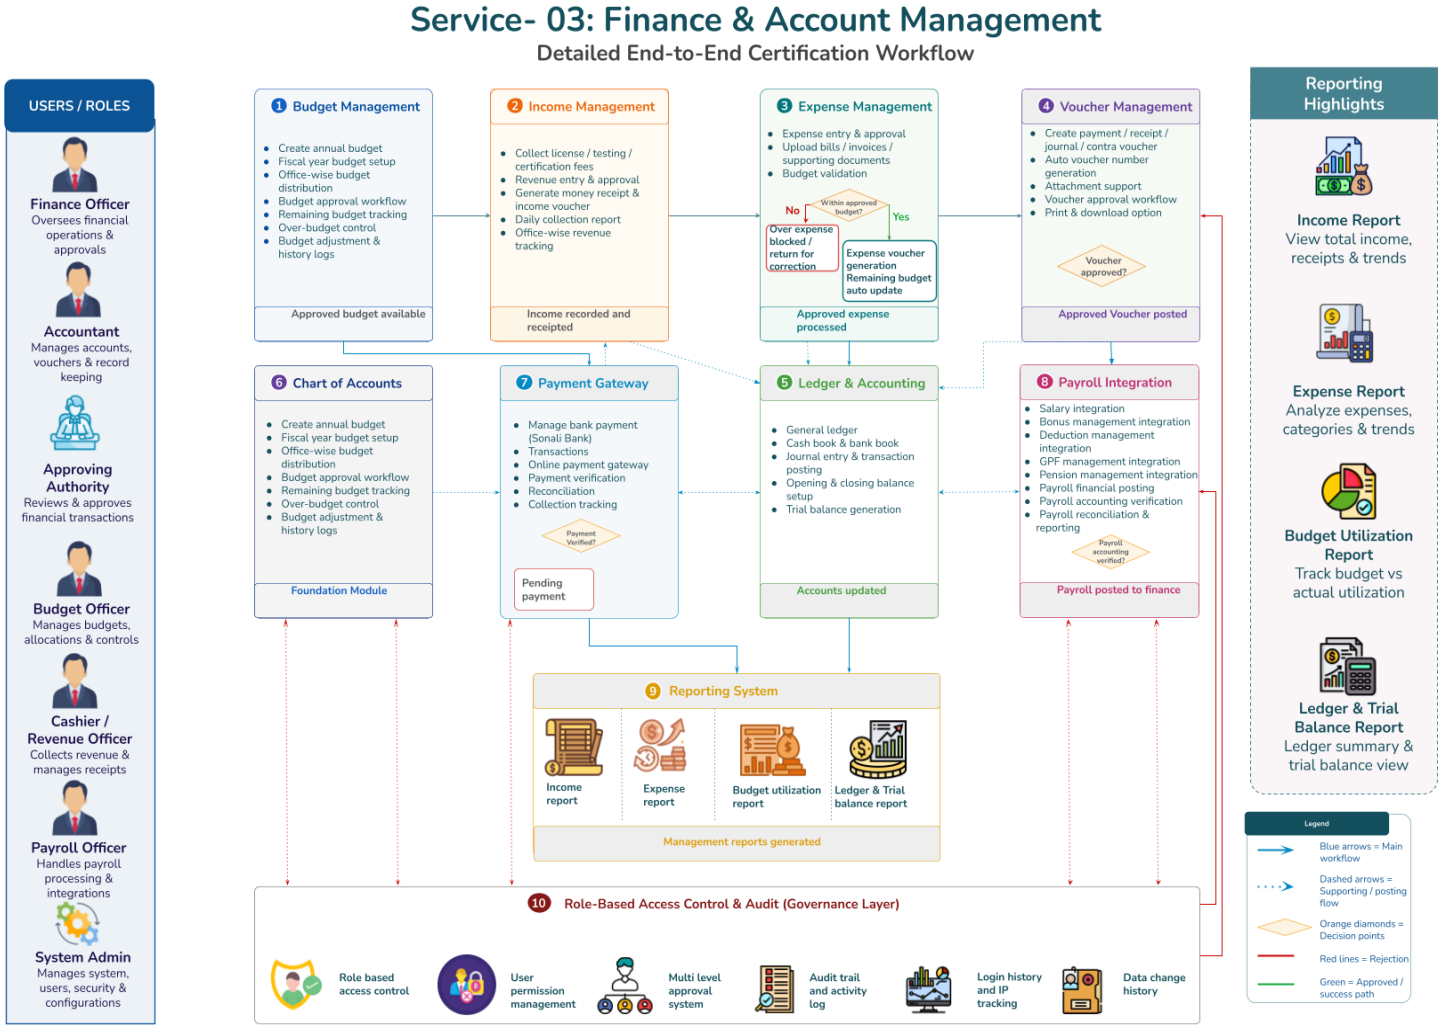

Figure Name: Workflow of Finance & Account Management Service

## Module - 1: Budget Management Module (Total Feature - 7)

The Budget Management Module is designed to facilitate annual budget planning, allocation, approval, utilization monitoring, and budget control. It ensures efficient financial planning, prevents overspending, and supports transparent budget management across the organization.

This module enables finance personnel to prepare annual budgets, allocate funds to different offices, monitor budget utilization, control expenditures within approved limits, and maintain budget revision history. The module supports structured financial planning and strengthens budget governance.

**Features Description**

**1. Budget Creation & Allocation**

Allows authorized users to create annual budgets and allocate funds to different offices, departments, or activities based on approved financial plans.

**2. Office-wise Budget Distribution**

Enables budget allocation and distribution to individual offices according to approved budget limits.

**3. Budget Approval Workflow**

Supports a multi-level approval process for budget creation, allocation, and revision before implementation.

**4. Remaining Budget Tracking**

Provides real-time tracking of available and utilized budgets to monitor remaining funds throughout the fiscal year.

**5. Over Budget Control**

Prevents transactions that exceed the approved budget limit unless authorized by designated officials.

**6. Fiscal Year Budget Setup**

Allows administrators to configure budgets for each fiscal year based on organizational financial policies.

**7. Budget Adjustment & History Logs**

Maintains records of budget revisions, reallocations, and adjustment history for transparency and audit purposes.

## Module 2: Income Management (Total Feature - 5)

The Income Management Module is designed to manage organizational revenue collection, accurately record income transactions, generate official receipts, and ensure proper accounting of all income sources. This module centralizes all revenue collection activities, including licence fees, testing fees, certification fees, and other income sources. It ensures accurate recording, approval, receipt generation, and financial reporting of revenue transactions.

**Features Description**

**1. License, Testing & Certification Fee Collection**

Records revenue collected from licensing, testing, certification, and other BSTI services.

**2. Revenue Entry & Approval**

Allows authorized users to record revenue transactions and process them through an approval workflow.

**3. Money Receipt & Income Voucher Generation**

Automatically generates money receipts and income vouchers for completed revenue transactions.

**4. Daily Collection Report**

Generates daily reports summarizing income collected from all offices and service categories.

**5. Office-wise Revenue Tracking**

Tracks revenue collection separately for each office to support financial monitoring and reporting.

## Module-3: Expense Management (Total Feature - 6)

The Expense Management Module is designed to manage organizational expenses through a structured approval process while ensuring that expenditures remain within the approved budget limits. This module enables finance personnel to record expenses, upload supporting documents, validate available budgets, generate expense vouchers, and automatically update the remaining budget after approved transactions.

**Features Description**

**1. Expense Entry & Approval**

Allows authorized users to record expenses and submit them through the approval workflow.

**2. Budget Validation**

Verifies expense requests against the available approved budget before processing.

**3. Over Expense Blocking**

Restricts expense transactions that exceed the approved budget allocation.

**4. Bill/Document Upload**

Enables users to upload bills, invoices, and supporting documents for expense verification.

**5. Expense Voucher Generation**

Automatically generates expense vouchers after successful approval of expense transactions.

**6. Remaining Budget Auto Update**

Automatically updates the remaining budget after approved expenses are processed.

## Module - 4: Ledger & Accounting (Total Feature - 5)

The Ledger & Accounting Module is designed to maintain accurate accounting records and ensure proper financial transaction management. This module records all financial transactions, maintains general ledger accounts, manages cash and bank books, processes journal entries, and generates trial balance reports.

**Features Description**

**1. General Ledger**

Maintains all financial transactions in the General Ledger for accurate accounting and financial reporting.

**2. Cash Book & Bank Book**

Records cash and bank transactions separately to support daily financial operations and reconciliation.

**3. Journal Entry & Transaction Posting**

Allows authorized users to create journal entries and post financial transactions to the ledger.

**4. Opening & Closing Balance Setup**

Maintains opening and closing balances for each financial period to ensure accurate accounting records.

**5. Trial Balance Generation**

Generates trial balance reports to verify the accuracy of financial transactions and ledger balances.

## Module - 5: Voucher Management Module (Total Feature - 5)

The Voucher Management Module is designed to manage financial vouchers through standardized workflows and approval processes.

This module manages payment, receipt, journal, and contra vouchers with automatic numbering, approval workflow, document attachment, and printing facilities.

**Features Description**

**1. Payment / Receive / Journal / Contra Voucher**

Supports the creation and management of payment, receipt, journal, and contra vouchers for financial transactions.

**2. Auto Voucher Number Generation**

Automatically generates unique voucher numbers for every financial transaction.

**3. Voucher Approval Workflow**

Supports a configurable approval process for reviewing and approving vouchers before posting.

**4. Attachment Support**

Allows users to attach bills, invoices, and supporting documents to vouchers for verification.

**5. Print & Download Option**

Enables users to print or download approved vouchers in PDF format for official records.

## Module - 6: Chart of Accounts (Total Feature - 5)

The Chart of Accounts Module is designed to maintain a standardized financial account structure for accurate accounting and reporting.

This module allows administrators to define account heads, organize hierarchical account structures, and map accounts to the general ledger.

**Features Description**

**1. Account Head Management**

Allows administrators to create, update, and manage financial account heads used in accounting transactions.

**2. Parent & Child Account Structure**

Supports hierarchical account structures by maintaining parent and child account relationships.

**3. Income / Expense / Asset / Liability Setup**

Allows configuration of account categories based on standard accounting classifications.

**4. Auto Account Code Generation**

Automatically generates unique account codes for newly created account heads.

**5. General Ledger Mapping**

Maps account heads to the General Ledger for accurate financial transaction posting.

## Module - 7: Payment Gateway (Total Feature - 6)

The Payment Gateway Module is designed to integrate online banking services for secure and efficient payment processing. This module supports bank integration, online payment processing, payment verification, reconciliation, and collection tracking.

**Features Description**

**1. Manage Bank Payment (Sonali Bank)**

Supports integration with Sonali Bank for secure processing of financial transactions.

**2. Transactions**

Records and manages all online payment transactions processed through the payment gateway.

**3. Online Payment Gateway**

Enables secure online payment collection through integrated payment gateway services.

**4. Payment Verification**

Verifies successful payment transactions before updating financial records.

**5. Reconciliation**

Performs reconciliation between payment gateway transactions and accounting records.

**6. Collection Tracking**

Tracks payment collections and transaction status for financial monitoring and reporting.

## Module - 8: Payroll Integration (Total Feature - 8)

The Payroll Integration Module is designed to integrate payroll operations with the financial accounting system. This module synchronizes salary, bonuses, deductions, pension, and GPF information with financial records to ensure accurate payroll accounting.

**Features Description**

**1. Salary Integration**

Integrates payroll salary transactions with the financial accounting system.

**2. Bonus Management Integration**

Synchronizes employee bonus transactions with the accounting module.

**3. Deduction Management Integration**

Transfers payroll deductions to the accounting system for accurate financial recording.

**4. GPF Management Integration**

Integrates General Provident Fund (GPF) transactions with the finance module.

**5. Pension Management Integration**

Supports integration of pension-related financial transactions with accounting records.

**6. Payroll Financial Posting**

Automatically posts payroll transactions to the appropriate accounting ledgers.

**7. Payroll Accounting Verification**

Allows verification of payroll accounting entries before final posting to financial records.

**8. Payroll Reconciliation & Reporting**

Generates payroll reconciliation reports to verify payroll transactions and financial balances.

## Module - 9: Reporting System (Total Feature - 4)

**Feature Description**

**1. Income Report**

Generates detailed reports on revenue collected from various organizational services.

**2. Expense Report**

Provides reports summarizing approved expenses across offices and departments.

**3. Budget Utilization Report**

Displays allocated, utilized, and remaining budget information for effective financial monitoring.

**4. Ledger & Trial Balance Report**

Generates General Ledger and Trial Balance reports to support financial analysis and auditing.

## Module - 10: Role-Based Access Control & Audit (Total Feature - 6)

**Feature Description**

**1. Role-Based Access Control**

Provides system access based on user roles and assigned responsibilities.

**2. User Permission Management**

Allows administrators to configure module-wise permissions for different user roles.

**3. Multi-Level Approval System**

Supports configurable multi-level approval workflows for financial transactions and documents.

**4. Audit Trail & Activity Logs**

Maintains a complete history of user activities, approvals, and financial transactions for audit purposes.

**5. Login History & IP Tracking**

Records user login history, login timestamps, and IP addresses to enhance system security.

**6. Data Change History**

Tracks all data modifications, including previous and updated values, to ensure accountability and compliance.

## Service-4: Case Management System

The Case Management System is a comprehensive digital solution designed to manage the complete lifecycle of regulatory and legal cases initiated by BSTI, from case registration to final disposal. The system enables authorized officials to register cases by capturing complainant details, accused information, offence details, applicable laws, evidence, and supporting documents. Each case is assigned a unique Case ID to ensure traceability and efficient monitoring throughout its lifecycle. Authorized officers can assign cases to investigators or responsible officials, schedule hearings, maintain investigation records, upload evidence, and record legal proceedings. The system supports hearing management, court order recording, penalty and fine management, imprisonment records, and case status tracking. Workflow-based approvals ensure that case-related activities are reviewed and approved by designated authorities before progressing to the next stage. Automated notifications keep concerned stakeholders informed regarding hearing schedules, document submissions, approvals, and final decisions. Comprehensive reporting and dashboard facilities provide real-time insights into pending, ongoing, and disposed cases for effective monitoring and decision-making. Role-based access control ensures secure access for investigators, legal officers, magistrates, directors, and administrators while maintaining complete audit trails of all activities. The system improves transparency, accountability, operational efficiency, and compliance by replacing manual case handling with a centralized, secure, and fully digital case management platform.

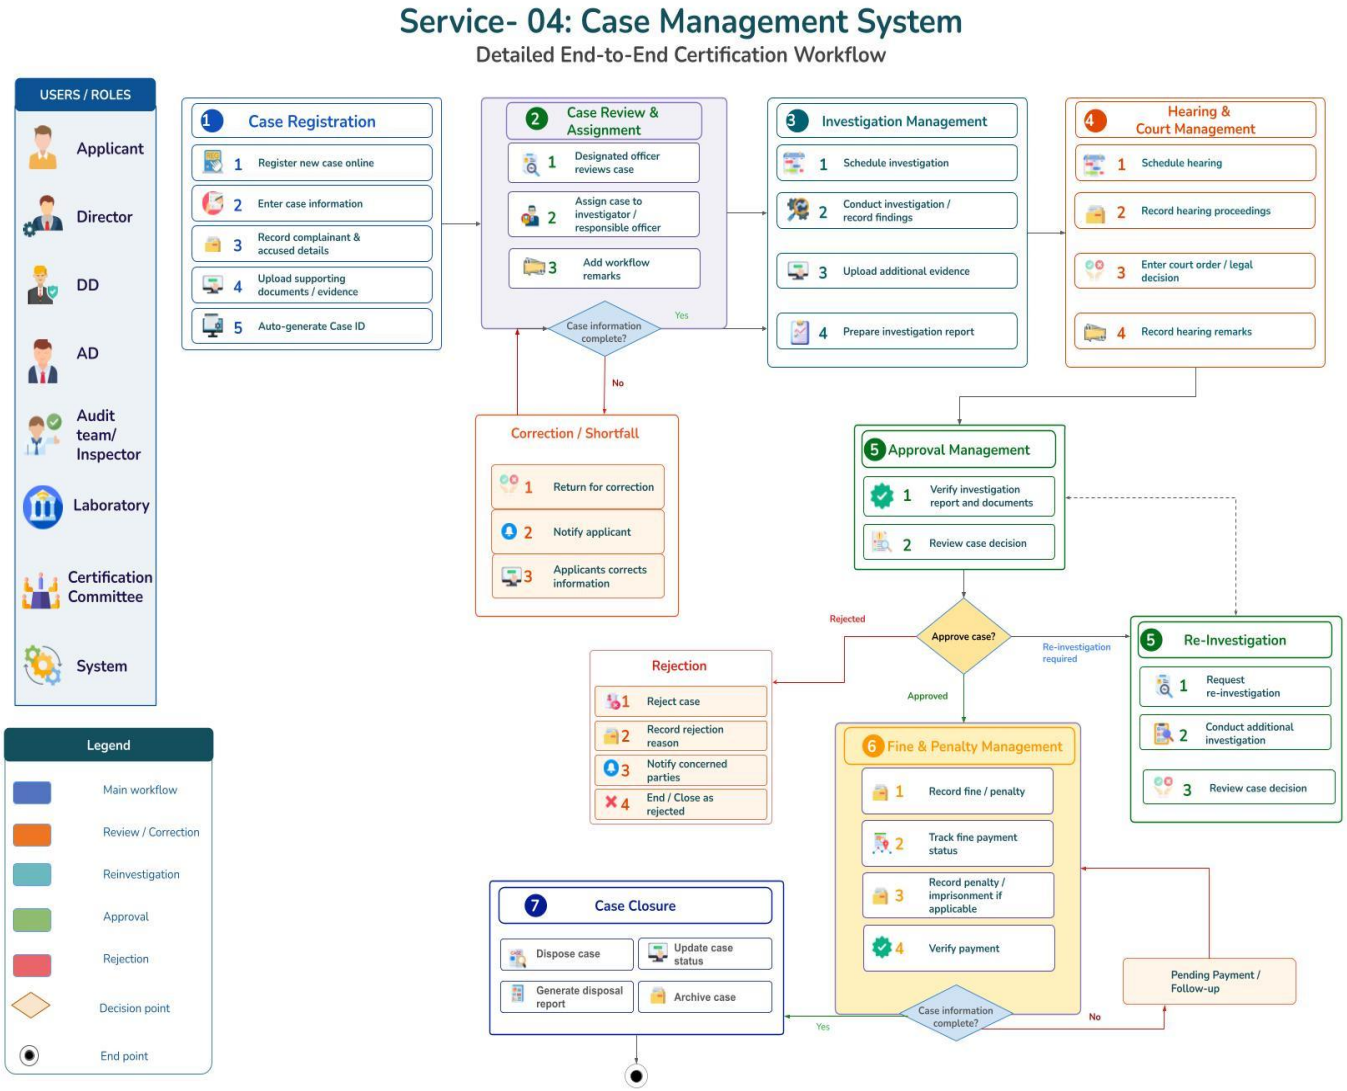

Figure Name: Workflow of Case Management Service

## Module-1: Case Registration (Total Feature - 5)

**Feature Description**

**1. Online Case Registration**

Allows authorized users to register new cases by entering all required case information through the system.

**2. Case Information Entry**

Captures case details including case type, offence, location, and case description.

**3. Complainant & Accused Information**

Allows recording of complainant and accused details along with contact information.

**4. Supporting Document Upload**

Allows users to upload supporting documents, images, and evidence related to the case.

**5. Auto Case ID Generation**

Automatically generates a unique Case ID for tracking and future reference.

## Module-2: Case Review & Assignment (Total Feature - 4)

**Feature Description**

**1. Case Review**

Allows designated officers to review newly registered cases.

**2. Case Assignment**

Enables supervisors to assign cases to responsible officers or investigators.

**3. Workflow Remarks**

Allows officers to provide remarks while forwarding cases.

**4. Return for Correction**

Allows reviewers to return incomplete cases for correction.

## Module-3: Investigation Management (Total Feature - 4)

**Feature Description**

**1. Investigation Scheduling**

Allows investigators to schedule investigation activities.

**2. Investigation Findings**

Records investigation observations and findings.

**3. Evidence Upload**

Allows investigators to upload additional evidence and supporting documents.

**4. Investigation Report**

Enables preparation and submission of investigation reports.

## Module-4: Hearing & Court Management (Total Feature - 4)

**Feature Description**

**1. Hearing Schedule**

Allows hearing dates to be scheduled for registered cases.

**2. Hearing Proceedings**

Records hearing discussions and proceedings.

**3. Court Order Entry**

Allows recording of court orders and legal decisions.

**4. Hearing Remarks**

Provides an option to record additional hearing observations.

## Module-5: Approval Management (Total Feature - 4)

**Feature Description**

**1. Case Verification**

Allows authorized officers to verify investigation reports and supporting documents.

**2. Approval**

Enables designated authorities to approve case decisions.

**3. Rejection**

Allows authorized officers to reject cases with appropriate reasons.

**4. Re-Investigation Request**

Allows returning cases for additional investigation when required.

## Module-6: Fine & Penalty Management (Total Feature - 4)

**Feature Description**

**1. Fine Calculation**

Allows recording of imposed fines and penalties.

**2. Fine Payment Tracking**

Tracks payment status of imposed fines.

**3. Penalty Recording**

Maintains records of penalties and imprisonment, if applicable.

**4. Payment Verification**

Verifies successful payment before case closure.

## Module-7: Case Closure (Total Feature - 4)

**Feature Description**

**1. Case Disposal**

Allows authorized officers to close completed cases.

**2. Disposal Report**

Generates the final case disposal report.

**3. Case Status Tracking**

Tracks the current status of every case throughout its lifecycle.

**4. Archive Case**

Moves completed cases into the archive for future reference.

## Module-8: Notification & Reporting (Total Feature - 5)

**Feature Description**

**1. Email Notification**

Sends email notifications regarding case progress and decisions.

**2. SMS Notification**

Provides SMS alerts for important workflow activities.

**3. Status Update Notification**

Automatically informs users whenever the case status changes.

**4. Case Reports**

Generates case-wise, officer-wise, and status-wise reports.

**5. Dashboard**

Displays real-time case statistics, pending cases, disposed cases, and performance summaries.

## Service-05: CM Mandatory New Certification

The CM Mandatory New Certification Management System consists of **12 functional modules** with a total of **46 key features**, designed to automate the complete certification lifecycle from application submission to certificate issuance.

The solution enables applicants to submit applications online, upload required documents, pay application fees, and receive automatically generated application IDs. Applications are reviewed through a structured shortfall management process, allowing reviewers to identify deficiencies, request additional documents, and manage correction and resubmission cycles while keeping applicants informed through automated notifications.

The system supports secure payment processing with fee collection, verification, and automatic status updates. Inspection activities are managed through inspector assignment, scheduling, physical inspections, report preparation, photo uploads, and remark recording. Inspection reports are then verified by the Assistant Director (AD) and Deputy Director (DD) before being forwarded to the Director for the final approval, rejection, or re-inspection decision.

Upon approval, the system completes the registration process, generates the CM Certificate, and provides applicants with a downloadable certificate. In case of rejection, automated rejection letters are issued along with notifications and product quality improvement guidance. The solution also includes integrated notification management through email and SMS, re-inspection workflow management, and comprehensive role-based access control for Applicants, Reviewers, Inspectors, ADs, DDs, Directors, and System Administrators.

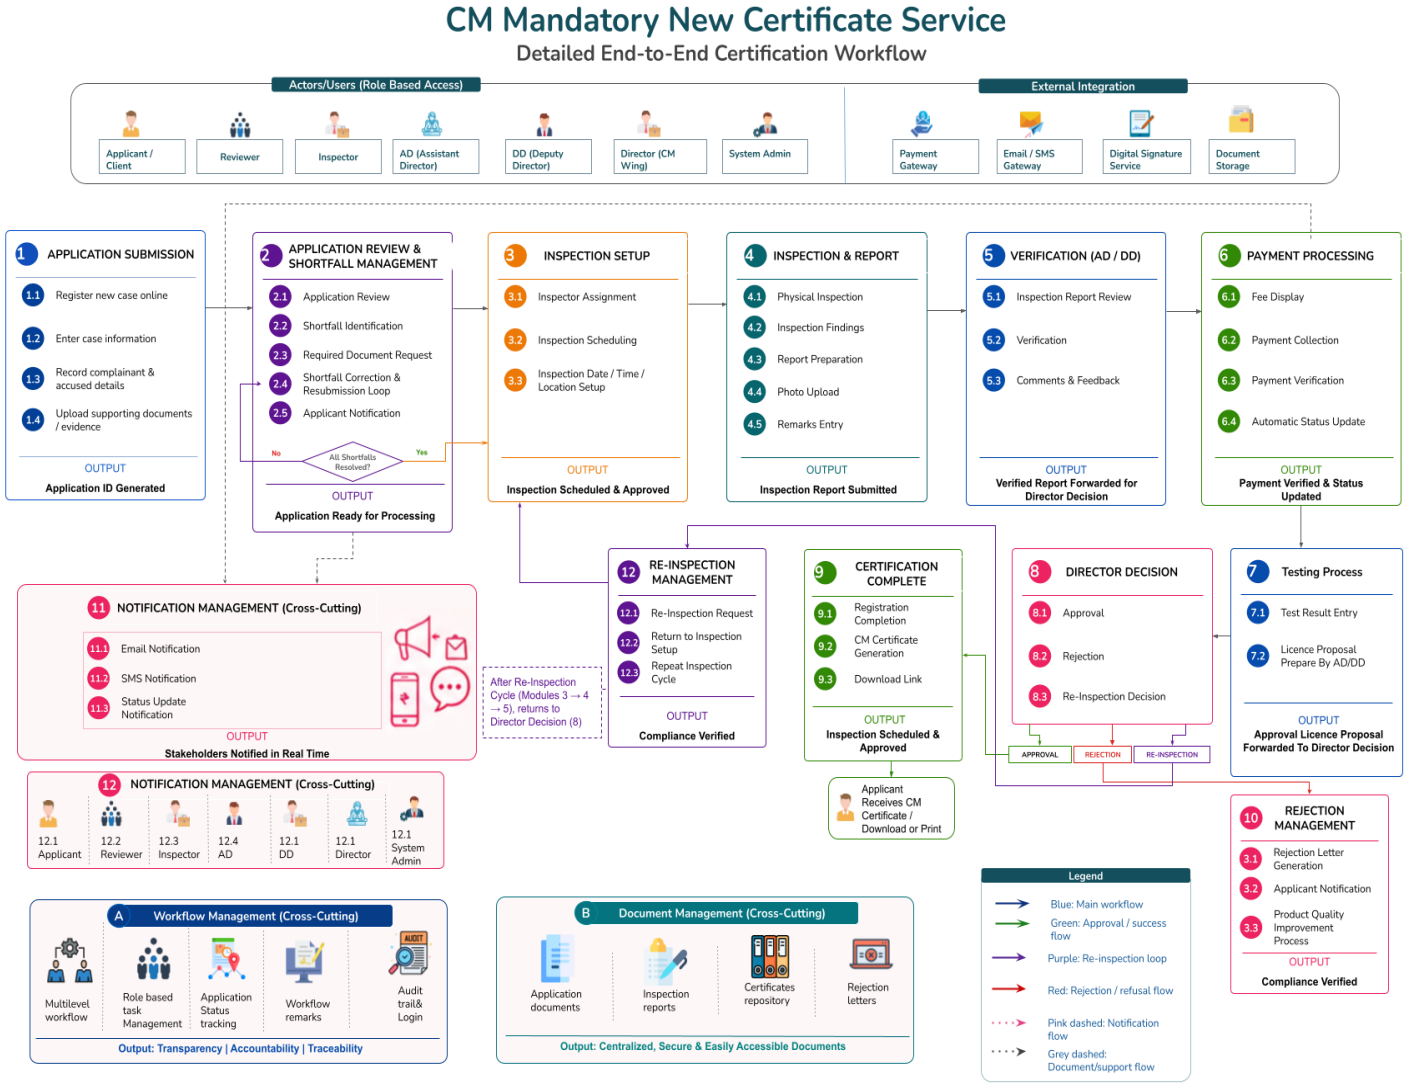

Figure Name: Workflow of CM Mandatory New Certification Service

## Module-1. Application Submission (Total Feature - 4)

**Features Description**

**1. Online Application Submission**

Allows applicants to submit Certification Mark (CM) applications electronically through the online portal. The system validates mandatory information before accepting the application for processing.

**2. Document Upload**

Enables applicants to upload all required supporting documents in approved formats. Each document is securely stored and linked to the corresponding application.

**3. Application Fee Payment**

Allows applicants to pay the prescribed application fee through the integrated payment gateway. Payment information is automatically recorded and associated with the application.

**4. Auto Application ID Generation**

Automatically generates a unique Application ID upon successful submission. The ID is used for application tracking and future correspondence.

## Module-2. Application Review & Shortfall Management (Total Feature - 5)

**Features Description**

**1. Application Review**

Allows authorized officers to review submitted applications and verify the completeness of the provided information and supporting documents.

**2. Shortfall Identification**

Enables reviewers to identify missing documents, incorrect information, or compliance gaps during the application assessment process.

**3. Required Document Request**

Allows reviewers to request additional documents or information from applicants whenever necessary. All requests are recorded within the application history.

**4. Shortfall Correction & Resubmission Loop**

Enables applicants to correct identified shortfalls and resubmit the application. The workflow supports multiple review and correction cycles until all requirements are fulfilled.

**5. Applicant Notification**

Automatically notifies applicants regarding application review results, shortfall requests, and resubmission status through the notification system.

## Module-3. Payment Processing (Total Feature - 4)

**Features Description**

**1. Fee Display**

Displays applicable fees dynamically based on the selected service and predefined fee configuration.

### 2. Payment Collection

Collects application fees securely through the integrated online payment gateway while maintaining complete transaction records.

### 3. Payment Verification

Verifies payment transactions automatically or through authorized verification before allowing the application to proceed.

### 4. Automatic Status Update

Automatically updates the application status once the payment is successfully verified, ensuring smooth workflow progression.

## Module-4. Inspection Setup (Total Feature - 3)

**Features Description**

### 1. Inspector Assignment

Allows authorized officials to assign qualified inspectors based on workload, expertise, or geographical jurisdiction.

### 2. Inspection Scheduling

Enables inspection schedules to be created based on inspector availability and organizational requirements.

### 3. Inspection Date/Time/Location Setup

Allows authorized users to define and approve the inspection date, time, and inspection location before the inspection is conducted.

## Module-5. Inspection & Report (Total Feature - 5)

**Features Description**

### 1. Physical Inspection

Allows inspectors to conduct on-site inspections according to approved standards, guidelines, and regulatory requirements.

### 2. Inspection Findings

Records inspection observations, compliance status, and identified non-conformities during the inspection process.

### 3. Report Preparation

Enables inspectors to prepare structured inspection reports based on field observations and collected evidence.

### 4. Photo Upload

Allows inspectors to upload photographs as supporting evidence for inspection findings and compliance verification.

### 5. Remarks Entry

Provides inspectors with the option to record additional comments, recommendations, or observations related to the inspection.

## Module-6. Verification Module (AD/DD) (Total Feature - 3)

**Features Description**

**1. Inspection Report Review**

Allows the Assistant Director (AD) and Deputy Director (DD) to review submitted inspection reports for completeness and compliance.

**2. Verification**

Enables authorized officers to verify inspection findings before forwarding the application for the Director's decision.

**3. Comments & Feedback**

Allows reviewers to provide comments, recommendations, or clarification requests during the verification process.

## Module-7. Director Decision (Total Feature - 3)

**Features Description**

**1. Approval**

Allows the Director to approve applications that fully satisfy all regulatory and inspection requirements.

**2. Rejection**

Allows the Director to reject applications with documented reasons whenever required compliance criteria are not met.

**3. Re-Inspection Decision**

Enables the Director to request a re-inspection if additional verification is required before making the final decision.

## Module-8. Certification Complete (Total Feature - 3)

**Features Description**

**1. Registration Completion**

Finalizes the Certification Mark (CM) registration process after successful verification and approval.

**2. CM Certificate Generation**

Automatically generates the official Certification Mark (CM) Certificate using the approved application information.

**3. Download Link**

Provides applicants with secure access to download the issued CM Certificate directly from the system.

## Module-9. Rejection Management (Total Feature - 3)

**Features Description**

**1. Rejection Letter Generation**

Automatically generates a formal rejection letter including the reasons for rejection and applicable recommendations.

### 2. Applicant Notification

Notifies applicants immediately after the rejection decision through email, SMS, or in-system notifications.

### 3. Product Quality Improvement Process

Allows applicants to review identified quality issues, implement corrective actions, and improve product compliance before submitting a new application.

## Module-10. Notification Management (Total Feature - 3)

### Features Description

### 1. Email Notification

Automatically sends email notifications for application events, approvals, inspections, and workflow updates.

### 2. SMS Notification

Delivers SMS alerts regarding payment confirmation, application status, inspection schedules, and final decisions.

### 3. Status Update Notification

Provides real-time notifications whenever the application progresses to a new workflow stage.

## Module-11. Re-Inspection Management (Total Feature - 3)

### Features Description

### 1. Re-Inspection Request

Allows authorized officials to initiate a re-inspection whenever additional verification or compliance confirmation is required.

### 2. Return to Inspection Setup

Automatically routes the application back to the inspection scheduling stage for planning the re-inspection.

### 3. Repeat Inspection Cycle

Supports multiple inspection cycles until all compliance requirements are successfully fulfilled.

## Module-12. User & Role Management (Total Feature - 7)

### Features Description

### 1. Applicant

Allows applicants to submit applications, upload documents, make payments, track application progress, and download issued certificates.

### 2. Reviewer

Enables reviewers to examine applications, identify shortfalls, request additional information, and verify submitted documents.

### 3. Inspector

Allows inspectors to perform field inspections, record findings, upload supporting evidence, and prepare inspection reports.

### 4. AD

Provides the Assistant Director (AD) with authority to review inspection reports, verify findings, and recommend applications for higher approval.

### 5. DD

Allows the Deputy Director (DD) to perform final verification and forward eligible applications to the Director for decision.

### 6. Director

Provides the Director with authority to approve, reject, or request re-inspection based on the overall evaluation and compliance status.

### 7. System Admin Role Management

Allows system administrators to manage users, assign roles and permissions, and control secure access across the entire application.

## Service-06: CM Mandatory Renewal Service

The proposed Application & Certification Management System consists of **12 functional modules** with a total of **46 key features**, designed to automate the complete certification lifecycle from application submission to certificate issuance.

The solution enables applicants to submit applications online, upload required documents, pay application fees, and receive automatically generated application IDs. Applications are reviewed through a structured shortfall management process, allowing reviewers to identify deficiencies, request additional documents, and manage correction and resubmission cycles while keeping applicants informed through automated notifications.

The system supports secure payment processing with fee collection, verification, and automatic status updates. Inspection activities are managed through inspector assignment, scheduling, physical inspections, report preparation, photo uploads, and remark recording. Inspection reports are then verified by the Assistant Director (AD) and Deputy Director (DD) before being forwarded to the Director for the final approval, rejection, or re-inspection decision.

Upon approval, the system completes the registration process, generates the CM Certificate, and provides applicants with a downloadable certificate. In case of rejection, automated rejection letters are issued along with notifications and product quality improvement guidance. The solution also includes integrated notification management through email and SMS, re-inspection workflow management, and comprehensive role-based access control for Applicants, Reviewers, Inspectors, ADs, DDs, Directors, and System Administrators.

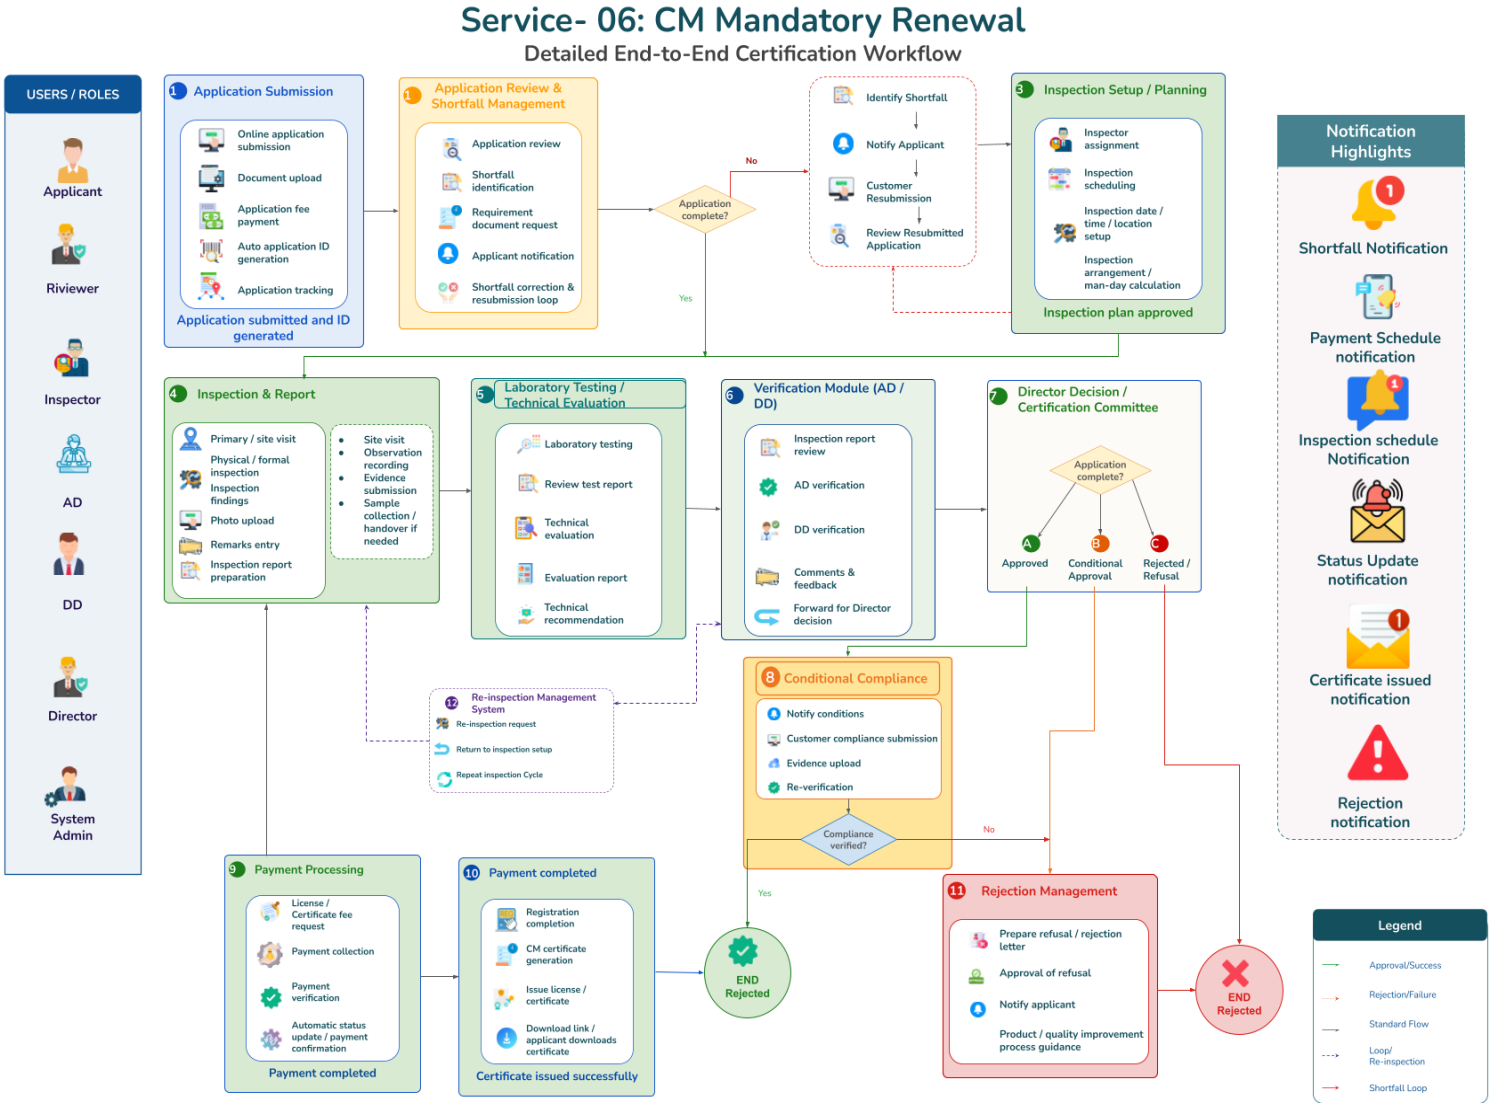

Fig: CM Mandatory Renew Service Workflow

## Module-1. Application Submission (Total Feature - 4)

**Features Description**

**1. Online Application Submission**

Allows applicants to submit Certification Mark (CM) applications electronically through the online portal. The system validates mandatory information before accepting the application for processing.

**2. Document Upload**

Enables applicants to upload all required supporting documents in approved formats. Each document is securely stored and linked to the corresponding application.

**3. Application Fee Payment**

Allows applicants to pay the prescribed application fee through the integrated payment gateway. Payment information is automatically recorded and associated with the application.

**4. Auto Application ID Generation**

Automatically generates a unique Application ID upon successful submission. The ID is used for application tracking and future correspondence.

## Module-2. Application Review & Shortfall Management (Total Feature - 5)

**Features Description**

**1. Application Review**

Allows authorized officers to review submitted applications and verify the completeness of the provided information and supporting documents.

**2. Shortfall Identification**

Enables reviewers to identify missing documents, incorrect information, or compliance gaps during the application assessment process.

**3. Required Document Request**

Allows reviewers to request additional documents or information from applicants whenever necessary. All requests are recorded within the application history.

**4. Shortfall Correction & Resubmission Loop**

Enables applicants to correct identified shortfalls and resubmit the application. The workflow supports multiple review and correction cycles until all requirements are fulfilled.

**5. Applicant Notification**

Automatically notifies applicants regarding application review results, shortfall requests, and resubmission status through the notification system.

## Module-3. Payment Processing (Total Feature - 4)

**Features Description**

**1. Fee Display**

Displays applicable fees dynamically based on the selected service and predefined fee configuration.

### 2. Payment Collection

Collects application fees securely through the integrated online payment gateway while maintaining complete transaction records.

### 3. Payment Verification

Verifies payment transactions automatically or through authorized verification before allowing the application to proceed.

### 4. Automatic Status Update

Automatically updates the application status once the payment is successfully verified, ensuring smooth workflow progression.

## Module-4. Inspection Setup (Total Feature - 3)

**Features Description**

### 1. Inspector Assignment

Allows authorized officials to assign qualified inspectors based on workload, expertise, or geographical jurisdiction.

### 2. Inspection Scheduling

Enables inspection schedules to be created based on inspector availability and organizational requirements.

### 3. Inspection Date/Time/Location Setup

Allows authorized users to define and approve the inspection date, time, and inspection location before the inspection is conducted.

## Module-5. Inspection & Report (Total Feature - 5)

**Features Description**

### 1. Physical Inspection

Allows inspectors to conduct on-site inspections according to approved standards, guidelines, and regulatory requirements.

### 2. Inspection Findings

Records inspection observations, compliance status, and identified non-conformities during the inspection process.

### 3. Report Preparation

Enables inspectors to prepare structured inspection reports based on field observations and collected evidence.

### 4. Photo Upload

Allows inspectors to upload photographs as supporting evidence for inspection findings and compliance verification.

### 5. Remarks Entry

Provides inspectors with the option to record additional comments, recommendations, or observations related to the inspection.

## Module-6. Verification Module (AD/DD) (Total Feature - 3)

**Features Description**

**1. Inspection Report Review**

Allows the Assistant Director (AD) and Deputy Director (DD) to review submitted inspection reports for completeness and compliance.

**2. Verification**

Enables authorized officers to verify inspection findings before forwarding the application for the Director's decision.

**3. Comments & Feedback**

Allows reviewers to provide comments, recommendations, or clarification requests during the verification process.

## Module-7. Director Decision (Total Feature - 3)

**Features Description**

**1. Approval**

Allows the Director to approve applications that fully satisfy all regulatory and inspection requirements.

**2. Rejection**

Allows the Director to reject applications with documented reasons whenever required compliance criteria are not met.

**3. Re-Inspection Decision**

Enables the Director to request a re-inspection if additional verification is required before making the final decision.

## Module-8. Certification Complete (Total Feature - 3)

**Features Description**

**1. Registration Completion**

Finalizes the Certification Mark (CM) registration process after successful verification and approval.

**2. CM Certificate Generation**

Automatically generates the official Certification Mark (CM) Certificate using the approved application information.

**3. Download Link**

Provides applicants with secure access to download the issued CM Certificate directly from the system.

## Module-9. Rejection Management (Total Feature - 3)

**Features Description**

**1. Rejection Letter Generation**

Automatically generates a formal rejection letter including the reasons for rejection and applicable recommendations.

### 2. Applicant Notification

Notifies applicants immediately after the rejection decision through email, SMS, or in-system notifications.

### 3. Product Quality Improvement Process

Allows applicants to review identified quality issues, implement corrective actions, and improve product compliance before submitting a new application.

## Module-10. Notification Management (Total Feature - 3)

### Features Description

### 1. Email Notification

Automatically sends email notifications for application events, approvals, inspections, and workflow updates.

### 2. SMS Notification

Delivers SMS alerts regarding payment confirmation, application status, inspection schedules, and final decisions.

### 3. Status Update Notification

Provides real-time notifications whenever the application progresses to a new workflow stage.

## Module-11. Re-Inspection Management (Total Feature - 3)

### Features Description

### 1. Re-Inspection Request

Allows authorized officials to initiate a re-inspection whenever additional verification or compliance confirmation is required.

### 2. Return to Inspection Setup

Automatically routes the application back to the inspection scheduling stage for planning the re-inspection.

### 3. Repeat Inspection Cycle

Supports multiple inspection cycles until all compliance requirements are successfully fulfilled.

## Module-12. User & Role Management (Total Feature - 7)

### Features Description

### 1. Applicant

Allows applicants to submit applications, upload documents, make payments, track application progress, and download issued certificates.

### 2. Reviewer

Enables reviewers to examine applications, identify shortfalls, request additional information, and verify submitted documents.

### 3. Inspector

Allows inspectors to perform field inspections, record findings, upload supporting evidence, and prepare inspection reports.

### 4. AD

Provides the Assistant Director (AD) with authority to review inspection reports, verify findings, and recommend applications for higher approval.

### 5. DD

Allows the Deputy Director (DD) to perform final verification and forward eligible applications to the Director for decision.

### 6. Director

Provides the Director with authority to approve, reject, or request re-inspection based on the overall evaluation and compliance status.

### 7. System Admin Role Management

Allows system administrators to manage users, assign roles and permissions, and control secure access across the entire application.

## Module-1. Application Submission (Total Feature - 4)

**Features Description**

**1. Online Application Submission**

Allows applicants to submit Certification Mark (CM) applications electronically through the online portal. The system validates mandatory information before accepting the application for processing.

**2. Document Upload**

Enables applicants to upload all required supporting documents in approved formats. Each document is securely stored and linked to the corresponding application.

**3. Application Fee Payment**

Allows applicants to pay the prescribed application fee through the integrated payment gateway. Payment information is automatically recorded and associated with the application.

**4. Auto Application ID Generation**

Automatically generates a unique Application ID upon successful submission. The ID is used for application tracking and future correspondence.

## Module-2. Application Review & Shortfall Management (Total Feature - 5)

**Features Description**

**1. Application Review**

Allows authorized officers to review submitted applications and verify the completeness of the provided information and supporting documents.

**2. Shortfall Identification**

Enables reviewers to identify missing documents, incorrect information, or compliance gaps during the application assessment process.

**3. Required Document Request**

Allows reviewers to request additional documents or information from applicants whenever necessary. All requests are recorded within the application history.

**4. Shortfall Correction & Resubmission Loop**

Enables applicants to correct identified shortfalls and resubmit the application. The workflow supports multiple review and correction cycles until all requirements are fulfilled.

**5. Applicant Notification**

Automatically notifies applicants regarding application review results, shortfall requests, and resubmission status through the notification system.

## Module-3. Payment Processing (Total Feature - 4)

**Features Description**

**1. Fee Display**

Displays applicable fees dynamically based on the selected service and predefined fee configuration.

### 2. Payment Collection

Collects application fees securely through the integrated online payment gateway while maintaining complete transaction records.

### 3. Payment Verification

Verifies payment transactions automatically or through authorized verification before allowing the application to proceed.

### 4. Automatic Status Update

Automatically updates the application status once the payment is successfully verified, ensuring smooth workflow progression.

## Module-4. Inspection Setup (Total Feature - 3)

**Features Description**

### 1. Inspector Assignment

Allows authorized officials to assign qualified inspectors based on workload, expertise, or geographical jurisdiction.

### 2. Inspection Scheduling

Enables inspection schedules to be created based on inspector availability and organizational requirements.

### 3. Inspection Date/Time/Location Setup

Allows authorized users to define and approve the inspection date, time, and inspection location before the inspection is conducted.

## Module-5. Inspection & Report (Total Feature - 5)

**Features Description**

### 1. Physical Inspection

Allows inspectors to conduct on-site inspections according to approved standards, guidelines, and regulatory requirements.

### 2. Inspection Findings

Records inspection observations, compliance status, and identified non-conformities during the inspection process.

### 3. Report Preparation

Enables inspectors to prepare structured inspection reports based on field observations and collected evidence.

### 4. Photo Upload

Allows inspectors to upload photographs as supporting evidence for inspection findings and compliance verification.

### 5. Remarks Entry

Provides inspectors with the option to record additional comments, recommendations, or observations related to the inspection.

## Module-6. Verification Module (AD/DD) (Total Feature - 3)

**Features Description**

**1. Inspection Report Review**

Allows the Assistant Director (AD) and Deputy Director (DD) to review submitted inspection reports for completeness and compliance.

**2. Verification**

Enables authorized officers to verify inspection findings before forwarding the application for the Director's decision.

**3. Comments & Feedback**

Allows reviewers to provide comments, recommendations, or clarification requests during the verification process.

## Module-7. Director Decision (Total Feature - 3)

**Features Description**

**1. Approval**

Allows the Director to approve applications that fully satisfy all regulatory and inspection requirements.

**2. Rejection**

Allows the Director to reject applications with documented reasons whenever required compliance criteria are not met.

**3. Re-Inspection Decision**

Enables the Director to request a re-inspection if additional verification is required before making the final decision.

## Module-8. Certification Complete (Total Feature - 3)

**Features Description**

**1. Registration Completion**

Finalizes the Certification Mark (CM) registration process after successful verification and approval.

**2. CM Certificate Generation**

Automatically generates the official Certification Mark (CM) Certificate using the approved application information.

**3. Download Link**

Provides applicants with secure access to download the issued CM Certificate directly from the system.

## Module-9. Rejection Management (Total Feature - 3)

**Features Description**

**1. Rejection Letter Generation**

Automatically generates a formal rejection letter including the reasons for rejection and applicable recommendations.

### 2. Applicant Notification

Notifies applicants immediately after the rejection decision through email, SMS, or in-system notifications.

### 3. Product Quality Improvement Process

Allows applicants to review identified quality issues, implement corrective actions, and improve product compliance before submitting a new application.

## Module-10. Notification Management (Total Feature - 3)

### Features Description

### 1. Email Notification

Automatically sends email notifications for application events, approvals, inspections, and workflow updates.

### 2. SMS Notification

Delivers SMS alerts regarding payment confirmation, application status, inspection schedules, and final decisions.

### 3. Status Update Notification

Provides real-time notifications whenever the application progresses to a new workflow stage.

## Module-11. Re-Inspection Management (Total Feature - 3)

### Features Description

### 1. Re-Inspection Request

Allows authorized officials to initiate a re-inspection whenever additional verification or compliance confirmation is required.

### 2. Return to Inspection Setup

Automatically routes the application back to the inspection scheduling stage for planning the re-inspection.

### 3. Repeat Inspection Cycle

Supports multiple inspection cycles until all compliance requirements are successfully fulfilled.

## Module-12. User & Role Management (Total Feature - 7)

### Features Description

### 1. Applicant

Allows applicants to submit applications, upload documents, make payments, track application progress, and download issued certificates.

### 2. Reviewer

Enables reviewers to examine applications, identify shortfalls, request additional information, and verify submitted documents.

### 3. Inspector

Allows inspectors to perform field inspections, record findings, upload supporting evidence, and prepare inspection reports.

### 4. AD

Provides the Assistant Director (AD) with authority to review inspection reports, verify findings, and recommend applications for higher approval.

### 5. DD

Allows the Deputy Director (DD) to perform final verification and forward eligible applications to the Director for decision.

### 6. Director

Provides the Director with authority to approve, reject, or request re-inspection based on the overall evaluation and compliance status.

### 7. System Admin Role Management

Allows system administrators to manage users, assign roles and permissions, and control secure access across the entire application.

## Service-08: CM Scope New Certification

The **CM Mandatory New Certification System** is a comprehensive workflow-driven platform designed to automate and manage the complete mandatory certification and licensing lifecycle from application submission to license issuance. The solution enables applicants to submit online applications, complete initial questionnaires, pay application fees, and track application progress through a centralized digital portal. Applications undergo a structured multi-level review process where designated officials evaluate submissions, identify shortfalls, request corrections, and coordinate inspection activities. The system supports inspection planning, site inspections, laboratory testing, technical evaluations, and verification workflows to ensure compliance with regulatory standards. Based on inspection and testing outcomes, applications proceed through approval, conditional approval, re-inspection, or rejection processes managed by the certification committee. The platform also facilitates conditional compliance management by enabling applicants to submit corrective evidence and allowing officials to verify compliance before final decisions. Integrated payment processing automates license fee collection and verification prior to license issuance. The system further provides automated document management, notification services, workflow tracking, and audit trails to ensure transparency, accountability, and efficient collaboration among all stakeholders. By digitizing every stage of the certification process, the solution minimizes manual intervention, improves operational efficiency, enhances regulatory compliance, ensures complete process traceability, and delivers faster, more transparent licensing services for both applicants and regulatory authorities.

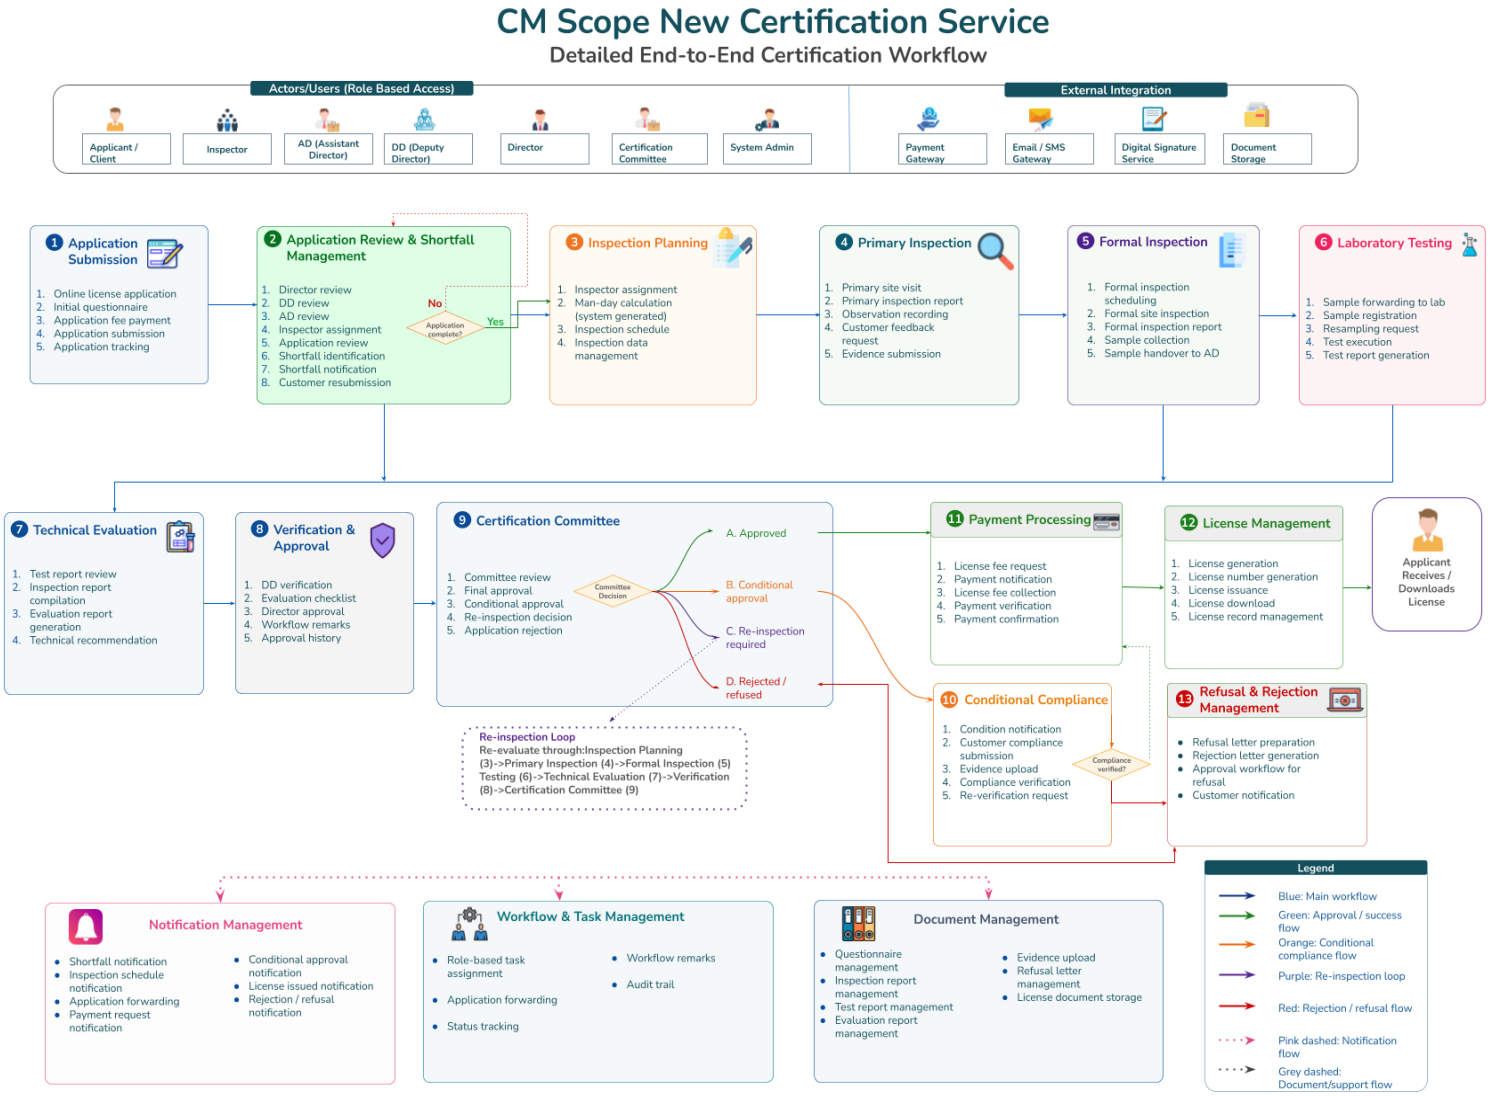

Fig: Workflow diagram of CM Mandatory New Certification

## Module-1. Application Submission (Total Feature - 5)

**Features Description**

**1. Online License Application:**

Enables applicants to submit mandatory license applications through a secure online portal.

**2. Initial Questionnaire:**

Collects preliminary business, product, and compliance information required for application assessment.

**3. Application Fee Payment:**

Allows applicants to pay the prescribed application fee through integrated payment channels.

**4. Application Submission:**

Finalizes and submits the completed application for official processing.

**5. Application Tracking:**

Allows applicants to monitor the real-time status of their submitted applications.

## Module-2. Application Review & Shortfall Management (Total Feature - 8)

**Features Description**

**1. Director Review:**

Enables the Director to review applications and provide approval comments or decisions.

**2. DD Review:**

Supports Deputy Director review and recommendation during application processing.

**3. AD Review:**

Allows the Assistant Director to perform detailed application verification.

**4. Inspector Assignment:**

Assigns the appropriate inspector for application assessment.

**5. Application Review:**

Reviews submitted documents for completeness and regulatory compliance.

**6. Shortfall Identification:**

Identifies missing documents or compliance deficiencies.

**7. Shortfall Notification:**

Notifies applicants about identified deficiencies requiring correction.

**8. Customer Resubmission:**

Allows applicants to resubmit corrected documents and information.

## Module-3. Inspection Planning (Total Feature - 4)

**Features Description**

**1. Inspector Assignment:**

Assigns inspectors based on workload, expertise, and jurisdiction.

**2. Man-Day Calculation (System Generated):**

Automatically calculates the required inspection effort based on predefined rules.

**3. Inspection Schedule:**

Creates inspection schedules for assigned inspectors.

**4. Inspection Date Management:**

Manages inspection dates, rescheduling, and calendar updates.

## Module-4. Primary Inspection (Total Feature - 5)

**Features Description**

**1. Primary Site Visit:**

Records the initial site inspection conducted by inspectors.

**2. Primary Inspection Report:**

Generates a report containing preliminary inspection findings.

**3. Observation Recording:**

Captures observations and non-conformities identified during inspection.

**4. Customer Feedback Request:**

Requests clarification or feedback from applicants regarding inspection observations.

**5. Evidence Submission:**

Allows applicants to upload supporting evidence for inspection findings.

## Module-5. Formal Inspection (Total Feature - 5)

**Features Description**

**1. Formal Inspection Scheduling:**

Schedules official compliance inspections.

**2. Formal Site Inspection:**

Records detailed inspection activities conducted at the applicant's premises.

**3. Formal Inspection Report:**

Generates the official inspection report following completion.

**4. Sample Collection:**

Records samples collected for laboratory testing.

**5. Sample Handover to AD:**

Tracks the secure handover of collected samples to the Assistant Director.

## Module-6. Laboratory Testing (Total Feature - 5)

**Features Description**

**1. Sample Forwarding to Lab:**

Forwards collected samples to the designated laboratory.

**2. Sample Registration:**

Registers laboratory samples with unique identification numbers.

**3. Resampling Request:**

Initiates additional sample collection when required.

**4. Test Execution:**

Performs laboratory testing according to approved standards.

**5. Test Report Generation:**

Generates official laboratory test reports.

## Module-7. Technical Evaluation (Total Feature - 4)

**Features Description**

**1. Test Report Review:**

Reviews laboratory test results for technical accuracy.

**2. Inspection Report Compilation:**

Consolidates inspection findings for evaluation.

**3. Evaluation Report Generation:**

Produces comprehensive technical evaluation reports.

**4. Technical Recommendation:**

Provides recommendations for approval, rejection, or further action.

## Module-8. Verification & Approval (Total Feature - 5)

**Features Description**

**1. DD Verification:**

Enables the Deputy Director to verify evaluation results.

**2. Evaluation Checklist:**

Validates compliance using standardized evaluation checklists.

**3. Director Approval:**

Allows the Director to provide final administrative approval.

**4. Workflow Remarks:**

Records comments and observations throughout the approval process.

**5. Approval History:**

Maintains a complete history of approval decisions.

## Module-9. Certification Committee (Total Feature - 5)

**Features Description**

**1. Committee Review:**

Facilitates committee evaluation of completed applications.

**2. Final Approval:**

Grants final certification approval.

**3. Conditional Approval:**

Approves applications subject to specified compliance conditions.

**4. Re-inspection Decision:**

Determines whether additional inspections are required.

**5. Application Rejection:**

Rejects applications that fail to meet regulatory requirements.

## Module-10. Conditional Compliance (Total Feature - 5)

**Features Description**

**1. Condition Notification:**

Notifies applicants of conditions that must be fulfilled.

**2. Customer Compliance Submission:**

Allows applicants to submit compliance evidence.

**3. Evidence Upload:**

Supports uploading documents required for compliance verification.

**4. Compliance Verification:**

Reviews submitted evidence to verify compliance.

**5. Re-verification Request:**

Initiates additional verification when necessary.

## Module-11. Payment Processing (Total Feature - 5)

**Features Description**

**1. License Fee Request:**

Generates the payable license fee request.

**2. Payment Notification:**

Notifies applicants regarding pending payments.

**3. License Fee Collection:**

Records license fee payments from applicants.

**4. Payment Verification:**

Verifies payment through the integrated payment gateway.

**5. Payment Confirmation:**

Confirms successful payment before license issuance.

## Module-12. License Management (Total Feature - 5)

**Features Description**

**1. License Generation:**

Generates the approved digital license.

**2. License Number Generation:**

Automatically assigns a unique license number.

**3. License Issuance:**

Issues the approved license to the applicant.

**4. License Download:**

Allows applicants to download issued licenses.

**5. License Record Management:**

Maintains a centralized repository of all issued licenses.

## Module-13. Refusal & Rejection Management (Total Feature - 4)

**Features Description**

**1. Refusal Letter Preparation:**

Prepares official refusal letters for unsuccessful applications.

**2. Rejection Letter Generation:**

Generates rejection letters with documented reasons.

**3. Approval Workflow for Refusal:**

Routes refusal documents through the approval process.

**4. Customer Notification:**

Notifies applicants of refusal or rejection decisions.

## Module-14. Notification (Total Feature - 6)

**Features Description**

**1. Shortfall Notification:**

Sends alerts regarding missing documents or deficiencies.

**2. Inspection Schedule Notification:**

Notifies applicants about inspection schedules.

**3. Payment Request Notification:**

Informs applicants when payments are due.

**4. Conditional Approval Notification:**

Communicates conditional approval decisions.

**5. License Issued Notification:**

Notifies applicants after license issuance.

**6. Rejection/Refusal Notification:**

Informs applicants of rejection or refusal outcomes.

## Module-15. Workflow & Task Management (Total Feature - 5)

**Features Description**

**1. Role-based Task Assignment:**

Assigns workflow tasks according to user roles and responsibilities.

**2. Application Forwarding:**

Routes applications to the next stage of the workflow.

**3. Status Tracking:**

Tracks application progress throughout the certification lifecycle.

**4. Workflow Remarks:**

Records comments and decisions during workflow execution.

**5. Audit Trail:**

Maintains a complete history of all workflow activities for transparency and accountability.

## Module-16. Document Management (Total Feature - 7)

**Features Description**

**1. Questionnaire Management:**

Stores and manages completed application questionnaires.

**2. Inspection Report Management:**

Maintains inspection reports in a centralized repository.

**3. Test Report Management:**

Stores laboratory test reports for future reference.

**4. Evaluation Report Management:**

Manages technical evaluation reports.

**5. Evidence Upload:**

Supports secure uploading and storage of supporting documents.

**6. Refusal Letter Management:**

Maintains official refusal and rejection documents.

**7. License Document Storage:**

Stores issued licenses and related documents in a centralized digital repository.

## Module-1. Application Submission (Total Feature - 5)

**Features Description**

**1. Online License Application:**

Enables applicants to submit mandatory license applications through a secure online portal.

**2. Initial Questionnaire:**

Collects preliminary business, product, and compliance information required for application assessment.

**3. Application Fee Payment:**

Allows applicants to pay the prescribed application fee through integrated payment channels.

**4. Application Submission:**

Finalizes and submits the completed application for official processing.

**5. Application Tracking:**

Allows applicants to monitor the real-time status of their submitted applications.

## Module-2. Application Review & Shortfall Management (Total Feature - 8)

**Features Description**

**1. Director Review:**

Enables the Director to review applications and provide approval comments or decisions.

**2. DD Review:**

Supports Deputy Director review and recommendation during application processing.

**3. AD Review:**

Allows the Assistant Director to perform detailed application verification.

**4. Inspector Assignment:**

Assigns the appropriate inspector for application assessment.

**5. Application Review:**

Reviews submitted documents for completeness and regulatory compliance.

**6. Shortfall Identification:**

Identifies missing documents or compliance deficiencies.

**7. Shortfall Notification:**

Notifies applicants about identified deficiencies requiring correction.

**8. Customer Resubmission:**

Allows applicants to resubmit corrected documents and information.

## Module-3. Inspection Planning (Total Feature - 4)

**Features Description**

**1. Inspector Assignment:**

Assigns inspectors based on workload, expertise, and jurisdiction.

**2. Man-Day Calculation (System Generated):**

Automatically calculates the required inspection effort based on predefined rules.

**3. Inspection Schedule:**

Creates inspection schedules for assigned inspectors.

**4. Inspection Date Management:**

Manages inspection dates, rescheduling, and calendar updates.

## Module-4. Primary Inspection (Total Feature - 5)

**Features Description**

**1. Primary Site Visit:**

Records the initial site inspection conducted by inspectors.

**2. Primary Inspection Report:**

Generates a report containing preliminary inspection findings.

**3. Observation Recording:**

Captures observations and non-conformities identified during inspection.

**4. Customer Feedback Request:**

Requests clarification or feedback from applicants regarding inspection observations.

**5. Evidence Submission:**

Allows applicants to upload supporting evidence for inspection findings.

## Module-5. Formal Inspection (Total Feature - 5)

**Features Description**

**1. Formal Inspection Scheduling:**

Schedules official compliance inspections.

**2. Formal Site Inspection:**

Records detailed inspection activities conducted at the applicant's premises.

**3. Formal Inspection Report:**

Generates the official inspection report following completion.

**4. Sample Collection:**

Records samples collected for laboratory testing.

**5. Sample Handover to AD:**

Tracks the secure handover of collected samples to the Assistant Director.

## Module-6. Laboratory Testing (Total Feature - 5)

**Features Description**

**1. Sample Forwarding to Lab:**

Forwards collected samples to the designated laboratory.

**2. Sample Registration:**

Registers laboratory samples with unique identification numbers.

**3. Resampling Request:**

Initiates additional sample collection when required.

**4. Test Execution:**

Performs laboratory testing according to approved standards.

**5. Test Report Generation:**

Generates official laboratory test reports.

## Module-7. Technical Evaluation (Total Feature - 4)

**Features Description**

**1. Test Report Review:**

Reviews laboratory test results for technical accuracy.

**2. Inspection Report Compilation:**

Consolidates inspection findings for evaluation.

**3. Evaluation Report Generation:**

Produces comprehensive technical evaluation reports.

**4. Technical Recommendation:**

Provides recommendations for approval, rejection, or further action.

## Module-8. Verification & Approval (Total Feature - 5)

**Features Description**

**1. DD Verification:**

Enables the Deputy Director to verify evaluation results.

**2. Evaluation Checklist:**

Validates compliance using standardized evaluation checklists.

**3. Director Approval:**

Allows the Director to provide final administrative approval.

**4. Workflow Remarks:**

Records comments and observations throughout the approval process.

**5. Approval History:**

Maintains a complete history of approval decisions.

## Module-9. Certification Committee (Total Feature - 5)

**Features Description**

**1. Committee Review:**

Facilitates committee evaluation of completed applications.

**2. Final Approval:**

Grants final certification approval.

**3. Conditional Approval:**

Approves applications subject to specified compliance conditions.

**4. Re-inspection Decision:**

Determines whether additional inspections are required.

**5. Application Rejection:**

Rejects applications that fail to meet regulatory requirements.

## Module-10. Conditional Compliance (Total Feature - 5)

**Features Description**

**1. Condition Notification:**

Notifies applicants of conditions that must be fulfilled.

**2. Customer Compliance Submission:**

Allows applicants to submit compliance evidence.

**3. Evidence Upload:**

Supports uploading documents required for compliance verification.

**4. Compliance Verification:**

Reviews submitted evidence to verify compliance.

**5. Re-verification Request:**

Initiates additional verification when necessary.

## Module-11. Payment Processing (Total Feature - 5)

**Features Description**

**1. License Fee Request:**

Generates the payable license fee request.

**2. Payment Notification:**

Notifies applicants regarding pending payments.

**3. License Fee Collection:**

Records license fee payments from applicants.

**4. Payment Verification:**

Verifies payment through the integrated payment gateway.

**5. Payment Confirmation:**

Confirms successful payment before license issuance.

## Module-12. License Management (Total Feature - 5)

**Features Description**

**1. License Generation:**

Generates the approved digital license.

**2. License Number Generation:**

Automatically assigns a unique license number.

**3. License Issuance:**

Issues the approved license to the applicant.

**4. License Download:**

Allows applicants to download issued licenses.

**5. License Record Management:**

Maintains a centralized repository of all issued licenses.

## Module-13. Refusal & Rejection Management (Total Feature - 4)

**Features Description**

**1. Refusal Letter Preparation:**

Prepares official refusal letters for unsuccessful applications.

**2. Rejection Letter Generation:**

Generates rejection letters with documented reasons.

**3. Approval Workflow for Refusal:**

Routes refusal documents through the approval process.

**4. Customer Notification:**

Notifies applicants of refusal or rejection decisions.

## Module-14. Notification (Total Feature - 6)

**Features Description**

**1. Shortfall Notification:**

Sends alerts regarding missing documents or deficiencies.

**2. Inspection Schedule Notification:**

Notifies applicants about inspection schedules.

**3. Payment Request Notification:**

Informs applicants when payments are due.

**4. Conditional Approval Notification:**

Communicates conditional approval decisions.

**5. License Issued Notification:**

Notifies applicants after license issuance.

**6. Rejection/Refusal Notification:**

Informs applicants of rejection or refusal outcomes.

## Module-15. Workflow & Task Management (Total Feature - 5)

**Features Description**

**1. Role-based Task Assignment:**

Assigns workflow tasks according to user roles and responsibilities.

**2. Application Forwarding:**

Routes applications to the next stage of the workflow.

**3. Status Tracking:**

Tracks application progress throughout the certification lifecycle.

**4. Workflow Remarks:**

Records comments and decisions during workflow execution.

**5. Audit Trail:**

Maintains a complete history of all workflow activities for transparency and accountability.

## Module-16. Document Management (Total Feature - 7)

**Features Description**

**1. Questionnaire Management:**

Stores and manages completed application questionnaires.

**2. Inspection Report Management:**

Maintains inspection reports in a centralized repository.

**3. Test Report Management:**

Stores laboratory test reports for future reference.

**4. Evaluation Report Management:**

Manages technical evaluation reports.

**5. Evidence Upload:**

Supports secure uploading and storage of supporting documents.

**6. Refusal Letter Management:**

Maintains official refusal and rejection documents.

**7. License Document Storage:**

Stores issued licenses and related documents in a centralized digital repository.

## Service-10: CM Scope Brand Inclusion Certification

The **CM Scope Brand Inclusion Certification System** is a comprehensive workflow-driven platform designed to automate and manage the complete brand inclusion certification and licensing lifecycle from application submission to license issuance. The solution enables applicants to submit online applications, complete initial questionnaires, pay application fees, and track application progress through a centralized digital portal. Applications undergo a structured multi-level review process where designated officials evaluate submissions, identify shortfalls, request corrections, and coordinate inspection activities. The system supports inspection planning, site inspections, laboratory testing, technical evaluations, and verification workflows to ensure compliance with regulatory standards. Based on inspection and testing outcomes, applications proceed through approval, conditional approval, re-inspection, or rejection processes managed by the certification committee. The platform also facilitates conditional compliance management by enabling applicants to submit corrective evidence and allowing officials to verify compliance before final decisions. Integrated payment processing automates license fee collection and verification prior to license issuance. The system further provides automated document management, notification services, workflow tracking, and audit trails to ensure transparency, accountability, and efficient collaboration among all stakeholders. By digitizing every stage of the certification process, the solution minimizes manual intervention, improves operational efficiency, enhances regulatory compliance, ensures complete process traceability, and delivers faster, more transparent licensing services for both applicants and regulatory authorities.

Fig: Workflow diagram of CM Scope Brand Inclusion Service

## Module-1. Application Submission (Total Feature - 5)

**Feature Description**

**1. Online License Application:**

Enables applicants to submit mandatory license applications through a secure online portal.

**2. Initial Questionnaire:**

Collects preliminary business, product, and compliance information required for application assessment.

**3. Application Fee Payment:**

Allows applicants to pay the prescribed application fee through integrated payment channels.

**4. Application Submission:**

Finalizes and submits the completed application for official processing.

**5. Application Tracking:**

Allows applicants to monitor the real-time status of their submitted applications.

## Module-2. Application Review & Shortfall Management (Total Feature - 8)

**Feature Description**

**1. Director Review:**

Enables the Director to review applications and provide approval comments or decisions.

**2. DD Review:**

Supports Deputy Director review and recommendation during application processing.

**3. AD Review:**

Allows the Assistant Director to perform detailed application verification.

**4. Inspector Assignment:**

Assigns the appropriate inspector for application assessment.

**5. Application Review:**

Reviews submitted documents for completeness and regulatory compliance.

**6. Shortfall Identification:**

Identifies missing documents or compliance deficiencies.

**7. Shortfall Notification:**

Notifies applicants about identified deficiencies requiring correction.

**8. Customer Resubmission:**

Allows applicants to resubmit corrected documents and information.

## Module-3. Inspection Planning (Total Feature - 4)

**Feature Description**

**1. Inspector Assignment:**

Assigns inspectors based on workload, expertise, and jurisdiction.

**2. Man-Day Calculation (System Generated):**

Automatically calculates the required inspection effort based on predefined rules.

**3. Inspection Schedule:**

Creates inspection schedules for assigned inspectors.

**4. Inspection Date Management:**

Manages inspection dates, rescheduling, and calendar updates.

## Module-4. Primary Inspection (Total Feature - 5)

**Feature Description**

**1. Primary Site Visit:**

Records the initial site inspection conducted by inspectors.

**2. Primary Inspection Report:**

Generates a report containing preliminary inspection findings.

**3. Observation Recording:**

Captures observations and non-conformities identified during inspection.

**4. Customer Feedback Request:**

Requests clarification or feedback from applicants regarding inspection observations.

**5. Evidence Submission:**

Allows applicants to upload supporting evidence for inspection findings.

## Module-5. Formal Inspection (Total Feature - 5)

**Feature Description**

**1. Formal Inspection Scheduling:**

Schedules official compliance inspections.

**2. Formal Site Inspection:**

Records detailed inspection activities conducted at the applicant's premises.

**3. Formal Inspection Report:**

Generates the official inspection report following completion.

**4. Sample Collection:**

Records samples collected for laboratory testing.

**5. Sample Handover to AD:**

Tracks the secure handover of collected samples to the Assistant Director.

## Module-6. Laboratory Testing (Total Feature - 5)

**Feature Description**

**1. Sample Forwarding to Lab:**

Forwards collected samples to the designated laboratory.

**2. Sample Registration:**

Registers laboratory samples with unique identification numbers.

**3. Resampling Request:**

Initiates additional sample collection when required.

**4. Test Execution:**

Performs laboratory testing according to approved standards.

**5. Test Report Generation:**

Generates official laboratory test reports.

## Module-7. Technical Evaluation (Total Feature - 4)

**Feature Description**

**1. Test Report Review:**

Reviews laboratory test results for technical accuracy.

**2. Inspection Report Compilation:**

Consolidates inspection findings for evaluation.

**3. Evaluation Report Generation:**

Produces comprehensive technical evaluation reports.

**4. Technical Recommendation:**

Provides recommendations for approval, rejection, or further action.

## Module-8. Verification & Approval (Total Feature - 5)

**Feature Description**

**1. DD Verification:**

Enables the Deputy Director to verify evaluation results.

**2. Evaluation Checklist:**

Validates compliance using standardized evaluation checklists.

**3. Director Approval:**

Allows the Director to provide final administrative approval.

**4. Workflow Remarks:**

Records comments and observations throughout the approval process.

**5. Approval History:**

Maintains a complete history of approval decisions.

## Module-9. Certification Committee (Total Feature - 5)

**Feature Description**

**1. Committee Review:**

Facilitates committee evaluation of completed applications.

**2. Final Approval:**

Grants final certification approval.

**3. Conditional Approval:**

Approves applications subject to specified compliance conditions.

**4. Re-inspection Decision:**

Determines whether additional inspections are required.

**5. Application Rejection:**

Rejects applications that fail to meet regulatory requirements.

## Module-10. Conditional Compliance (Total Feature - 5)

**Feature Description**

**1. Condition Notification:**

Notifies applicants of conditions that must be fulfilled.

**2. Customer Compliance Submission:**

Allows applicants to submit compliance evidence.

**3. Evidence Upload:**

Supports uploading documents required for compliance verification.

**4. Compliance Verification:**

Reviews submitted evidence to verify compliance.

**5. Re-verification Request:**

Initiates additional verification when necessary.

## Module-11. Payment Processing (Total Feature - 5)

**Feature Description**

**1. License Fee Request:**

Generates the payable license fee request.

**2. Payment Notification:**

Notifies applicants regarding pending payments.

**3. License Fee Collection:**

Records license fee payments from applicants.

**4. Payment Verification:**

Verifies payment through the integrated payment gateway.

**5. Payment Confirmation:**

Confirms successful payment before license issuance.

## Module-12. License Management (Total Feature - 5)

**Feature Description**

**1. License Generation:**

Generates the approved digital license.

**2. License Number Generation:**

Automatically assigns a unique license number.

**3. License Issuance:**

Issues the approved license to the applicant.

**4. License Download:**

Allows applicants to download issued licenses.

**5. License Record Management:**

Maintains a centralized repository of all issued licenses.

## Module-13. Refusal & Rejection Management (Total Feature - 4)

**Feature Description**

**1. Refusal Letter Preparation:**

Prepares official refusal letters for unsuccessful applications.

**2. Rejection Letter Generation:**

Generates rejection letters with documented reasons.

**3. Approval Workflow for Refusal:**

Routes refusal documents through the approval process.

**4. Customer Notification:**

Notifies applicants of refusal or rejection decisions.

## Module-14. Notification (Total Feature - 6)

**Feature Description**

**1. Shortfall Notification:**

Sends alerts regarding missing documents or deficiencies.

**2. Inspection Schedule Notification:**

Notifies applicants about inspection schedules.

**3. Payment Request Notification:**

Informs applicants when payments are due.

**4. Conditional Approval Notification:**

Communicates conditional approval decisions.

**5. License Issued Notification:**

Notifies applicants after license issuance.

**6. Rejection/Refusal Notification:**

Informs applicants of rejection or refusal outcomes.

## Module-15. Workflow & Task Management (Total Feature - 5)

**Feature Description**

**1. Role-based Task Assignment:**

Assigns workflow tasks according to user roles and responsibilities.

**2. Application Forwarding:**

Routes applications to the next stage of the workflow.

**3. Status Tracking:**

Tracks application progress throughout the certification lifecycle.

**4. Workflow Remarks:**

Records comments and decisions during workflow execution.

**5. Audit Trail:**

Maintains a complete history of all workflow activities for transparency and accountability.

## Module-16. Document Management (Total Feature - 7)

**Feature Description**

**1. Questionnaire Management:**

Stores and manages completed application questionnaires.

**2. Inspection Report Management:**

Maintains inspection reports in a centralized repository.

**3. Test Report Management:**

Stores laboratory test reports for future reference.

**4. Evaluation Report Management:**

Manages technical evaluation reports.

**5. Evidence Upload:**

Supports secure uploading and storage of supporting documents.

**6. Refusal Letter Management:**

Maintains official refusal and rejection documents.

**7. License Document Storage:**

Stores issued licenses and related documents in a centralized digital repository.

## Service-11: CM HALAL CERTIFICATION

The proposed **CM Hala Certificate Management System** is a comprehensive digital platform designed to automate and manage the complete certification lifecycle, from online application submission to certificate issuance. The solution enables applicants to submit certificate applications, complete initial questionnaires, and monitor application progress through a centralized online portal. Applications undergo a structured multi-level review process involving Assistant Director (AD), Deputy Director (DD), and Director verification, with integrated shortfall management to ensure complete and accurate submissions. The system supports Stage-1 and Stage-2 audit management, including auditor assignment, audit scheduling, observation recording, compliance monitoring, and sample collection. Laboratory testing is seamlessly integrated to manage sample registration, testing, resampling, and report generation. Technical evaluations consolidate audit findings and laboratory results to produce recommendations for management approval. The certification committee reviews evaluation outcomes and determines final approval, conditional approval, re-inspection, or rejection. Conditional compliance workflows enable applicants to submit corrective actions and supporting evidence before final certification. The solution also automates payment processing, digital certificate generation, certificate issuance, and record management. Supporting modules such as workflow management, document management, and automated notifications ensure transparency, traceability, and efficient communication throughout the certification process. By digitizing every stage of the certification lifecycle, the system improves operational efficiency, reduces manual processing, enhances regulatory compliance, and delivers faster, more transparent certification services.

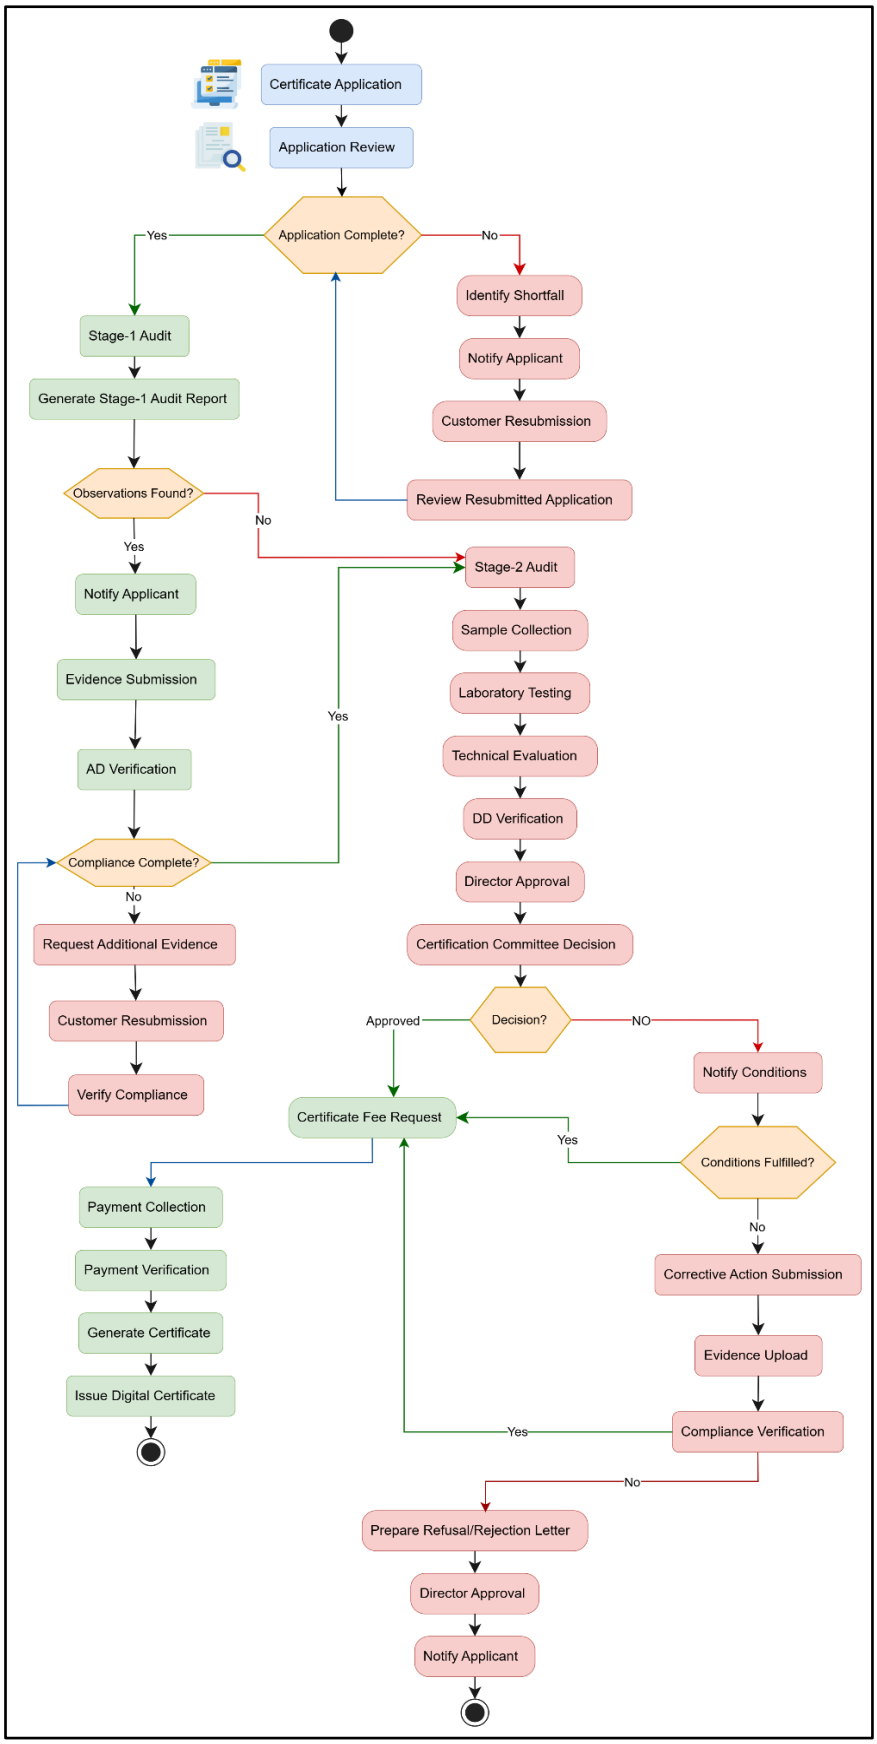

Fig: CM Halal New Certification Workflow

## Module-1. Certificate Application (Total Feature - 4)

**Feature Description**

**1. Online Certificate Application:**

Enables applicants to submit certificate applications electronically.

**2. Initial Questionnaire:**

Collects preliminary organizational and product information required for assessment.

**3. Application Submission:**

Finalizes and submits the completed application for review.

**4. Application Tracking:**

Allows applicants to monitor the progress of their submitted applications.

## Module-2. Application Review & Shortfall Management (Total Feature - 8)

**Feature Description**

**1. Director Review:**

Enables Director-level review and approval recommendations.

**2. DD Review:**

Supports Deputy Director verification of submitted applications.

**3. AD Review:**

Allows Assistant Director to perform detailed document verification.

**4. Inspector Assignment:**

Assigns inspectors or auditors for audit activities.

**5. Application Review:**

Reviews submitted documents for completeness and compliance.

**6. Shortfall Identification:**

Identifies missing documents or compliance issues.

**7. Shortfall Notification:**

Notifies applicants about deficiencies requiring correction.

**8. Customer Resubmission:**

Allows applicants to submit corrected information and documents.

## Module-3. Stage-1 Audit Management (Total Feature - 6)

**Feature Description**

**1. Stage-1 Audit Scheduling:**

Plans and schedules the initial audit.

**2. Auditor/Inspector Assignment:**

Assigns qualified auditors or inspectors.

**3. Stage-1 Audit Execution:**

Records audit activities conducted during Stage-1.

**4. Stage-1 Audit Report Generation:**

Generates the official Stage-1 audit report.

**5. Observation Recording:**

Captures audit observations and findings.

**6. Audit Findings:**

Records non-conformities and audit conclusions.

## Module-4. Audit Observation & Compliance (Total Feature - 4)

**Feature Description**

**1. Observation Notification:**

Notifies applicants regarding audit observations.

**2. Evidence Submission:**

Allows applicants to upload corrective evidence.

**3. Evidence Verification by AD:**

Enables Assistant Director to verify submitted evidence.

**4. Compliance Tracking:**

Tracks corrective action progress until closure.

## Module-5. Stage-2 Audit & Sample Management (Total Feature - 5)

**Feature Description**

**1. Stage-2 Audit Scheduling:**

Schedules the final certification audit.

**2. Stage-2 Audit Execution:**

Conducts the Stage-2 audit.

**3. Stage-2 Audit Report Generation:**

Generates the Stage-2 audit report.

**4. Sample Collection:**

Records sample collection during the audit.

**5. Sample Handover to AD:**

Tracks sample handover for laboratory processing.

## Module-6. Laboratory Testing (Total Feature - 5)

**Feature Description**

**1. Sample Forwarding to Laboratory:**

Sends collected samples to the laboratory.

**2. Sample Registration:**

Registers samples with unique tracking identifiers.

**3. Resampling Request:**

Requests additional samples when necessary.

**4. Test Execution:**

Performs laboratory testing according to approved standards.

**5. Test Report Generation:**

Produces official laboratory test reports.

## Module-7. Technical Evaluation (Total Feature - 4)

**Feature Description**

**1. Test Report Review:**

Reviews laboratory testing results.

**2. Audit Report Compilation:**

Consolidates audit findings into a technical assessment.

**3. Technical Report Generation:**

Generates the official technical evaluation report.

**4. Technical Recommendation:**

Provides recommendations for approval or rejection.

## Module-8. Verification & Approval (Total Feature - 5)

**Feature Description**

**1. DD Verification:**

Verifies technical evaluation results.

**2. Technical Checklist Preparation:**

Prepares standardized evaluation checklists.

**3. Director Approval:**

Enables final approval by the Director.

**4. Workflow Remarks:**

Records review comments and observations.

**5. Approval History:**

Maintains a complete history of approvals.

## Module-9. Certification Committee (Total Feature - 5)

**Feature Description**

**1. Committee Review:**

Facilitates committee review of evaluated applications.

**2. Final Approval:**

Grants final certification approval.

**3. Conditional Approval:**

Approves applications with specified conditions.

**4. Re-inspection Decision:**

Determines whether another audit is required.

**5. Application Rejection:**

Rejects applications that fail to meet certification requirements.

## Module-10. Conditional Compliance (Total Feature - 5)

**Feature Description**

**1. Conditional Issue Notification:**

Notifies applicants of approval conditions.

**2. Corrective Action Submission:**

Allows applicants to submit corrective actions.

**3. Evidence Upload:**

Supports uploading compliance evidence.

**4. Compliance Verification:**

Verifies submitted corrective actions.

**5. Re-verification Request:**

Initiates additional verification when required.

## Module-11. Payment Processing (Total Feature - 5)

**Feature Description**

**1. Certificate/License Fee Request:**

Generates payment requests.

**2. Payment Notification:**

Notifies applicants regarding pending payments.

**3. Payment Collection:**

Records payment received.

**4. Payment Verification:**

Verifies payment through integrated payment services.

**5. Payment Confirmation:**

Confirms successful payment.

## Module-12. Certificate / License Management (Total Feature - 5)

**Feature Description**

**1. Certificate/License Generation:**

Generates approved certificates or licenses.

**2. Certificate Number Generation:**

Automatically assigns unique certificate numbers.

**3. Digital Certificate Issuance:**

Issues digitally signed certificates.

**4. Certificate Download:**

Allows applicants to download certificates.

**5. Certificate Record Management:**

Maintains centralized certificate records.

## Module-13. Refusal & Rejection Management (Total Feature - 5)

**Feature Description**

**1. Refusal Letter Preparation:**

Prepares official refusal letters.

**2. Rejection Letter Generation:**

Generates rejection letters.

**3. Refusal Verification:**

Verifies refusal decisions before issuance.

**4. Director Approval:**

Obtains Director approval for refusals.

**5. Customer Notification:**

Notifies applicants of refusal or rejection.

## Module-14. Notification (Total Feature - 7)

**Feature Description**

**1. Shortfall Notification:**

Sends notifications regarding missing documents.

**2. Audit Schedule Notification:**

Informs applicants about audit schedules.

**3. Observation Notification:**

Notifies applicants of audit findings.

**4. Payment Request Notification:**

Sends payment reminders.

**5. Conditional Approval Notification:**

Notifies applicants of conditional approvals.

**6. Certificate Issued Notification:**

Confirms certificate issuance.

**7. Rejection/Refusal Notification:**

Notifies applicants of rejection decisions.

## Module-15. Workflow & Task Management (Total Feature - 6)

**Feature Description**

**1. Role-based Task Assignment:**

Assigns tasks according to user roles.

**2. Multi-Level Workflow:**

Supports hierarchical approval workflows.

**3. Application Forwarding:**

Routes applications between workflow stages.

**4. Status Tracking:**

Tracks the progress of every application.

**5. Workflow Remarks:**

Records workflow comments.

**6. Audit Trail:**

Maintains a complete audit history.

## Module-16. Document Management (Total Feature - 7)

**Feature Description**

**1. Questionnaire Management:**

Stores application questionnaires.

**2. Audit Report Management:**

Maintains audit reports.

**3. Test Report Management:**

Stores laboratory reports.

**4. Technical Report Management:**

Maintains technical evaluation reports.

**5. Evidence Upload:**

Stores compliance evidence.

**6. Refusal Letter Management:**

Maintains refusal and rejection letters.

**7. Certificate Repository:**

Stores issued certificates in a centralized repository.

## Module-2. Application Review & Shortfall Management (Total Feature - 8)

**Feature Description**

**1. Director Review:**

Enables Director-level review and approval recommendations.

**2. DD Review:**

Supports Deputy Director verification of submitted applications.

**3. AD Review:**

Allows Assistant Director to perform detailed document verification.

**4. Inspector Assignment:**

Assigns inspectors or auditors for audit activities.

**5. Application Review:**

Reviews submitted documents for completeness and compliance.

**6. Shortfall Identification:**

Identifies missing documents or compliance issues.

**7. Shortfall Notification:**

Notifies applicants about deficiencies requiring correction.

**8. Customer Resubmission:**

Allows applicants to submit corrected information and documents.

## Module-3. Stage-1 Audit Management (Total Feature - 6)

**Feature Description**

**1. Stage-1 Audit Scheduling:**

Plans and schedules the initial audit.

**2. Auditor/Inspector Assignment:**

Assigns qualified auditors or inspectors.

**3. Stage-1 Audit Execution:**

Records audit activities conducted during Stage-1.

**4. Stage-1 Audit Report Generation:**

Generates the official Stage-1 audit report.

**5. Observation Recording:**

Captures audit observations and findings.

**6. Audit Findings:**

Records non-conformities and audit conclusions.

## Module-4. Audit Observation & Compliance (Total Feature - 4)

**Feature Description**

**1. Observation Notification:**

Notifies applicants regarding audit observations.

**2. Evidence Submission:**

Allows applicants to upload corrective evidence.

**3. Evidence Verification by AD:**

Enables Assistant Director to verify submitted evidence.

**4. Compliance Tracking:**

Tracks corrective action progress until closure.

## Module-5. Stage-2 Audit & Sample Management (Total Feature - 5)

**Feature Description**

**1. Stage-2 Audit Scheduling:**

Schedules the final certification audit.

**2. Stage-2 Audit Execution:**

Conducts the Stage-2 audit.

**3. Stage-2 Audit Report Generation:**

Generates the Stage-2 audit report.

**4. Sample Collection:**

Records sample collection during the audit.

**5. Sample Handover to AD:**

Tracks sample handover for laboratory processing.

## Module-6. Laboratory Testing (Total Feature - 5)

**Feature Description**

**1. Sample Forwarding to Laboratory:**

Sends collected samples to the laboratory.

**2. Sample Registration:**

Registers samples with unique tracking identifiers.

**3. Resampling Request:**

Requests additional samples when necessary.

**4. Test Execution:**

Performs laboratory testing according to approved standards.

**5. Test Report Generation:**

Produces official laboratory test reports.

## Module-7. Technical Evaluation (Total Feature - 4)

**Feature Description**

**1. Test Report Review:**

Reviews laboratory testing results.

**2. Audit Report Compilation:**

Consolidates audit findings into a technical assessment.

**3. Technical Report Generation:**

Generates the official technical evaluation report.

**4. Technical Recommendation:**

Provides recommendations for approval or rejection.

## Module-8. Verification & Approval (Total Feature - 5)

**Feature Description**

**1. DD Verification:**

Verifies technical evaluation results.

**2. Technical Checklist Preparation:**

Prepares standardized evaluation checklists.

**3. Director Approval:**

Enables final approval by the Director.

**4. Workflow Remarks:**

Records review comments and observations.

**5. Approval History:**

Maintains a complete history of approvals.

## Module-9. Certification Committee (Total Feature - 5)

**Feature Description**

**1. Committee Review:**

Facilitates committee review of evaluated applications.

**2. Final Approval:**

Grants final certification approval.

**3. Conditional Approval:**

Approves applications with specified conditions.

**4. Re-inspection Decision:**

Determines whether another audit is required.

**5. Application Rejection:**

Rejects applications that fail to meet certification requirements.

## Module-10. Conditional Compliance (Total Feature - 5)

**Feature Description**

**1. Conditional Issue Notification:**

Notifies applicants of approval conditions.

**2. Corrective Action Submission:**

Allows applicants to submit corrective actions.

**3. Evidence Upload:**

Supports uploading compliance evidence.

**4. Compliance Verification:**

Verifies submitted corrective actions.

**5. Re-verification Request:**

Initiates additional verification when required.

## Module-11. Payment Processing (Total Feature - 5)

**Feature Description**

**1. Certificate/License Fee Request:**

Generates payment requests.

**2. Payment Notification:**

Notifies applicants regarding pending payments.

**3. Payment Collection:**

Records payment received.

**4. Payment Verification:**

Verifies payment through integrated payment services.

**5. Payment Confirmation:**

Confirms successful payment.

## Module-12. Certificate / License Management (Total Feature - 5)

**Feature Description**

**1. Certificate/License Generation:**

Generates approved certificates or licenses.

**2. Certificate Number Generation:**

Automatically assigns unique certificate numbers.

**3. Digital Certificate Issuance:**

Issues digitally signed certificates.

**4. Certificate Download:**

Allows applicants to download certificates.

**5. Certificate Record Management:**

Maintains centralized certificate records.

## Module-13. Refusal & Rejection Management (Total Feature - 5)

**Feature Description**

**1. Refusal Letter Preparation:**

Prepares official refusal letters.

**2. Rejection Letter Generation:**

Generates rejection letters.

**3. Refusal Verification:**

Verifies refusal decisions before issuance.

**4. Director Approval:**

Obtains Director approval for refusals.

**5. Customer Notification:**

Notifies applicants of refusal or rejection.

## Module-14. Notification (Total Feature - 7)

**Feature Description**

**1. Shortfall Notification:**

Sends notifications regarding missing documents.

**2. Audit Schedule Notification:**

Informs applicants about audit schedules.

**3. Observation Notification:**

Notifies applicants of audit findings.

**4. Payment Request Notification:**

Sends payment reminders.

**5. Conditional Approval Notification:**

Notifies applicants of conditional approvals.

**6. Certificate Issued Notification:**

Confirms certificate issuance.

**7. Rejection/Refusal Notification:**

Notifies applicants of rejection decisions.

## Module-15. Workflow & Task Management (Total Feature - 6)

**Feature Description**

**1. Role-based Task Assignment:**

Assigns tasks according to user roles.

**2. Multi-Level Workflow:**

Supports hierarchical approval workflows.

**3. Application Forwarding:**

Routes applications between workflow stages.

**4. Status Tracking:**

Tracks the progress of every application.

**5. Workflow Remarks:**

Records workflow comments.

**6. Audit Trail:**

Maintains a complete audit history.

## Module-16. Document Management (Total Feature - 7)

**Feature Description**

**1. Questionnaire Management:**

Stores application questionnaires.

**2. Audit Report Management:**

Maintains audit reports.

**3. Test Report Management:**

Stores laboratory reports.

**4. Technical Report Management:**

Maintains technical evaluation reports.

**5. Evidence Upload:**

Stores compliance evidence.

**6. Refusal Letter Management:**

Maintains refusal and rejection letters.

**7. Certificate Repository:**

Stores issued certificates in a centralized repository.

## Service-13: CM Halal Brand Inclusion

The proposed **CM Hala Certificate Management System** is a comprehensive digital platform designed to automate and manage the complete certification lifecycle, from online application submission to certificate issuance. The solution enables applicants to submit certificate applications, complete initial questionnaires, and monitor application progress through a centralized online portal. Applications undergo a structured multi-level review process involving Assistant Director (AD), Deputy Director (DD), and Director verification, with integrated shortfall management to ensure complete and accurate submissions. The system supports Stage-1 and Stage-2 audit management, including auditor assignment, audit scheduling, observation recording, compliance monitoring, and sample collection. Laboratory testing is seamlessly integrated to manage sample registration, testing, resampling, and report generation. Technical evaluations consolidate audit findings and laboratory results to produce recommendations for management approval. The certification committee reviews evaluation outcomes and determines final approval, conditional approval, re-inspection, or rejection. Conditional compliance workflows enable applicants to submit corrective actions and supporting evidence before final certification. The solution also automates payment processing, digital certificate generation, certificate issuance, and record management. Supporting modules such as workflow management, document management, and automated notifications ensure transparency, traceability, and efficient communication throughout the certification process. By digitizing every stage of the certification lifecycle, the system improves operational efficiency, reduces manual processing, enhances regulatory compliance, and delivers faster, more transparent certification services.

## Service- 21: CM HALAL BRAND INCLUSION

Detailed End-to-End Certification Workflow

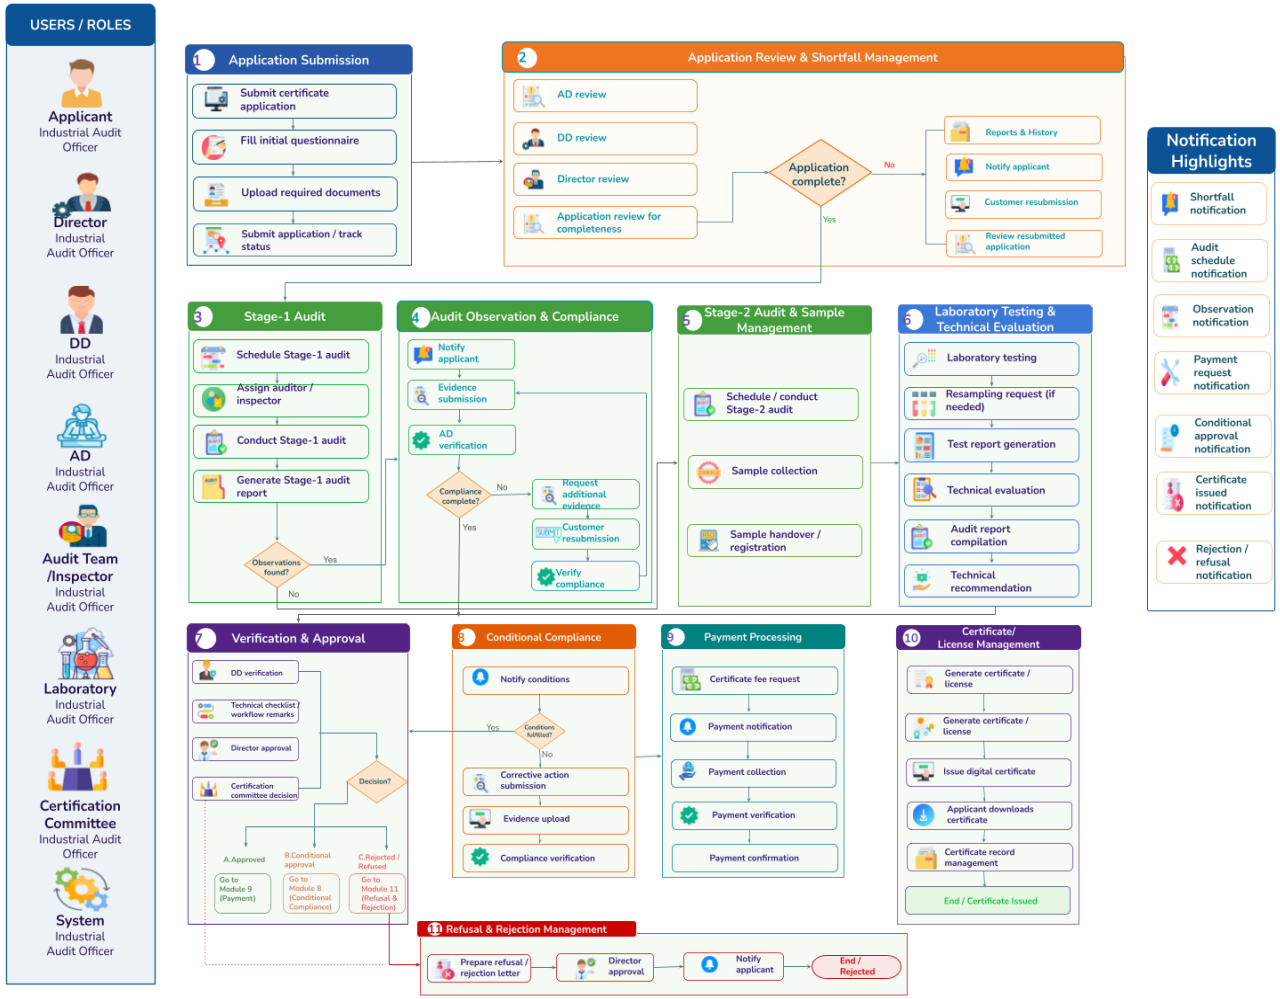

Fig: CM Halal Brand Inclusion Service Workflow

## Module-1. Certificate Application (Total Feature - 4)

**Feature Description**

**1. Online Certificate Application:**

Enables applicants to submit certificate applications electronically.

**2. Initial Questionnaire:**

Collects preliminary organizational and product information required for assessment.

**3. Application Submission:**

Finalizes and submits the completed application for review.

**4. Application Tracking:**

Allows applicants to monitor the progress of their submitted applications.

## Module-2. Application Review & Shortfall Management (Total Feature - 8)

**Feature Description**

**1. Director Review:**

Enables Director-level review and approval recommendations.

**2. DD Review:**

Supports Deputy Director verification of submitted applications.

**3. AD Review:**

Allows Assistant Director to perform detailed document verification.

**4. Inspector Assignment:**

Assigns inspectors or auditors for audit activities.

**5. Application Review:**

Reviews submitted documents for completeness and compliance.

**6. Shortfall Identification:**

Identifies missing documents or compliance issues.

**7. Shortfall Notification:**

Notifies applicants about deficiencies requiring correction.

**8. Customer Resubmission:**

Allows applicants to submit corrected information and documents.

## Module-3. Stage-1 Audit Management (Total Feature - 6)

**Feature Description**

**1. Stage-1 Audit Scheduling:**

Plans and schedules the initial audit.

**2. Auditor/Inspector Assignment:**

Assigns qualified auditors or inspectors.

**3. Stage-1 Audit Execution:**

Records audit activities conducted during Stage-1.

**4. Stage-1 Audit Report Generation:**

Generates the official Stage-1 audit report.

**5. Observation Recording:**

Captures audit observations and findings.

**6. Audit Findings:**

Records non-conformities and audit conclusions.

## Module-4. Audit Observation & Compliance (Total Feature - 4)

**Feature Description**

**1. Observation Notification:**

Notifies applicants regarding audit observations.

**2. Evidence Submission:**

Allows applicants to upload corrective evidence.

**3. Evidence Verification by AD:**

Enables Assistant Director to verify submitted evidence.

**4. Compliance Tracking:**

Tracks corrective action progress until closure.

## Module-5. Stage-2 Audit & Sample Management (Total Feature - 5)

**Feature Description**

**1. Stage-2 Audit Scheduling:**

Schedules the final certification audit.

**2. Stage-2 Audit Execution:**

Conducts the Stage-2 audit.

**3. Stage-2 Audit Report Generation:**

Generates the Stage-2 audit report.

**4. Sample Collection:**

Records sample collection during the audit.

**5. Sample Handover to AD:**

Tracks sample handover for laboratory processing.

## Module-6. Laboratory Testing (Total Feature - 5)

**Feature Description**

**1. Sample Forwarding to Laboratory:**

Sends collected samples to the laboratory.

**2. Sample Registration:**

Registers samples with unique tracking identifiers.

**3. Resampling Request:**

Requests additional samples when necessary.

**4. Test Execution:**

Performs laboratory testing according to approved standards.

**5. Test Report Generation:**

Produces official laboratory test reports.

## Module-7. Technical Evaluation (Total Feature - 4)

**Feature Description**

**1. Test Report Review:**

Reviews laboratory testing results.

**2. Audit Report Compilation:**

Consolidates audit findings into a technical assessment.

**3. Technical Report Generation:**

Generates the official technical evaluation report.

**4. Technical Recommendation:**

Provides recommendations for approval or rejection.

## Module-8. Verification & Approval (Total Feature - 5)

**Feature Description**

**1. DD Verification:**

Verifies technical evaluation results.

**2. Technical Checklist Preparation:**

Prepares standardized evaluation checklists.

**3. Director Approval:**

Enables final approval by the Director.

**4. Workflow Remarks:**

Records review comments and observations.

**5. Approval History:**

Maintains a complete history of approvals.

## Module-9. Certification Committee (Total Feature - 5)

**Feature Description**

**1. Committee Review:**

Facilitates committee review of evaluated applications.

**2. Final Approval:**

Grants final certification approval.

**3. Conditional Approval:**

Approves applications with specified conditions.

**4. Re-inspection Decision:**

Determines whether another audit is required.

**5. Application Rejection:**

Rejects applications that fail to meet certification requirements.

## Module-10. Conditional Compliance (Total Feature - 5)

**Feature Description**

**1. Conditional Issue Notification:**

Notifies applicants of approval conditions.

**2. Corrective Action Submission:**

Allows applicants to submit corrective actions.

**3. Evidence Upload:**

Supports uploading compliance evidence.

**4. Compliance Verification:**

Verifies submitted corrective actions.

**5. Re-verification Request:**

Initiates additional verification when required.

## Module-11. Payment Processing (Total Feature - 5)

**Feature Description**

**1. Certificate/License Fee Request:**

Generates payment requests.

**2. Payment Notification:**

Notifies applicants regarding pending payments.

**3. Payment Collection:**

Records payment received.

**4. Payment Verification:**

Verifies payment through integrated payment services.

**5. Payment Confirmation:**

Confirms successful payment.

## Module-12. Certificate / License Management (Total Feature - 5)

**Feature Description**

**1. Certificate/License Generation:**

Generates approved certificates or licenses.

**2. Certificate Number Generation:**

Automatically assigns unique certificate numbers.

**3. Digital Certificate Issuance:**

Issues digitally signed certificates.

**4. Certificate Download:**

Allows applicants to download certificates.

**5. Certificate Record Management:**

Maintains centralized certificate records.

## Module-13. Refusal & Rejection Management (Total Feature - 5)

**Feature Description**

**1. Refusal Letter Preparation:**

Prepares official refusal letters.

**2. Rejection Letter Generation:**

Generates rejection letters.

**3. Refusal Verification:**

Verifies refusal decisions before issuance.

**4. Director Approval:**

Obtains Director approval for refusals.

**5. Customer Notification:**

Notifies applicants of refusal or rejection.

## Module-14. Notification (Total Feature - 7)

**Feature Description**

**1. Shortfall Notification:**

Sends notifications regarding missing documents.

**2. Audit Schedule Notification:**

Informs applicants about audit schedules.

**3. Observation Notification:**

Notifies applicants of audit findings.

**4. Payment Request Notification:**

Sends payment reminders.

**5. Conditional Approval Notification:**

Notifies applicants of conditional approvals.

**6. Certificate Issued Notification:**

Confirms certificate issuance.

**7. Rejection/Refusal Notification:**

Notifies applicants of rejection decisions.

## Module-15. Workflow & Task Management (Total Feature - 6)

**Feature Description**

**1. Role-based Task Assignment:**

Assigns tasks according to user roles.

**2. Multi-Level Workflow:**

Supports hierarchical approval workflows.

**3. Application Forwarding:**

Routes applications between workflow stages.

**4. Status Tracking:**

Tracks the progress of every application.

**5. Workflow Remarks:**

Records workflow comments.

**6. Audit Trail:**

Maintains a complete audit history.

## Module-16. Document Management (Total Feature - 7)

**Feature Description**

**1. Questionnaire Management:**

Stores application questionnaires.

**2. Audit Report Management:**

Maintains audit reports.

**3. Test Report Management:**

Stores laboratory reports.

**4. Technical Report Management:**

Maintains technical evaluation reports.

**5. Evidence Upload:**

Stores compliance evidence.

**6. Refusal Letter Management:**

Maintains refusal and rejection letters.

**7. Certificate Repository:**

Stores issued certificates in a centralized repository.

## Service-14: Chemical Testing Feature Description

The proposed Chemical Wing Testing Service Management System is a comprehensive digital platform designed to automate and manage the complete laboratory testing lifecycle, from sample registration to final report delivery. The system generates unique sample tracking IDs, automatic serial numbers, and fiscal year-based sequences while ensuring complete sample traceability throughout the testing process.

The solution supports resample and re-test management through structured workflow loops, enabling sample resubmission, reassignment, and updated test results. A multi-level verification process allows Examiners, Deputy Directors, and Directors to review, verify, approve, or return reports for correction through an efficient desk-to-desk workflow. Secure sample handling, data encryption, confidential information protection, and role-based access control ensure compliance with security and regulatory requirements.

The system provides real-time email, SMS, and in-app notifications, enabling applicants and officials to monitor testing progress. Users can record remarks, verification comments, review notes, and change instructions at every stage of the workflow. Additional capabilities include automated PDF report generation with digital signature support, controlled report delivery based on applicant type, advanced search and filtering, role-based task management, operational dashboards, comprehensive audit trails, and configurable workflow management. With bilingual Bangla and English support, multiple role assignments, and dedicated workflows for both Head Office and Regional Offices, the system enhances operational efficiency, transparency, accuracy, and accountability in the Chemical Wing Testing Service.

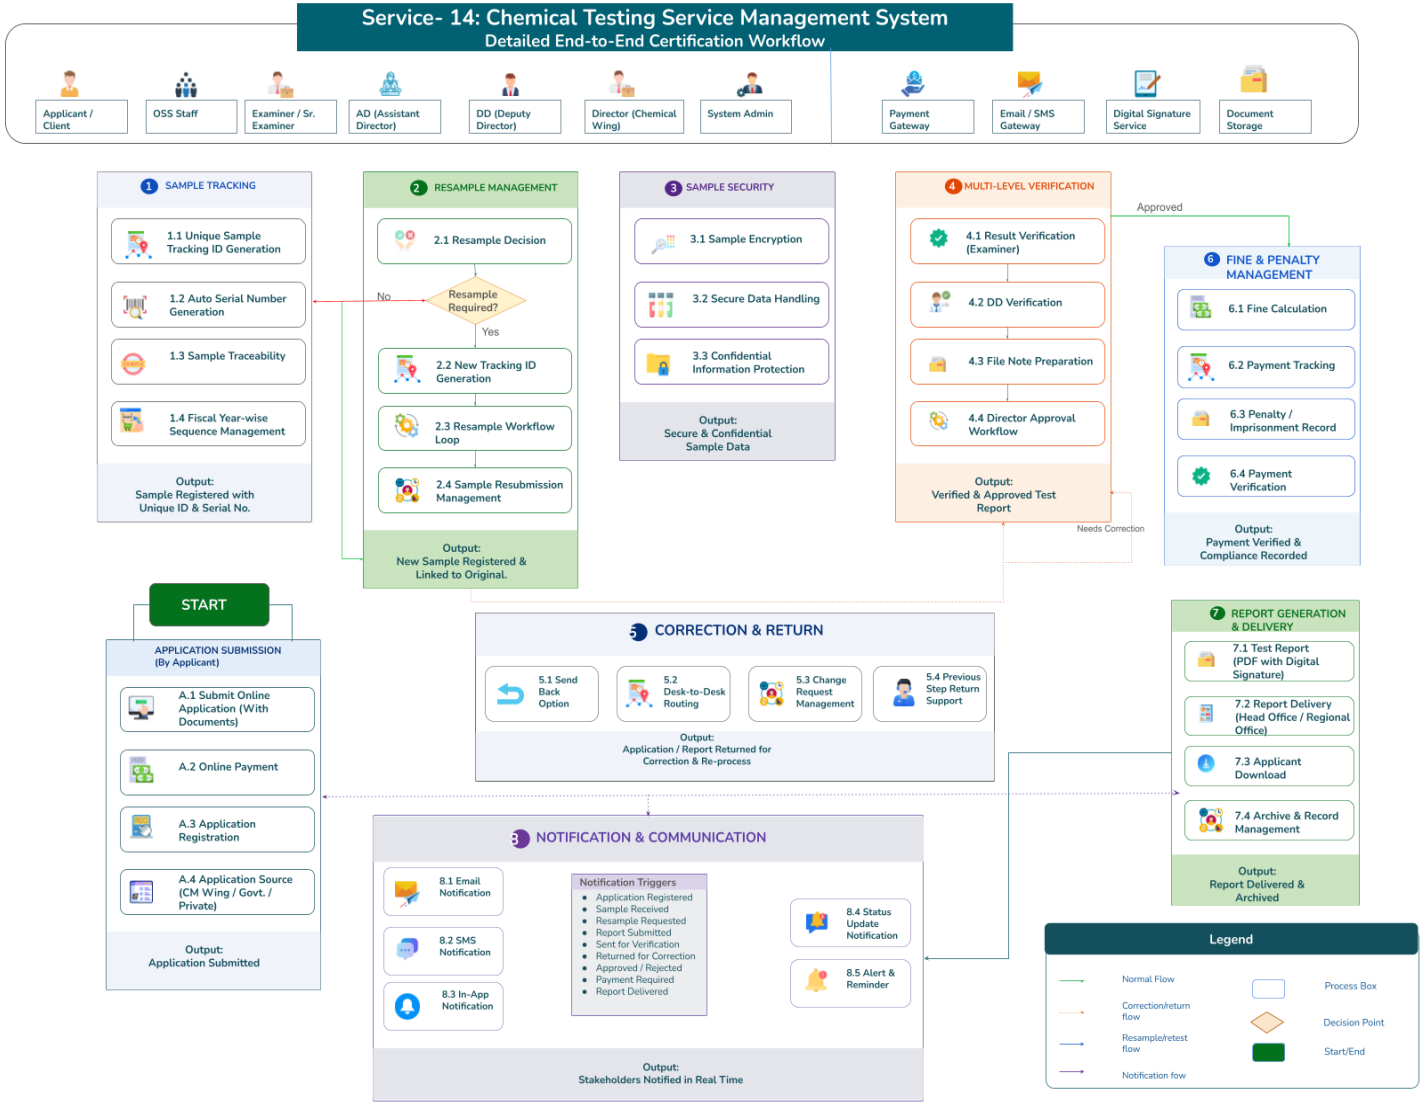

Figure Name: Workflow of Chemical Testing Service

## Module-1. Sample Tracking (Total Feature - 4)

**Features Description**

**1. Unique Sample Tracking ID Generation**

Automatically generates a unique tracking ID for every registered sample to ensure accurate identification and tracking throughout the testing lifecycle.

**2. Auto Serial Number Generation**

Generates sequential serial numbers automatically based on predefined business rules, eliminating manual numbering errors.

**3. Sample Traceability**

Maintains complete traceability of each sample by recording every movement, processing stage, and responsible user within the system.

**4. Fiscal Year-wise Sequence Management**

Manages sample numbering sequences separately for each fiscal year to ensure organized record-keeping and regulatory compliance.

## Module-2. Resample Management (Total Feature - 4)

**Features Description**

**1. Resample Decision**

Allows authorized officials to initiate a resample process when the original sample is found unsuitable or requires further verification.

**2. New Tracking ID Generation**

Automatically generates a new tracking ID for each resubmitted sample while maintaining linkage with the original application.

**3. Resample Workflow Loop**

Supports a complete resample workflow by routing the application through the required processing stages until completion.

**4. Sample Re-submission Management**

Enables applicants or authorized personnel to submit replacement samples while preserving previous submission history.

## Module-3. Sample Security (Total Feature - 3)

**Features Description**

**1. Sample Encryption**

Secures sensitive sample information using encryption techniques to prevent unauthorized access during processing and storage.

**2. Secure Data Handling**

Ensures that all sample-related data is processed, transferred, and stored following established security standards.

### 3. Confidential Information Protection

Protects confidential laboratory and applicant information through controlled access and secure data management practices.

## Module-4. Multi-Level Verification (Total Feature - 4)

**Features Description**

### 1. Result Verification

Allows designated officers to verify laboratory test results before proceeding to the next approval stage.

### 2. DD Verification

Enables the Deputy Director (DD) to review and validate verified test reports for regulatory compliance.

### 3. File Note Preparation

Allows authorized officers to prepare official file notes containing observations, recommendations, and verification outcomes.

### 4. Director Approval Workflow

Routes verified reports and file notes to the Director for final review and approval through a structured workflow.

## Module-5. Correction & Return (Total Feature - 4)

**Features Description**

### 1. Send Back Option

Allows reviewers to return applications or reports to previous users for correction or additional information.

### 2. Desk-to-Desk Routing

Supports seamless routing of applications between different user desks according to the defined workflow.

### 3. Change Request Management

Enables reviewers to raise correction requests and monitor their completion throughout the workflow.

### 4. Previous Step Return Support

Allows applications to be returned to any previous workflow stage while maintaining complete processing history.

## Module-6. Re-Test Management (Total Feature - 3)

**Features Description**

### 1. Re-Test Request by Director

Allows the Director to request a re-test whenever additional verification or confirmation of results is required.

### 2. Re-Test Workflow

Supports a complete re-testing workflow from assignment to final result verification and approval.

### 3. Test Reassignment and Result Update

Allows laboratory tests to be reassigned to authorized personnel and updates the final test results accordingly.

## Module-7. Notification (Total Feature - 4)

**Features Description**

### 1. Email Notification

Automatically sends email notifications for workflow events, approvals, and application status updates.

### 2. SMS Notification

Delivers SMS alerts to users regarding important workflow activities and processing milestones.

### 3. In-App Notification

Displays real-time notifications within the system dashboard to keep users informed of pending actions.

### 4. Real-Time Status Update

Provides instant status updates whenever application or sample processing progresses to the next stage.

## Module-8. Remarks & Comment (Total Feature - 4)

**Features Description**

### 1. Remarks Entry

Allows users to record observations, comments, and recommendations at different workflow stages.

### 2. Verification Comments

Enables reviewers to document verification findings and additional clarification for future reference.

### 3. Review Notes

Allows reviewing officers to maintain structured notes throughout the evaluation and approval process.

### 4. Change Instructions

Provides clear correction instructions to responsible users whenever modifications are required.

## Module-9. Report Generation (Total Feature - 3)

**Features Description**

**1. Automated PDF Report Generation**

Automatically generates standardized PDF reports using approved templates and validated laboratory data.

**2. Report Download Facility**

Allows authorized users and applicants to securely download generated reports from the system.

**3. Digital Signature Support**

Supports digitally signed reports to ensure document authenticity, integrity, and legal validity.

## Module-10. Task Management (Total Feature - 3)

**Features Description**

**1. Role-based Inbox**

Provides each user with a personalized inbox displaying tasks based on assigned roles and responsibilities.

**2. Pending Task Management**

Allows users to monitor, prioritize, and complete pending workflow tasks efficiently.

**3. User-wise Work Queue**

Maintains separate work queues for each user to facilitate effective task distribution and workload management.

## Module-11. Dashboard (Total Feature - 3)

**Features Description**

**1. Role-wise Dashboard**

Displays customized dashboards with relevant information according to each user's assigned role.

**2. Work Monitoring**

Provides real-time monitoring of ongoing activities, pending tasks, and workflow performance.

**3. Status Summary and Reporting**

Presents summarized statistics and graphical reports to support operational monitoring and decision-making.

## Module-12. Audit & Activity Log (Total Feature - 4)

**Features Description**

**1. Full Audit Trail**

Maintains a complete audit trail of all system activities for transparency and regulatory compliance.

**2. Activity History**

Records chronological histories of user activities and workflow events for future reference.

### 3. User Action Tracking

Tracks every user action performed within the system to ensure accountability and traceability.

### 4. Data Change Log

Captures all modifications made to application and laboratory data, including timestamps and responsible users.

## Module-13. Workflow Engine (Total Feature - 3)

### Features Description

### 1. Dynamic Workflow Configuration

Allows administrators to configure and modify workflow processes without requiring system redevelopment.

### 2. Loop Support

Supports workflow loops such as correction, resubmission, re-inspection, and re-testing whenever required.

### 3. Future Workflow Flexibility

Provides a scalable workflow architecture capable of accommodating future business process changes.

## Module-14. Search (Total Feature - 4)

### Features Description

### 1. Advanced Search

Allows users to perform comprehensive searches using multiple search criteria simultaneously.

### 2. Filter Option

Provides advanced filtering capabilities to quickly locate applications, reports, or samples.

### 3. Sample Tracking Search

Enables users to search samples instantly using tracking IDs or other identifying information.

### 4. Report Search Facility

Allows users to retrieve laboratory reports efficiently using various search parameters.

## Module-15. Access Control (Total Feature - 3)

### Features Description

### 1. Role-Based Access Control (RBAC)

Restricts system access based on predefined user roles and assigned responsibilities.

### 2. User Permission Management

Allows administrators to manage user permissions and control access to specific system functions.

### 3. Security Control

Implements security measures to prevent unauthorized access and protect sensitive system resources.

## Module-16. Localization (Total Feature - 2)

**Features Description**

**1. Bangla and English Support**

Supports both Bangla and English languages to improve accessibility for different user groups.

**2. Bilingual Interface**

Provides a bilingual user interface with seamless language switching throughout the system.

## Module-17. Data Security (Total Feature - 3)

**Features Description**

**1. Data Encryption**

Encrypts sensitive data during storage and transmission to maintain information security.

**2. Secure Storage**

Stores system data securely using industry-standard security mechanisms and backup strategies.

**3. Confidential Data Protection**

Ensures confidential information is accessible only to authorized users through strict access controls.

## Module-18. Report Delivery (Total Feature - 3)

**Features Description**

**1. CM vs Govt/Private Delivery Logic**

Supports configurable report delivery processes based on applicant type, including CM, Government, and Private organizations.

**2. Applicant Notification**

Automatically informs applicants when laboratory reports are generated and ready for access.

**3. Report Access Control**

Restricts report access to authorized users while ensuring secure distribution of sensitive information.

## Module-19. Multiple Role Management (Total Feature - 3)

**Features Description**

**1. Multiple Role Assignment**

Allows a single user to hold multiple system roles based on organizational responsibilities.

**2. AD Acting as Examiner**

Enables Assistant Directors to perform Examiner responsibilities whenever operationally required.

**3. Flexible User Responsibility**

Supports dynamic assignment of responsibilities to ensure uninterrupted workflow and efficient resource utilization.

## Module-20. Regional Office Workflow (Total Feature - 3)

**Features Description**

### 1. Head Office Workflow

Supports centralized workflow management for applications and laboratory activities processed by the Head Office.

### 2. Regional Office Workflow

Enables Regional Offices to independently process assigned applications while following the centralized workflow.

### 3. Wing Head-Centric Processing

Allows Wing Heads to monitor, verify, and approve workflow activities within their respective wings while maintaining organizational governance.

| 04 | Workflow Management | 7 | 09 | Energy Meter Management | 10 |
| 05 | Parameter Management | 6 | 10 | Product & Laboratory Management | 6 |

## Service-15: Physical Testing

The proposed Physical Wing Testing Management System is a comprehensive digital platform designed to automate and streamline the complete laboratory testing process, from application submission and sample registration to test report generation and delivery. The system enables applicants to submit testing requests online, upload required documents, complete application payments, and track application status through a centralized portal. Each application is assigned a unique registration ID, while samples are securely received, encrypted, and managed throughout the testing lifecycle, including resample requests and sample collection scheduling for Energy Meter testing.

The solution supports a structured workflow where applications and test results progress through Director, DD, AD, and Examiner approval stages with forward, send-back, correction, retest, and backward workflow capabilities. Examiners perform laboratory testing, record test results, attach raw data, and submit findings for multi-level verification before generating standardized test reports. The system also manages product information, laboratory assignments, BDS standards, testing parameters, and standard limit validation to ensure accurate and compliant testing procedures.

Specialized Energy Meter testing features include shortfall management, sample collection workflows, retest management, meter-based certification, quantity-based pass/fail logic, and multiple certificate generation options. The platform further provides automated notifications, dynamic report generation, role-based access control, dashboards, and comprehensive tracking of applications, samples, and testing activities. Overall, the system delivers a secure, paperless, workflow-driven environment that enhances operational efficiency, traceability, transparency, and service quality for Physical Wing Testing services.

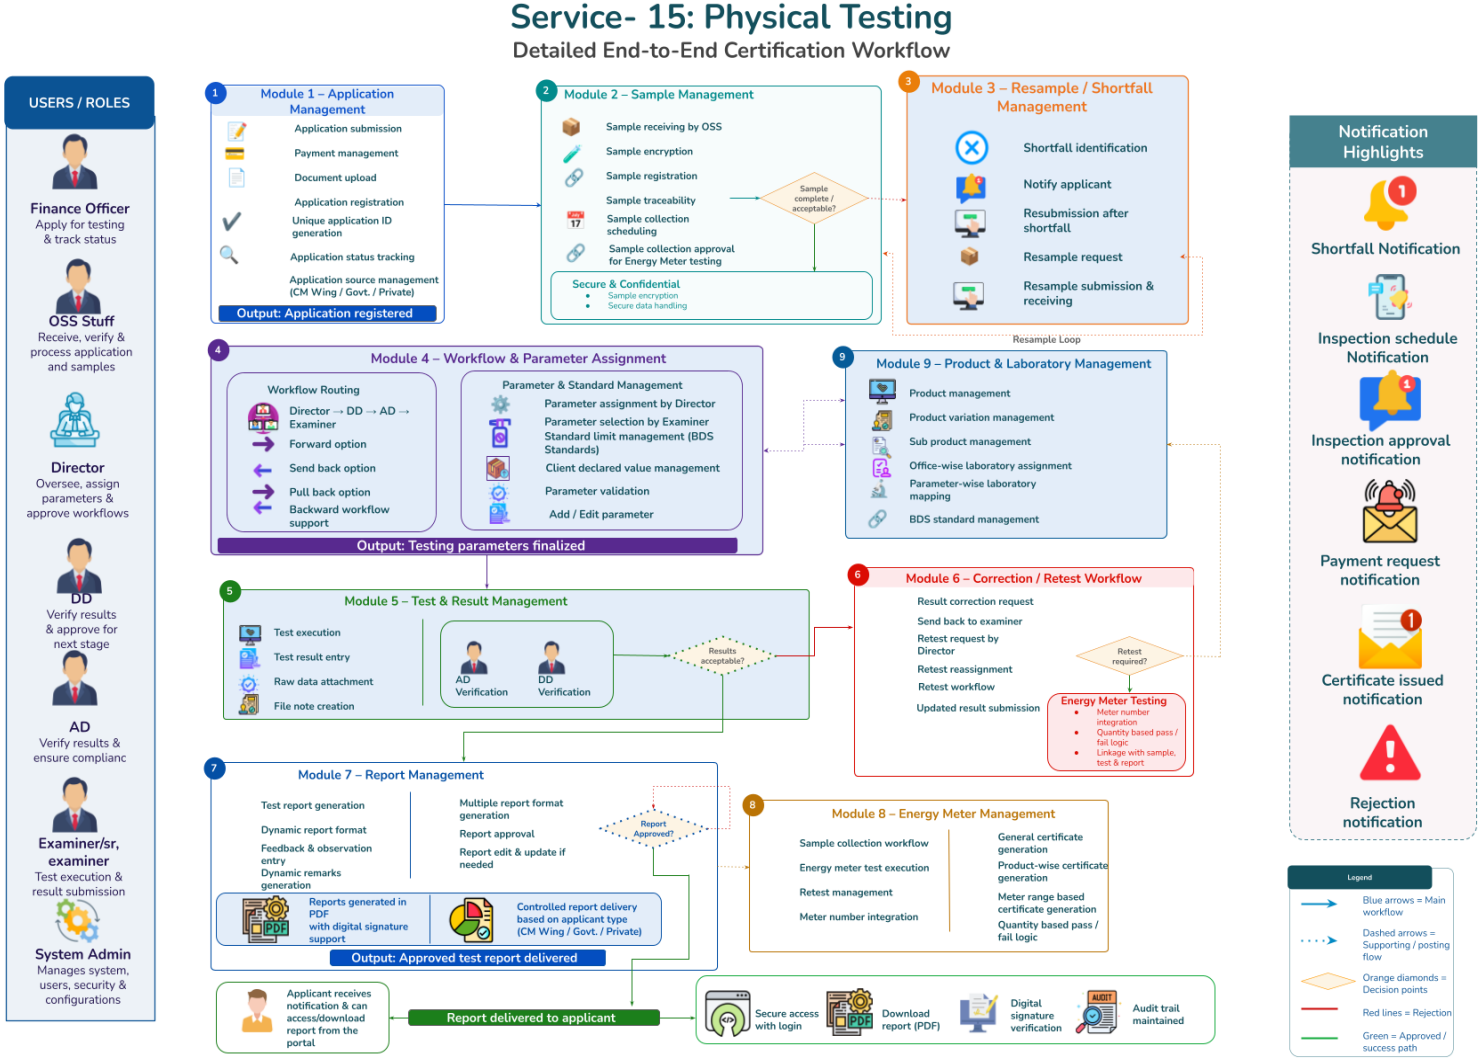

Figure Name: Physical Testing Workflow diagram

## Module-1. User & Role Management (Total Feature - 9)

**Features Description**

**1. Applicant Role**

Provides applicants with access to submit applications, upload documents, make payments, track application status, and download approved test reports.

**2. OSS Dashboard**

Provides the One Stop Service (OSS) dashboard displaying pending applications, sample receiving tasks, report delivery status, and workflow activities.

**3. OSS Role**

Allows OSS users to receive applications and samples, verify submitted documents, manage report delivery, and communicate with applicants.

**4. Director (Chemical/Physical) Role**

Enables the Director to assign testing parameters, monitor laboratory activities, review reports, and approve testing workflows.

**5. DD Role**

Allows the Deputy Director to verify test results, review reports, approve workflow stages, and monitor laboratory operations.

**6. AD Role**

Enables the Assistant Director to review examiner submissions, verify laboratory results, and forward reports for higher-level approval.

**7. Examiner/Senior Examiner Role**

Allows examiners to perform laboratory tests, enter test results, upload raw data, and submit findings for verification.

**8. System Admin Role**

Provides administrators with full control over user management, role assignment, system configuration, master data, and application settings.

**9. User Dashboard**

Displays personalized dashboards showing assigned tasks, pending approvals, notifications, and application progress based on user roles.

## Module-2. Application Management (Total Feature - 7)

**Features Description**

**1. Application Submission**

Allows applicants to submit laboratory testing applications online with the required information and supporting documents.

**2. Payment Management**

Supports online payment processing, payment verification, and payment status tracking for submitted applications.

### 3. Document Upload

Enables applicants to upload required documents and supporting files securely during the application process.

### 4. Application Registration

Registers submitted applications after successful verification and assigns them for further processing.

### 5. Unique Application ID Generation

Automatically generates a unique application identification number for tracking and reference purposes.

### 6. Application Status Tracking

Allows applicants and officials to monitor the real-time status of applications throughout the testing workflow.

### 7. Application Source Management (CM Wing/Govt./Private)

Records and categorizes applications based on their source, such as CM Wing, Government Organizations, or Private Organizations.

## Module-3. Sample Management (Total Feature - 6)

**Features Description**

### 1. Sample Receiving by OSS

Allows OSS officials to receive, verify, and register submitted samples for laboratory testing.

### 2. Sample Encryption

Assigns encrypted sample identification to maintain confidentiality and ensure unbiased laboratory testing.

### 3. Resample Request

Allows authorized officials to request additional or replacement samples when required.

### 4. Resample Submission & Receiving

Enables applicants to submit replacement samples and allows OSS to receive and register them.

### 5. Sample Collection Scheduling (Energy Meter)

Supports scheduling of field sample collection for Energy Meter testing and related inspection activities.

### 6. Sample Collection Approval

Allows authorized officials to review and approve sample collection schedules before execution.

## Module-4. Workflow Management (Total Feature - 7)

**Features Description**

### 1. Director → DD → AD → Examiner Workflow

Supports a configurable workflow routing applications through Director, DD, AD, and Examiner based on organizational processes.

### 2. Forward Option

Allows users to forward applications, reports, and tasks to the next responsible officer.

### 3. Send Back Option

Enables reviewers to return applications or reports for correction before approval.

### 4. Pull Back Option

Allows authorized users to retrieve previously forwarded applications before further processing.

### 5. Retest Workflow

Supports the complete workflow for retest requests, approvals, testing, and result generation.

### 6. Correction Workflow

Manages report correction requests and routes them through the appropriate approval process.

### 7. Backward Workflow Support

Allows applications to move back to previous workflow stages when additional review or correction is required.

## Module-5. Parameter Management (Total Feature - 6)

### Features Description

### 1. Parameter Assignment by Director

Allows the Director to assign laboratory testing parameters based on the submitted application.

### 2. Parameter Selection by Examiner

Enables examiners to select applicable testing parameters before conducting laboratory tests.

### 3. Standard Limit Management

Maintains standard testing limits according to approved BSTI standards and specifications.

### 4. Client Declared Value Management

Records and manages client-declared parameter values for comparison during testing.

### 5. Parameter Validation

Validates assigned parameters to ensure compliance with applicable testing standards.

### 6. Add/Edit Parameter

Allows authorized users to create, modify, and maintain laboratory testing parameters.

## Module-6. Test & Result Management (Total Feature - 7)

### Features Description

### 1. Test Execution

Allows examiners to conduct laboratory testing according to approved testing procedures and standards.

### 2. Test Result Entry

Enables authorized users to record laboratory test results in the system.

### 3. Raw Data Attachment

Allows examiners to upload raw laboratory data and supporting test documents.

### 4. AD Verification

Enables the Assistant Director to review and verify submitted laboratory test results.

### 5. DD Verification

Allows the Deputy Director to review and approve verified laboratory test results.

### 6. File Note Creation

Supports preparation and management of official file notes related to laboratory testing.

### 7. Result Correction Request

Allows authorized officials to request corrections to submitted laboratory results when necessary.

## Module-7. Report Management (Total Feature - 9)

**Features Description**

### 1. Test Report Generation

Automatically generates laboratory test reports based on approved test results.

### 2. Report Approval

Supports multi-level approval of laboratory test reports before final release.

### 3. Report Delivery by OSS

Allows OSS officials to deliver approved reports to applicants through the designated service channel.

### 4. Applicant Report Access

Enables applicants to securely view and download approved laboratory reports.

### 5. Report Edit & Update

Allows authorized users to revise reports before final approval where permitted.

### 6. Dynamic Report Format

Supports multiple report templates based on product type, laboratory, and testing requirements.

### 7. Feedback & Observation Entry

Allows laboratory officials to record observations, comments, and recommendations within the report.

### 8. Dynamic Remarks Generation

Automatically generates remarks based on testing outcomes and predefined business rules.

### 9. Multiple Report Format Generation

Supports generation of reports in different approved formats to meet organizational and regulatory requirements.

## Module-8. Notification Management (Total Feature - 5)

**Features Description**

**1. Approval Notification**

Automatically notifies applicants and officials when applications or reports are approved.

**2. Rejection Notification**

Sends notifications containing rejection reasons and required corrective actions.

**3. Sample Collection Notification**

Notifies applicants regarding scheduled sample collection dates and related instructions.

**4. Stage-wise Status Notification**

Provides automated notifications whenever an application progresses to the next workflow stage.

**5. Pending/Processing/Completed Status Tracking**

Allows users to monitor the current processing status of applications and laboratory activities.

## Module-9. Energy Meter Management (Total Feature - 10)

**Features Description**

**1. Shortfall Management**

Records and manages application or document shortfalls requiring applicant action.

**2. Resubmission After Shortfall**

Allows applicants to resubmit corrected documents or information after resolving identified shortfalls.

**3. Sample Collection Workflow**

Manages the complete workflow for Energy Meter sample collection, approval, and tracking.

**4. Energy Meter Test Execution**

Supports laboratory testing of energy meters according to approved BSTI testing procedures.

**5. Retest Management**

Allows authorized officials to initiate and manage retesting of Energy Meter samples when required.

**6. Meter Number Integration**

Records and manages unique meter numbers for identification and traceability during testing.

**7. General Certificate Generation**

Automatically generates certificates for approved Energy Meter testing results.

**8. Product-wise Certificate Generation**

Supports certificate generation based on specific product categories and testing outcomes.

**9. Meter Range Based Certificate Generation**

Generates certificates according to approved meter range classifications and testing standards.

### 10. Quantity Based Pass/Fail Logic

Automatically determines pass or fail status based on predefined quantity-based acceptance criteria.

## Module-10. Product & Laboratory Management (Total Feature - 6)

### Features Description

### 1. Product Management

Allows administrators to create, update, and manage products available for laboratory testing.

### 2. Product Variation Management

Supports management of different product variants and testing configurations.

### 3. Sub Product Management

Allows creation and maintenance of sub-products associated with parent product categories.

### 4. Office-wise Laboratory Assignment

Assigns laboratory facilities to specific offices based on operational requirements.

### 5. Parameter-wise Laboratory Mapping

Maps testing parameters to designated laboratories for efficient test allocation.

### 6. BDS Standard Management

Maintains Bangladesh Standards (BDS) specifications and associates them with applicable products and testing parameters.

## Service-16: Physical Lab- Energy Meter

The proposed Physical Lab- Energy Meter Testing Management System is a comprehensive digital platform designed to automate and streamline the complete Energy Meter testing process, from online application submission and payment to sample collection, laboratory testing, result verification, approval, retest, and final report delivery. The system enables applicants to submit testing applications with required documents and payments through a centralized portal, while providing role-based access to OSS, Director (Physical), DD, AD/Senior Examiner, and Examiner users. Each application is routed through a structured workflow where the Director can forward or assign applications to the appropriate testing personnel for further processing.

The solution supports shortfall management, customer resubmission, sample collection scheduling and approval, laboratory test execution, result entry, raw data attachment, multi-level verification, file note creation, and final approval. Examiners can identify application shortfalls, communicate required corrections to customers, schedule or reschedule sample collection, collect samples, perform testing, and submit results for verification. AD verifies the test results, DD verifies the results and prepares the file note, and the Director provides final approval. The system also supports send-back and pull-back options up to the Director level, along with retest processing when required.

After final approval, OSS users can access the approved test report and deliver it to the customer through the designated service channel. If the test result is not approved, the system automatically notifies the customer regarding the outcome. Overall, the system provides a secure, paperless, workflow-driven environment that improves transparency, traceability, testing efficiency, and service delivery for Energy Meter testing.

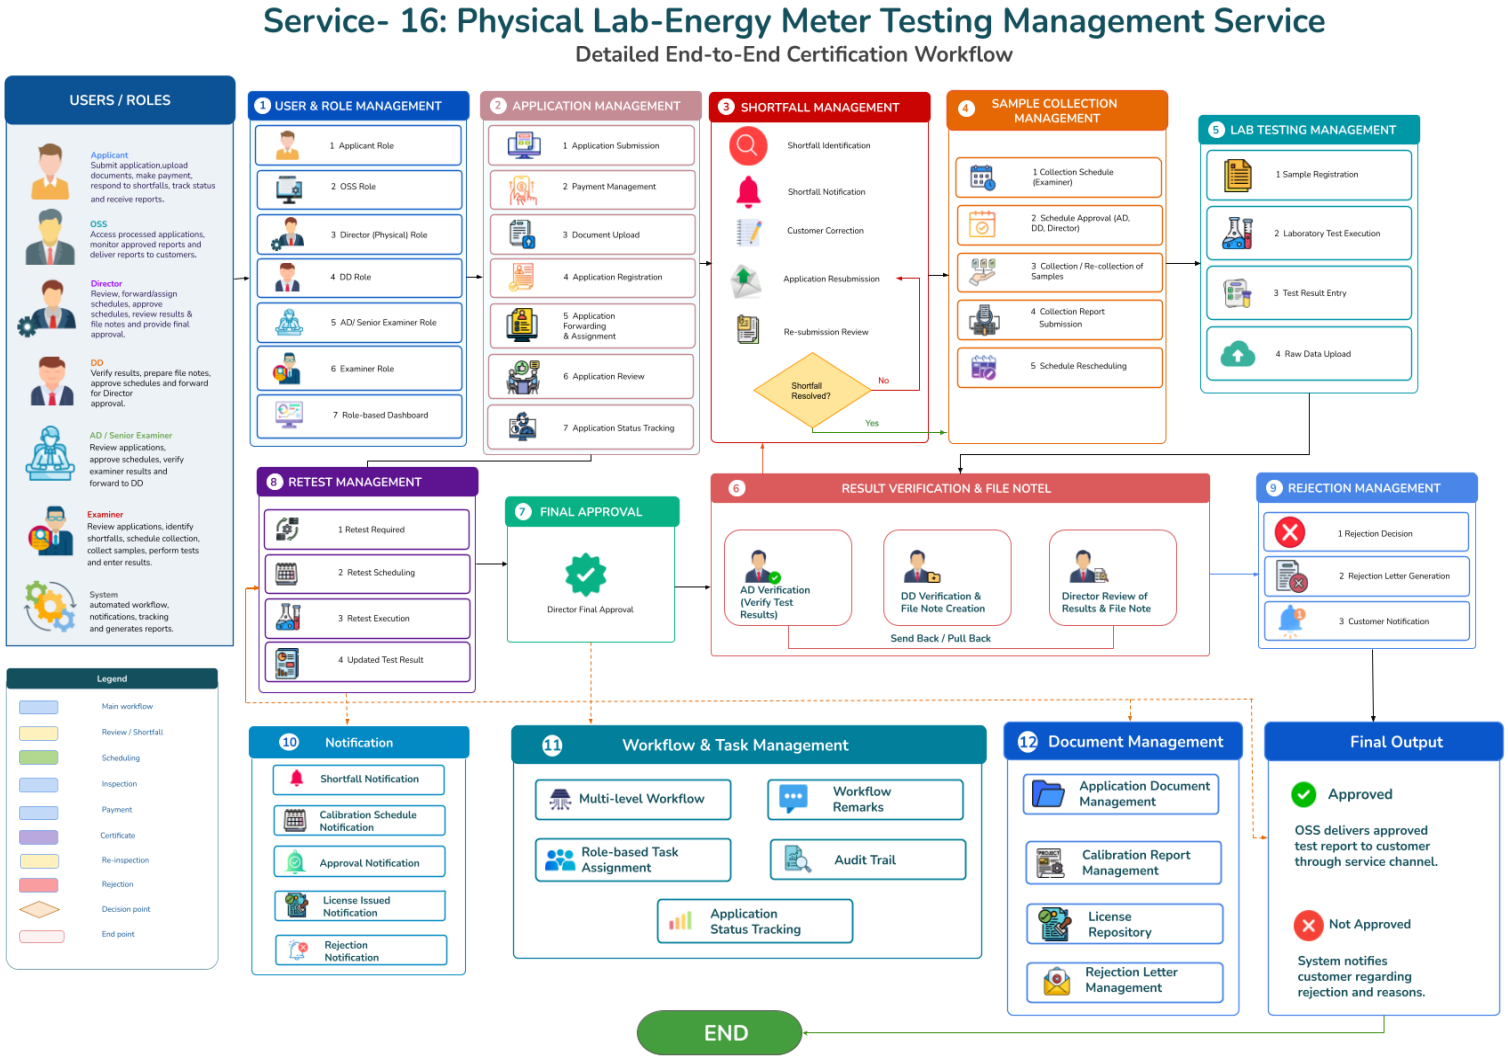

Figure: Physical Lab- Energy Meter Workflow diagram

## Module-1. User & Role Management (Total Feature - 7)

**Features Description**

1. **Applicant Role**
   Provides applicants with access to submit Energy Meter testing applications, upload required documents, make payments, respond to shortfalls, track application status, and receive approved test reports.
2. **OSS Role**
   Allows OSS users to access processed applications, monitor approved test reports, manage report delivery, and deliver final test reports to customers.
3. **Director (Physical) Role**
   Enables the Director to review applications, forward or assign applications to DD/AD/Examiner, approve sample collection schedules, review test results and file notes, and provide final approval.
4. **DD Role**
   Allows the Deputy Director to verify test results, prepare and manage file notes, approve sample collection schedules, and forward verified results for Director approval.
5. **AD/Senior Examiner Role**
   Enables AD/Senior Examiner users to review applications, approve sample collection schedules, verify examiner test results, and forward results to DD for further processing.
6. **Examiner Role**
   Allows examiners to review assigned applications, identify shortfalls, schedule sample collection, collect samples, perform Energy Meter tests, enter test results, and upload raw data.
7. **Role-based Dashboard**
   Provides personalized dashboards displaying assigned applications, pending actions, approval tasks, sample collection schedules, testing activities, notifications, and workflow status according to user roles.

## Module-2. Application Management (Total Feature - 7)

**Features Description**

1. **Application Submission**
   Allows applicants to submit Energy Meter testing applications online with the required application information and supporting documents.
2. **Payment Management**
   Supports online payment submission, payment verification, and tracking of application payment status.

3. **Document Upload**
   Enables applicants to securely upload required documents and supporting files during the application process.
4. **Application Registration**
   Registers submitted applications and makes them available for further review and workflow processing after successful submission and payment.
5. **Application Forwarding & Assignment**
   Allows the Director (Physical) to forward or assign applications to DD, AD/Senior Examiner, or Examiner based on testing requirements.
6. **Application Review**
   Allows assigned examiners and authorized officials to review application information and submitted documents before proceeding with testing activities.
7. **Application Status Tracking**
   Allows applicants and authorized officials to monitor the current status and processing stage of applications throughout the Energy Meter testing lifecycle.

## Module-3. Shortfall Management (Total Feature - 5)

**Features Description**

1. **Shortfall Identification**
   Allows the Examiner to identify missing, incorrect, or insufficient information and documents during application review.
2. **Shortfall Notification**
   Automatically communicates identified shortfalls to the customer along with the required corrective actions.
3. **Customer Shortfall Rectification**
   Allows customers to correct identified deficiencies and provide the required information or documents.
4. **Shortfall Resubmission**
   Enables customers to resubmit corrected documents or information after resolving the identified shortfall.
5. **Shortfall Verification**
   Allows the Examiner to review and verify the customer's resubmitted information before continuing the application workflow.

## Module-4. Sample Collection Management (Total Feature - 7)

**Features Description**

1. **Sample Collection Scheduling**
   Allows the Examiner to set a suitable sample collection date based on testing requirements and operational availability.

2. **Sample Collection Rescheduling**
   Enables the Examiner to modify or reschedule the sample collection date when required.
3. **Sample Collection Approval**
   Allows AD/Senior Examiner, DD, and Director to review and approve the proposed sample collection date.
4. **Customer Collection Notification**
   Automatically notifies the customer about the approved sample collection date and related instructions.
5. **Sample Collection Tracking**
   Maintains the schedule and status of Energy Meter sample collection activities throughout the testing process.
6. **Sample Receiving & Registration**
   Allows authorized users to record received Energy Meter samples and associate them with the relevant application.
7. **Sample Identification & Traceability**
   Maintains unique sample identification and links samples with applications, testing activities, results, and reports for complete traceability.

## Module-5. Energy Meter Testing Management (Total Feature - 6)

**Features Description**

1. **Test Assignment**
   Provides assigned examiners with access to Energy Meter applications and samples for conducting the required laboratory tests.
2. **Test Execution**
   Allows examiners to perform Energy Meter testing according to applicable testing procedures and approved requirements.
3. **Test Result Entry**
   Enables examiners to record Energy Meter test results and relevant testing observations in the system.
4. **Raw Data Attachment**
   Allows examiners to upload raw laboratory data, test records, and supporting documents associated with the performed tests.
5. **Test Result Submission**
   Enables examiners to submit completed test results and supporting raw data for AD verification.
6. **Test Activity Tracking**
   Maintains records of testing activities, assigned examiners, test dates, results, and workflow progression for audit and traceability purposes.

## Module-6. Result Verification & Approval (Total Feature - 7)

**Features Description**

1. **AD Result Verification**
   Allows the AD/Senior Examiner to review and verify test results and attached raw data submitted by the Examiner.
2. **DD Result Verification**
   Enables the Deputy Director to review and verify the results after completion of AD-level verification.
3. **File Note Creation**
   Allows the DD to create and manage official file notes associated with the Energy Meter test results and approval process.
4. **Director Result Approval**
   Enables the Director (Physical) to review and provide final approval for the test result and associated file note.
5. **Result Rejection**
   Allows authorized officials to reject test results when they do not meet the required criteria or approval conditions.
6. **Customer Result Notification**
   Automatically notifies the customer when the test result is not approved, including the applicable outcome or next action.
7. **Result Approval Tracking**
   Maintains complete records of verification, approval, rejection, dates, remarks, and responsible officials throughout the result approval process.

## Module-7. Workflow Management (Total Feature - 6)

**Features Description**

1. **Role base Workflow**
   Supports structured routing of Energy Meter applications and test results through Director, DD, AD/Senior Examiner, and Examiner based on the defined organizational workflow.
2. **Forward Option**
   Allows authorized users to forward applications, sample collection requests, test results, and file notes to the next responsible user or approval stage.
3. **Send Back Option**
   Enables authorized users to send applications, sample collection requests, results, or file notes back to the previous stage for correction or additional review.
4. **Pull Back Option**
   Allows authorized users to retrieve previously forwarded applications or workflow items before further processing, where permitted.

5. **Approval Workflow**
   Manages the complete approval sequence from application assignment and sample collection approval through test result verification and final Director approval.
6. **Workflow History**
   Maintains a complete chronological history of forwarding, sending back, pulling back, verification, approval, rejection, and other workflow actions.

## Module-8. Retest Management (Total Feature - 5)

**Features Description**

1. **Retest Request**
   Allows authorized officials to initiate a retest when the Energy Meter test result requires additional testing or verification.
2. **Retest Approval**
   Supports review and approval of retest requests by authorized officials according to the defined workflow.
3. **Retest Sample Management**
   Allows the system to associate the required sample and testing information with the retest process.
4. **Retest Execution & Result Entry**
   Enables examiners to perform the required retest and record the new test results and supporting raw data.
5. **Retest Result Verification**
   Routes retest results through the defined AD, DD, and Director verification and approval workflow before final report generation.

## Module-9. Test Report Management (Total Feature - 6)

**Features Description**

1. **Test Report Generation**
   Generates the Energy Meter test report based on the approved laboratory test results.
2. **Report Approval**
   Ensures that test reports are generated and released only after completion of the required result approval process.
3. **OSS Report Access**
   Provides OSS users with access to approved test reports for customer delivery.
4. **Report Delivery to Customer**
   Allows OSS officials to deliver approved test reports to the respective customer through the designated service channel.

5. **Applicant Report Access**
   Enables customers to receive and access their approved Energy Meter test reports through the applicable service channel.
6. **Report Status Tracking**
   Maintains the status of test reports from generation and approval through OSS access and final delivery to the customer.

## Module-10. Notification Management (Total Feature - 5)

**Features Description**

1. **Application Status Notification**
   Provides applicants with notifications regarding important changes in their application processing status.
2. **Shortfall Notification**
   Notifies customers when additional information, documents, or corrections are required to proceed with the application.
3. **Sample Collection Notification**
   Automatically notifies customers regarding approved or rescheduled sample collection dates.
4. **Result Approval/Rejection Notification**
   Notifies customers when the test result has been approved or not approved by the competent authority.
5. **Report Delivery Notification**
   Notifies customers when the approved Energy Meter test report is available for delivery or access through the designated service channel.

## Module-11. Energy Meter Information Management (Total Feature - 5)

**Features Description**

1. **Energy Meter Information**
   Records and maintains essential Energy Meter information associated with each testing application and sample.
2. **Meter Identification Management**
   Maintains unique meter identification information to ensure proper association between the meter, sample, application, test, and report.
3. **Product/Model Information**
   Records Energy Meter product and model information required for testing and reporting purposes.
4. **Test Parameter Management**
   Maintains applicable testing parameters and requirements for Energy Meter laboratory testing.

5. **Testing Record Management**
   Maintains complete historical records of Energy Meter applications, samples, testing results, approvals, retests, and reports.

## Module-12. Tracking & Audit Management (Total Feature - 5)

**Features Description**

1. **Application Tracking**
   Provides end-to-end tracking of applications from submission, payment, review, testing, approval, and report delivery.
2. **Sample Tracking**
3. 
   Tracks sample scheduling, collection, receiving, testing, retesting, and final status.
4. **Test Result Tracking**
   Maintains the complete lifecycle of test results from examiner entry through AD, DD, and Director verification and approval.
5. **User Activity Tracking**
   Records important activities performed by applicants, OSS, Director, DD, AD/Senior Examiner, and Examiner users.
6. **Workflow Audit Trail**
   Maintains a detailed audit trail of workflow actions, including forwarding, sending back, pulling back, approvals, rejections, corrections, and retest activities.

## Service-17: MSC Certification

The proposed MSC Certification Management System is a comprehensive digital platform designed to automate and manage the complete MSC certification lifecycle, from online application submission to certificate issuance and verification. The system enables applicants to register, submit certification applications, upload required documents, and complete online payments while providing real-time application tracking and automated workflow routing. Applications undergo a structured review and adequacy audit process, allowing BSTI officials to verify submissions, identify deficiencies, request corrections, and manage resubmission cycles with automated notifications.

Following successful application review, the system manages agreement preparation, man-day calculation, audit scheduling, and Stage-1 and Stage-2 audit processes. Audit teams prepare audit plans, conduct on-site assessments, record findings, and generate audit reports, while applicants submit corrective actions and supporting evidence through an integrated corrective action management workflow. Multi-level verification and approval processes ensure compliance before certification proposals are reviewed by the Certification Committee. The system also supports committee meeting management, meeting minutes, billing, online payment verification, and certificate generation with digital approval. Generated certificates include QR-code-based public verification to ensure authenticity and transparency.

The solution incorporates role-based access control, workflow automation, audit trails, dashboards, reporting, and integration with payment gateways, digital signatures, SMS, email, and existing BSTI eService modules. Overall, the system provides a centralized, paperless, secure, and workflow-driven environment that enhances operational efficiency, transparency, compliance, and service delivery for MSC Certification services.

# Service- 17: MSC Certification Management System

## Detailed End-to-End Certification Workflow

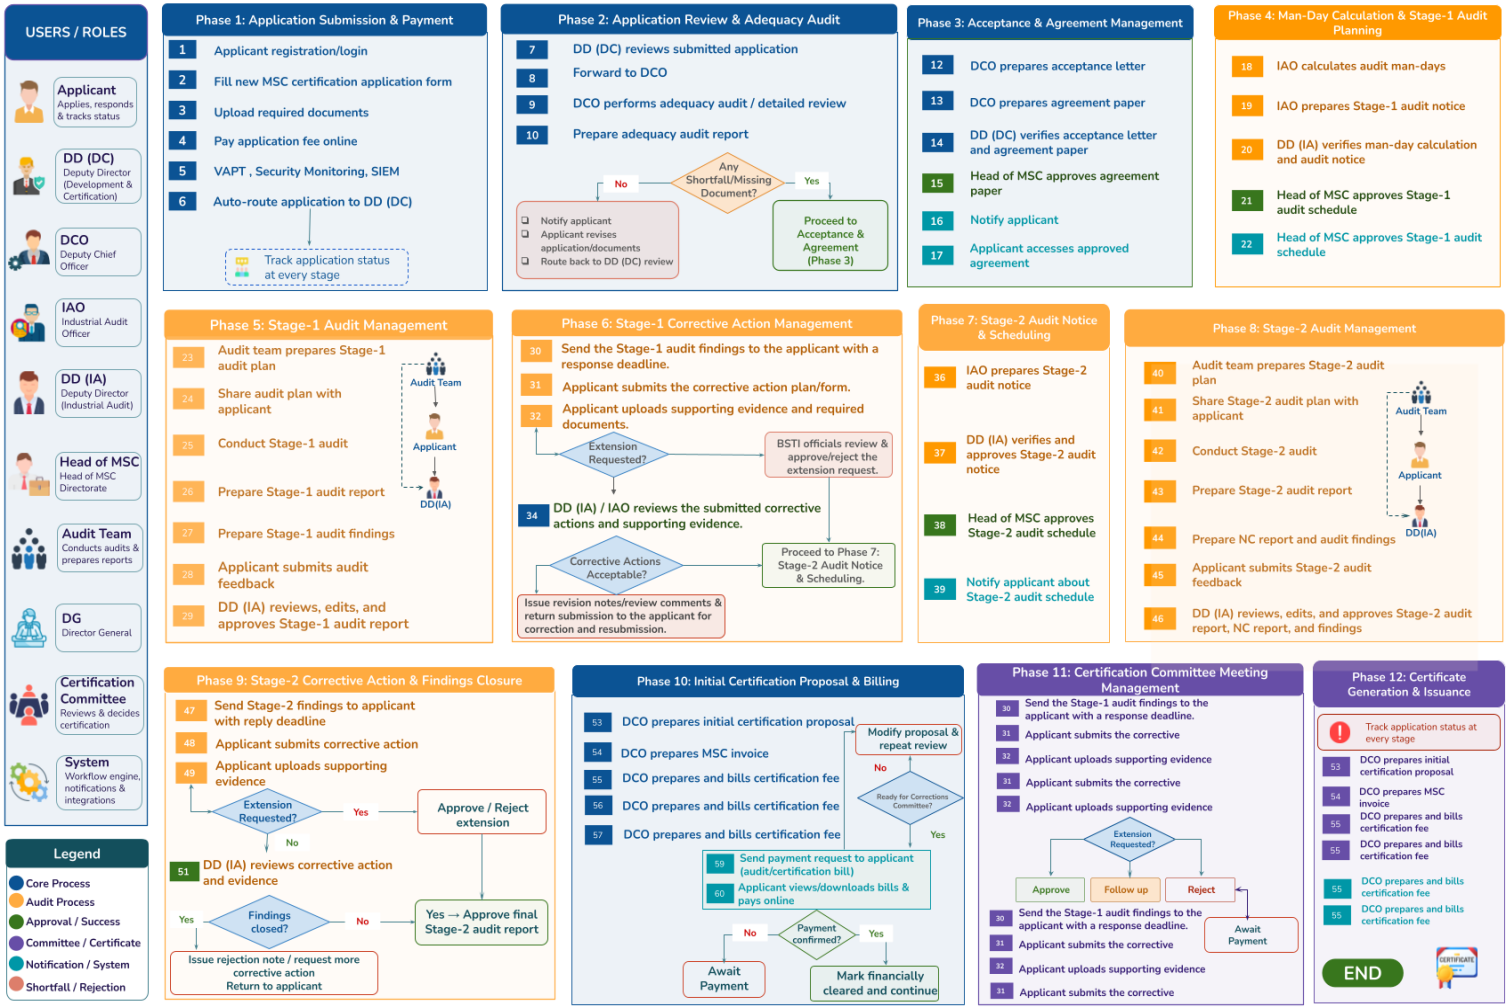

Figure Name: MSC Certification Management

## Module-1: MSC Application Management (Total Feature - 6)

**Features Description**

**1 Applicant Registration and Login**

Enables applicants to securely register and log in to the MSC Certification Portal using authenticated credentials. The system ensures secure user access and personalized application management.

**2 Online MSC Certification Application Form Submission**

Allows applicants to complete and submit the MSC certification application electronically through a structured online form. The system validates mandatory information before submission.

**3 Application Tracking Number Generation**

Automatically generates a unique application tracking number upon successful submission. This reference number enables applicants and BSTI officials to track the application throughout the certification process.

**4 Draft, Submit and Resubmit Application Facility**

Allows applicants to save applications as drafts before final submission. Applicants can also update and resubmit applications when additional information or corrections are requested during the review process.

**5 Application Status Tracking**

Provides real-time visibility into the current status of the application, including submitted, under review, pending correction, approved, or rejected. This helps applicants monitor progress without manual follow-up.

**6 Automatic Routing of Submitted Application to DD (DC)**

Automatically forwards submitted applications to the designated Deputy Director (DD-DC) based on the predefined workflow. This ensures timely review and eliminates manual assignment delays.

## Module-2: Application Payment and Document Management Module (Total Feature - 6)

**Features Description**

**1. Upload Required Application Documents**

Allows applicants to upload all mandatory supporting documents required for MSC certification. The system ensures documents are securely stored and linked to the corresponding application.

**2. Document Validation and Verification Support**

Provides tools for BSTI officials to verify the completeness, authenticity, and compliance of submitted documents. This helps ensure that only valid applications proceed to the next stage.

### 3. Online Application Fee Payment

Enables applicants to pay the required application fees through integrated online payment gateways. The system securely processes transactions and records payment information.

### 4. Payment Confirmation and Payment History

Automatically confirms successful payments and maintains a complete history of all payment transactions. Applicants and authorized officials can review payment records whenever required.

### 5. Missing-Document Upload and Resubmission Facility

Allows applicants to upload missing or revised documents after receiving review comments. The system supports resubmission without requiring a new application.

### 6. Secure Document Upload/Download Management

Provides secure document storage with controlled upload and download access based on user roles. All document activities are protected to maintain confidentiality and data integrity.

## Module-3: Application Review and Adequacy Audit Module (Total Feature - 8)

### Features Description

### 1. DD (DC) Receives and Reviews Submitted Applications

Enables the DD (DC) to receive newly submitted applications and perform an initial review for completeness and compliance with certification requirements.

### 2. Forward Application to DCO

Allows the DD (DC) to forward reviewed applications to the Designated Certification Officer (DCO) for adequacy assessment through the system workflow.

### 3. DCO Performs Adequacy Audit/Review

Enables the DCO to conduct a detailed adequacy review of the submitted application and supporting documents to ensure compliance with MSC certification requirements.

### 4. Prepare Adequacy Audit Report

Allows the DCO to prepare a structured adequacy audit report documenting the review findings, observations, and recommendations.

### 5. Add Review Remarks and Shortage Observations

Provides the ability to record review comments, document deficiencies, and any identified non-compliance requiring applicant action.

### 6. Notify Applicant Regarding Document Shortfall

Automatically notifies the applicant of missing documents, deficiencies, or required corrections identified during the adequacy review process.

### 7. Applicant Rectifies and Resubmits Documents

Allows applicants to address review observations by uploading corrected or additional documents and resubmitting the application for further review.

### 8. Approve or Reject Adequacy Audit Result

Enables authorized officials to approve applications that meet adequacy requirements or reject applications that fail to satisfy the necessary criteria.

## Module-4: Acceptance and Agreement Management Module (Total Feature - 8)

**Features Description**

### 1. Prepare Acceptance Letter

Allows the system to generate an acceptance letter for applications that successfully pass the adequacy review process, confirming their progression to the next stage.

### 2. Prepare Agreement Paper

Enables the preparation of the official agreement document outlining the terms, conditions, and responsibilities related to the MSC certification process.

### 3. DCO Drafts Acceptance Letter and Agreement Paper

Allows the DCO to prepare and manage draft versions of the acceptance letter and agreement paper before initiating the approval workflow.

### 4. DD (DC) Verifies and Approves Acceptance Letter

Enables the DD (DC) to review the acceptance letter for accuracy and compliance before providing formal approval.

### 5. DD (DC) Verifies Agreement Paper

Allows the DD (DC) to examine the agreement paper to ensure all information, terms, and conditions are complete and accurate prior to higher-level approval.

### 6. Director/Head of MSC Approves Agreement Paper

Enables the Director/Head of MSC to provide final approval of the agreement paper, authorizing the applicant to proceed with the certification process.

### 7. Notify Applicant After Approval

Automatically sends notifications to applicants once the acceptance letter and agreement paper have been approved, informing them of the next steps.

### 8. Applicant Can Access Approved Agreement Paper

Allows applicants to securely view and download the approved agreement paper from the system for reference and record-keeping.

## Module-5: Man-Day Calculation and Audit Scheduling Module (Total Feature - 7)

**Features Description**

### 1. IAO Performs Man-Day Calculation

Enables the Inspection and Audit Officer (IAO) to calculate the required audit man-days based on the organization's scope, size, complexity, and applicable certification standards.

### 2. Set, Reschedule or Revise Audit Dates

Allows authorized officials to schedule, modify, or reschedule audit dates based on operational requirements, applicant requests, or unforeseen circumstances.

### 3. Prepare Stage-1 Audit Notice

Enables the IAO to prepare and issue the official Stage-1 audit notice containing the audit schedule, scope, and relevant instructions for the applicant.

### 4. DD (IA) Verifies Man-Day Calculation and Audit Notice

Allows the Deputy Director (IA) to review and verify the calculated audit man-days and the Stage-1 audit notice before approval.

### 5. Director/Head of MSC Approves Stage-1 Audit Schedule

Enables the Director/Head of MSC to review and provide final approval for the proposed Stage-1 audit schedule.

### 6. Notify Applicant About Approved Stage-1 Audit Date

Automatically notifies the applicant once the Stage-1 audit schedule is approved, providing the confirmed audit date and related information.

### 7. Maintain Audit Schedule Calendar and History

Maintains a centralized audit calendar along with a complete history of scheduled, revised, and completed audit activities for future reference and reporting.

## Module-6: Stage-1 Audit Management Module (Total Feature - 8)

**Features Description**

### 1. Audit Team Prepares Stage-1 Audit Plan

Allows the Audit Team to prepare a comprehensive Stage-1 audit plan outlining the audit scope, objectives, schedule, and assigned auditors.

### 2. Share Audit Plan with Applicant

Enables the approved Stage-1 audit plan to be shared electronically with the applicant before the scheduled audit.

### 3. Applicant Receives Stage-1 Audit Plan Notification

Automatically notifies the applicant when the Stage-1 audit plan is published, ensuring timely communication of audit details.

### 4. Audit Team Conducts Stage-1 Audit

Allows the Audit Team to perform the Stage-1 audit according to the approved audit plan and applicable MSC certification requirements.

### 5. Prepare Stage-1 Audit Report

Enables the Audit Team to prepare a detailed audit report summarizing the audit activities, observations, and overall assessment.

### 6. Prepare Stage-1 Audit Findings Report

Allows auditors to document all audit findings, including observations, non-conformities, and areas requiring corrective action.

### 7. Applicant Submits Audit Feedback Form

Enables applicants to provide feedback regarding the audit process, auditor performance, and overall audit experience through the system.

### 8. DD (IA) Reviews, Edits and Approves Audit Report

Allows the Deputy Director (IA) to review, revise where necessary, and approve the finalized Stage-1 audit report before proceeding to the corrective action stage.

## Module-7: Corrective Action Management Module (Total Feature - 9)

### Features Description

### 1. Identify Findings/Non-Conformities from Stage-1 Audit

Enables the system to record and categorize audit findings and non-conformities identified during the Stage-1 audit for corrective action.

### 2. Send Findings to Applicant with Corrective-Action Reply Date

Automatically communicates audit findings to the applicant along with the deadline for submitting corrective actions and supporting evidence.

### 3. Applicant Submits Corrective Action Form

Allows applicants to submit corrective action plans describing how each identified non-conformity will be resolved.

### 4. Applicant Uploads Corrective-Action Evidence/Supporting Documents

Enables applicants to upload supporting documents and evidence demonstrating the implementation of proposed corrective actions.

### 5. Applicant Requests Extension of Reply Date

Allows applicants to request an extension of the corrective action submission deadline by providing appropriate justification.

### 6. BSTI Officials Approve or Reject Extension Request

Enables authorized BSTI officials to review extension requests and approve or reject them based on the provided justification.

### 7. DD (IA)/IAO Reviews Corrective Action

Allows the DD (IA) or IAO to evaluate submitted corrective actions and supporting evidence to determine whether the identified non-conformities have been adequately addressed.

### 8. Send Rejection Note if Corrective Action is Not Acceptable

Enables the system to issue a rejection notice with review comments when the submitted corrective action does not satisfy the required standards.

### 9. Maintain Corrective-Action Status and History

Maintains a complete record of corrective action submissions, reviews, approvals, rejections, and status updates to ensure full traceability throughout the certification process.

## Module-8: Stage-2 Audit Notice and Scheduling Module (Total Feature - 8)

**Features Description**

**1. IAO Prepares Stage-2 Audit Notice**

Enables the Inspection and Audit Officer (IAO) to prepare the official Stage-2 audit notice containing the audit schedule, scope, and relevant instructions for the applicant.

**2. Set or Reschedule Stage-2 Audit Date**

Allows authorized officials to schedule or revise the Stage-2 audit date based on operational requirements, applicant requests, or other valid circumstances.

**3. DD (IA) Verifies and Approves Stage-2 Audit Notice**

Enables the Deputy Director (IA) to review the Stage-2 audit notice for accuracy and approve it before forwarding it for final authorization.

**4. Director/Head of MSC Reviews and Approves Stage-2 Audit Date**

Allows the Director/Head of MSC to review and provide final approval of the proposed Stage-2 audit schedule before notifying the applicant.

**5. Notify Applicant About Stage-2 Audit Schedule**

Automatically sends notifications to the applicant with the approved Stage-2 audit date, schedule, and related audit information.

**6. Maintain Stage-2 Schedule and Rescheduling History**

Maintains a complete history of Stage-2 audit schedules, revisions, and rescheduling activities to ensure transparency and audit traceability.

## Module-9: Stage-2 Audit Management Module (Total Feature - 8)

**Features Description**

**1. Audit Team Prepares Stage-2 Audit Plan**

Enables the Audit Team to prepare a detailed Stage-2 audit plan outlining the audit scope, objectives, schedule, and assigned audit members.

**2. Share Stage-2 Audit Plan with Applicant**

Allows the approved Stage-2 audit plan to be shared electronically with the applicant prior to the scheduled audit.

**3. Audit Team Performs Stage-2 Audit**

Enables the Audit Team to conduct the Stage-2 audit in accordance with the approved audit plan and MSC certification requirements.

**4. Prepare Stage-2 Audit Report**

Allows auditors to prepare a comprehensive report summarizing the audit activities, observations, conclusions, and overall assessment.

**5. Prepare NC Report and Audit Findings Report**

Enables the Audit Team to document identified non-conformities (NCs), audit findings, and recommendations in structured reports.

### 6. Applicant Submits Stage-2 Audit Feedback

Allows applicants to provide feedback on the Stage-2 audit process, audit team performance, and overall experience through the system.

### 7. DD (IA) Reviews, Edits and Approves Stage-2 Audit Report, NC Report and Findings

Enables the Deputy Director (IA) to review, revise where necessary, and approve the finalized Stage-2 audit report, NC report, and audit findings before proceeding to finding closure.

## Module-10: Stage-2 Corrective Action and Findings Closure Module (Total Feature - 8)

**Features Description**

### 1. Send Stage-2 Findings to Applicant with Reply Deadline

Automatically communicates Stage-2 audit findings to the applicant along with the deadline for submitting corrective actions and supporting evidence.

### 2. Applicant Submits Corrective Action Against Stage-2 Findings

Allows applicants to submit corrective action plans addressing each Stage-2 audit finding and identified non-conformity.

### 3. Applicant Uploads Supporting Evidence

Enables applicants to upload documents and other supporting evidence demonstrating the implementation of corrective actions.

### 4. Applicant Requests Deadline Extension if Required

Allows applicants to request an extension of the corrective action submission deadline by providing valid reasons for the request.

### 5. DD (IA) Reviews Corrective Action and Evidence

Enables the Deputy Director (IA) to evaluate submitted corrective actions and supporting evidence to determine whether the audit findings have been adequately addressed.

### 6. Approve Findings Closure if Acceptable

Allows authorized officials to approve the closure of audit findings after verifying that all corrective actions have been satisfactorily implemented.

### 7. Issue Rejection Note if Corrective Action is Unacceptable

Enables the system to generate a rejection note with review comments when the submitted corrective action or evidence does not meet certification requirements.

### 8. Approve Final Stage-2 Audit Report When All Findings Are Closed

Allows the final Stage-2 audit report to be approved after all non-conformities have been resolved and the corresponding findings have been formally closed.

## Module-11: Initial Certification Proposal Management Module (Total Feature - 6)

**Features Description**

**1. DCO Prepares Initial Certification Proposal**

Enables the Designated Certification Officer (DCO) to prepare the initial certification proposal based on the completed audit results, findings, and compliance status.

**2. DCO Prepares MSC Intimation**

Allows the DCO to prepare the official MSC intimation document containing relevant certification information and recommendations.

**3. DD (DC) Verifies, Edits and Approves Proposal**

Enables the Deputy Director (DD-DC) to review, modify if necessary, and approve the certification proposal before forwarding it for higher-level review.

**4. Director/Head of MSC Reviews Proposal**

Allows the Director/Head of MSC to review the certification proposal and ensure it complies with applicable certification policies and requirements.

**5. Determine Whether Proposal is Ready for Certification Committee**

Enables authorized officials to assess the proposal's completeness and determine whether it is ready to be presented to the Certification Committee for final evaluation.

**6. Maintain Proposal Approval/Rejection History**

Maintains a complete record of proposal reviews, approvals, rejections, and related comments to ensure transparency and audit traceability.

## Module-12: Audit and Certification Billing Module (Total Feature - 9)

**Features Description**

**1. Generate Audit Bill/Invoice**

Enables the system to generate audit invoices based on the approved audit activities and applicable fee structure.

**2. Generate Certification Bill/Invoice**

Allows the system to generate certification invoices after successful completion of the certification process and applicable approvals.

**3. DCO Prepares Audit and Certification Bills**

Enables the DCO to prepare audit and certification bills for review before they are issued to the applicant.

**4. DD (DC) Verifies and Approves Bills**

Allows the Deputy Director (DD-DC) to review the generated invoices for accuracy and approve them before issuance.

**5. Send Payment Request to Applicant**

Automatically sends payment requests to applicants along with invoice details, payment instructions, and applicable deadlines.

### 6. Applicant Receives Audit Bill and Certification Bill

Allows applicants to securely access, view, and download audit and certification invoices through the system.

### 7. Online Payment Facility

Enables applicants to make audit and certification payments electronically through integrated and secure online payment gateways.

### 8. Payment Confirmation Before Certificate Generation

Verifies successful payment before allowing the certificate generation process to proceed, ensuring all financial obligations have been fulfilled.

### 9. Payment Report and Payment History

Maintains comprehensive payment records, transaction history, and financial reports for monitoring, reconciliation, and auditing purposes.

## Module-13: Certification Committee Meeting Management Module (Total Feature - 8)

**Features Description**

### 1. DD (DC) Prepares Certification Committee Meeting Notice

Enables the Deputy Director (DD-DC) to prepare the official meeting notice for the Certification Committee with the meeting schedule and agenda.

### 2. Director/Head of MSC Verifies Meeting Notice

Allows the Director/Head of MSC to review and verify the meeting notice before forwarding it for final approval.

### 3. DG Approves Meeting Notice

Enables the Director General (DG) to provide final approval for the Certification Committee meeting notice before distribution.

### 4. Send Meeting Notice to Certification Committee

Automatically distributes the approved meeting notice to all Certification Committee members through the system.

### 5. Generate Certification Committee Meeting Notice PDF

Allows the system to generate the approved meeting notice in PDF format for official communication and record-keeping.

### 6. Certification Committee Reviews Certification Proposal

Enables the Certification Committee to evaluate the submitted certification proposal, supporting documents, and audit outcomes before making a decision.

### 7. Record Approval, Rejection or Follow-Up Audit Decision

Allows the committee to record its final decision, including approval, rejection, or the requirement for a follow-up audit, within the system.

### 8. DD (DC) Uploads Committee Decision

Enables the DD (DC) to upload and publish the official Certification Committee decision, making it available for subsequent workflow activities and applicant notification.

## Module-14: Certification Committee Minutes Management Module (Total Feature - 6)

**Features Description**

### 1. Certification Committee Prepares Meeting Minutes

Enables the Certification Committee to prepare detailed meeting minutes documenting discussions, decisions, recommendations, and action items related to certification proposals.

### 2. DG Prepares and Approves Meeting Minutes

Allows the Director General (DG) to review, finalize, and approve the official meeting minutes for formal record and organizational compliance.

### 3. Director/Head of MSC Approves Meeting Minutes

Enables the Director/Head of MSC to review and approve the meeting minutes before they are officially published and archived.

### 4. Store Meeting Decisions and Minutes Digitally

Provides secure digital storage of approved meeting minutes and committee decisions for future reference, audit, and document management.

### 5. Generate Meeting-Minutes Report

Allows the system to generate comprehensive meeting-minutes reports in a standardized format for official use and reporting purposes.

### 6. Link Committee Decision with the Relevant Application and Certification Proposal

Associates each committee decision with its corresponding application and certification proposal to ensure complete traceability throughout the certification process.

## Module-15: MSC Certificate Generation and Approval Module (Total Feature - 7)

**Features Description**

### 1. Generate Certificate After Payment Confirmation and Committee Approval

Enables the system to generate the MSC certificate only after successful payment verification and Certification Committee approval, ensuring compliance with the certification workflow.

### 2. Head of MSC Generates Certificate

Allows the Head of MSC to generate the official certificate based on the approved certification decision and applicant information.

### 3. Head of MSC Approves Generated Certificate

Enables the Head of MSC to review and approve the generated certificate before it is finalized for issuance.

### 4. DD (DC) Finalizes Certificate Approval

Allows the Deputy Director (DD-DC) to complete the final approval process, authorizing the certificate for official release.

### 5. Generate Downloadable Certificate PDF

Automatically generates the approved certificate in PDF format for secure distribution, printing, and digital record-keeping.

### 6. Applicant Accesses Approved Certificate

Enables applicants to securely view and download their approved MSC certificate through the online portal.

### 7. Maintain Certificate Issuance Record and Status

Maintains a complete record of certificate generation, approval, issuance status, and validity for monitoring, reporting, and audit purposes.

## Module-16: Rejection, Rework and Follow-Up Audit Module (Total Feature - 6)

**Features Description**

### 1. Generate Rejection Note for Rejected Application, Corrective Action or Committee Decision

Allows the system to generate official rejection notes with appropriate reasons for rejected applications, corrective actions, or Certification Committee decisions.

### 2. Notify Applicant About Rejection Reason

Automatically notifies applicants of rejection decisions along with detailed reasons and guidance for the next required actions.

### 3. Allow Resubmission Where Applicable

Enables applicants to revise and resubmit applications or required documents when resubmission is permitted under the certification process.

### 4. Record Certification Committee Follow-Up Audit Decision

Allows the system to record the Certification Committee's decision requiring a follow-up audit and maintain it as part of the certification history.

### 5. Initiate Follow-Up Audit Using the Same Audit Workflow

Enables authorized officials to initiate a follow-up audit using the existing audit workflow, ensuring consistency with the standard certification process.

### 6. Track Follow-Up Audit Status and Outcome

Maintains the progress, status, and final outcome of follow-up audits, providing complete visibility and traceability until the certification process is concluded.

## Module-17: Workflow and Approval Management Module (Total Feature - 6)

**Features Description**

**1. Configure Workflow Routing Among Applicants, DD (DC), DCO, IAO, etc.**

Enables administrators to configure and manage workflow routing among applicants and BSTI officials based on predefined business rules, ensuring a standardized certification process.

**2. Role-Based Task Assignment**

Automatically assigns tasks to the appropriate users based on their roles and responsibilities, ensuring accountability and efficient workflow execution.

**3. Multi-Level Approval and Verification Flow**

Supports configurable multi-level review, verification, and approval processes to ensure every application passes through the required authorization hierarchy.

**4. Approve, Reject, Return and Forward Actions**

Allows authorized officials to approve, reject, return for correction, or forward applications and documents to the next stage of the workflow.

**5. Workflow Status Monitoring**

Provides real-time monitoring of application workflows, enabling users to track the progress and current stage of each certification request.

**6. Pending-Task Dashboard**

Displays all pending reviews, approvals, and assigned tasks for each user, helping officials manage their workload efficiently.

## Module-18: Notification and Communication Management Module (Total Feature - 10)

**Features Description**

**1. SMS Notification**

Automatically sends SMS alerts to applicants and officials regarding important events, deadlines, and workflow updates.

**2. Email Notification**

Sends email notifications for application updates, approvals, audit schedules, payment requests, and other system-generated communications.

**3. In-System Notification**

Provides real-time notifications within the application to keep users informed about pending tasks, approvals, and workflow activities.

**4 Application Submission Notification**

Automatically notifies designated BSTI officials when a new application is successfully submitted for review.

**5. Approval/Rejection Notification**

Notifies applicants and relevant officials whenever an application, document, or request is approved or rejected.

**6. Document-Shortage Notification**

Alerts applicants when mandatory documents are missing or additional information is required during the review process.

**7. Audit Notice Notification**

Automatically sends notifications regarding audit schedules, audit plans, and other audit-related updates to the concerned users.

**8. Corrective-Action Deadline Notification**

Sends reminder notifications before corrective-action deadlines to ensure timely submission and compliance.

**18.9 Payment Request Notification**

Notifies applicants when audit or certification fees are due, including invoice details and payment instructions.

**10. Certificate Approval Notification**

Automatically informs applicants once their MSC certificate has been approved and is available for download.

## Module-19: Application and Workflow Tracking Module (Total Feature - 7)

**Features Description**

**1. Track Draft, Submitted, Under Review, Pending Correction, Approved and Rejected Status**

Provides real-time tracking of application status from draft creation through submission, review, correction, approval, or rejection.

**2. Track Audit Scheduled and Audit Completed Status**

Allows applicants and officials to monitor the scheduling, progress, and completion status of Stage-1 and Stage-2 audits.

**3. Track Pending Corrective Action Status**

Displays the status of pending corrective actions, including submission deadlines, review progress, and closure status.

**4. Track Pending Payment Status**

Enables users to monitor outstanding invoices, payment confirmations, and pending financial transactions throughout the certification process.

**5. Track Certificate Generated and Certificate Approved Status**

Provides visibility into certificate generation, approval, and issuance until the certification process is successfully completed.

### 6. Applicant Dashboard for Application Progress

Provides applicants with a personalized dashboard displaying application status, notifications, pending actions, payment status, and certification progress.

### 7. Officer Dashboard for Pending Approvals

Provides BSTI officials with a centralized dashboard showing pending reviews, approvals, assigned tasks, and workflow activities based on their roles.

## Module-20: MSC Reports and Dashboard Module (Total Feature - 9)

### Features Description

### 1. Application Status Report

Generates reports showing the status and progress of all MSC certification applications to support operational monitoring and decision-making.

### 2. Audit Schedule Report

Provides detailed reports of scheduled, completed, postponed, and upcoming audits along with assigned audit teams and timelines.

### 3. Pending Approval Report

Generates reports identifying applications, documents, and requests awaiting review or approval by authorized officials.

### 4. Corrective Action Report

Provides reports on identified non-conformities, submitted corrective actions, review outcomes, and findings closure status.

### 5. Payment Report

Generates comprehensive reports of invoices, payment transactions, outstanding dues, and payment confirmations for financial monitoring.

### 6. Certificate Issuance Report

Provides reports on generated and issued certificates, including issuance dates, approval status, and certificate validity information.

### 7. Audit Findings Report

Generates reports summarizing audit findings, non-conformities, corrective actions, and overall audit outcomes.

### 8. Meeting Minutes Report

Provides reports containing Certification Committee meeting minutes, decisions, recommendations, and related certification records.

### 9. Dashboard-Based Workflow Monitoring

Provides an interactive dashboard with real-time KPIs, workflow status, pending tasks, audit progress, application statistics, and operational insights for effective management.

## Module-21: Audit Trail and Activity Log Module (Total Feature - 7)

**Features Description**

**1. Login/Logout History**

Maintains a complete record of user login and logout activities, including timestamps, to support system security and user accountability.

**2. Data Modification History**

Records all data creation, modification, and deletion activities, enabling administrators to track changes and maintain data integrity.

**3. Approval and Rejection Action History**

Maintains a detailed history of all approval, rejection, return, and forwarding actions performed throughout the certification workflow.

**4. Document Upload/Download History**

Tracks all document upload and download activities, providing a complete audit trail of document access and management.

**5. Payment Activity History**

Records all payment-related transactions, including invoices, payment confirmations, refunds (if applicable), and transaction timestamps for financial auditing.

**6. Certificate Generation History**

Maintains a history of certificate generation, approvals, issuance, reissuance, and related activities for complete certification traceability.

**7. User-Wise Activity Tracking for Accountability**

Tracks system activities performed by each user, ensuring accountability, transparency, and compliance with organizational audit requirements.

## Module-22: Role-Based User and Access Management Module (Total Feature - 5)

**Features Description**

**1. Separate Access for Applicant, DD (DC), DCO, IAO, DD (IA), Head of MSC, Audit Team, DG and Certification Committee**

Provides dedicated system access for each stakeholder with permissions tailored to their assigned roles and responsibilities within the certification process.

**2. Role-Based Menu and Feature Permissions**

Controls system menus, modules, and features based on user roles, ensuring that users can access only the functions relevant to their responsibilities.

**3. Authentication/Login Control**

Implements secure user authentication and login mechanisms to prevent unauthorized access and protect system resources.

### 4. Restrict Certificate Approval to Authorized Officials

Ensures that certificate approval functions are accessible only to designated authorized officials in accordance with the defined approval hierarchy.

### 5. Secure User-Session Management

Manages user sessions securely by handling session timeouts, automatic logout, and access controls to protect against unauthorized system usage.

## Module-23: External Integration Management Module (Total Feature - 7)

### Features Description

### 1. National Payment Gateway Integration

Integrates with the National Payment Gateway to facilitate secure online payment processing and automatic payment confirmation.

### 2. SMS Gateway Integration

Integrates with SMS gateway services to deliver automated notifications, alerts, reminders, and workflow updates to users.

### 3. Email Service Integration

Integrates with email services to send automated notifications, approvals, audit notices, payment requests, and other official communications.

### 4. PDF Generation Service Integration

Integrates with PDF generation services to produce official documents, reports, invoices, certificates, and meeting notices in standardized PDF format.

### 5. Digital Signature Module Integration

Supports integration with digital signature services to enable secure electronic approval and authentication of official documents.

### 6. Integration with Existing BSTI eService Modules

Enables seamless data exchange and interoperability with existing BSTI eService modules to ensure a unified digital service ecosystem.

### 7. Integration with Document-Management and User-Management Modules

Facilitates integration with centralized document management and user management systems for secure document handling and unified user administration.

## Module-24: Certificate Verification and QR Code (Total Feature - 5)

### Features Description

### 1 QR-Based Certificate Verification Facility

Generates a unique QR code for each issued certificate, allowing users to verify certificate authenticity through quick and secure scanning.

### 2 Public Certificate Authenticity Verification

Provides a public verification portal where anyone can confirm the authenticity of an issued MSC certificate without requiring system login.

### 3 Certificate Number Search Facility

Allows users to search and verify certificates using the unique certificate number issued by the system.

### 4 Certificate Validity-Status Display

Displays the current status of a certificate, including whether it is valid, expired, suspended, revoked, or otherwise inactive.

### 5 Verification History and Scan Tracking

Maintains a history of certificate verification requests and QR code scans, supporting monitoring, reporting, and security auditing.

## Service-18: MSC Re-certification Management System

The proposed **MSC Re-certification Management System** is a comprehensive digital platform designed to automate and manage the complete re-certification lifecycle, from application submission to certificate issuance. The system enables applicants to submit re-certification applications online, upload required documents, complete fee payments, and track application status through a centralized portal. Submitted applications undergo a structured multi-level review process involving the Deputy Director (DD), Documentation & Certification Officer (DCO), Director/Head of MSC, and other authorized officials to ensure completeness and regulatory compliance. The solution supports automated shortfall management, agreement preparation, audit planning, man-day calculation, auditor assignment, and audit scheduling. It further manages Stage-wise re-certification audits, audit findings, corrective actions, improvement notices, and compliance verification with integrated evidence management. Technical recommendations, re-certification proposals, MSC intimations, and certification bills are processed through configurable approval workflows before being presented to the Certification Committee for final decision. The system also automates payment processing, certificate generation, digital certificate issuance, and document management while maintaining complete workflow traceability through audit trails. Integrated notification services keep applicants informed throughout every stage of the process. By digitizing the end-to-end re-certification workflow, the solution improves operational efficiency, reduces manual intervention, enhances transparency, strengthens regulatory compliance, and ensures timely delivery of re-certification services.

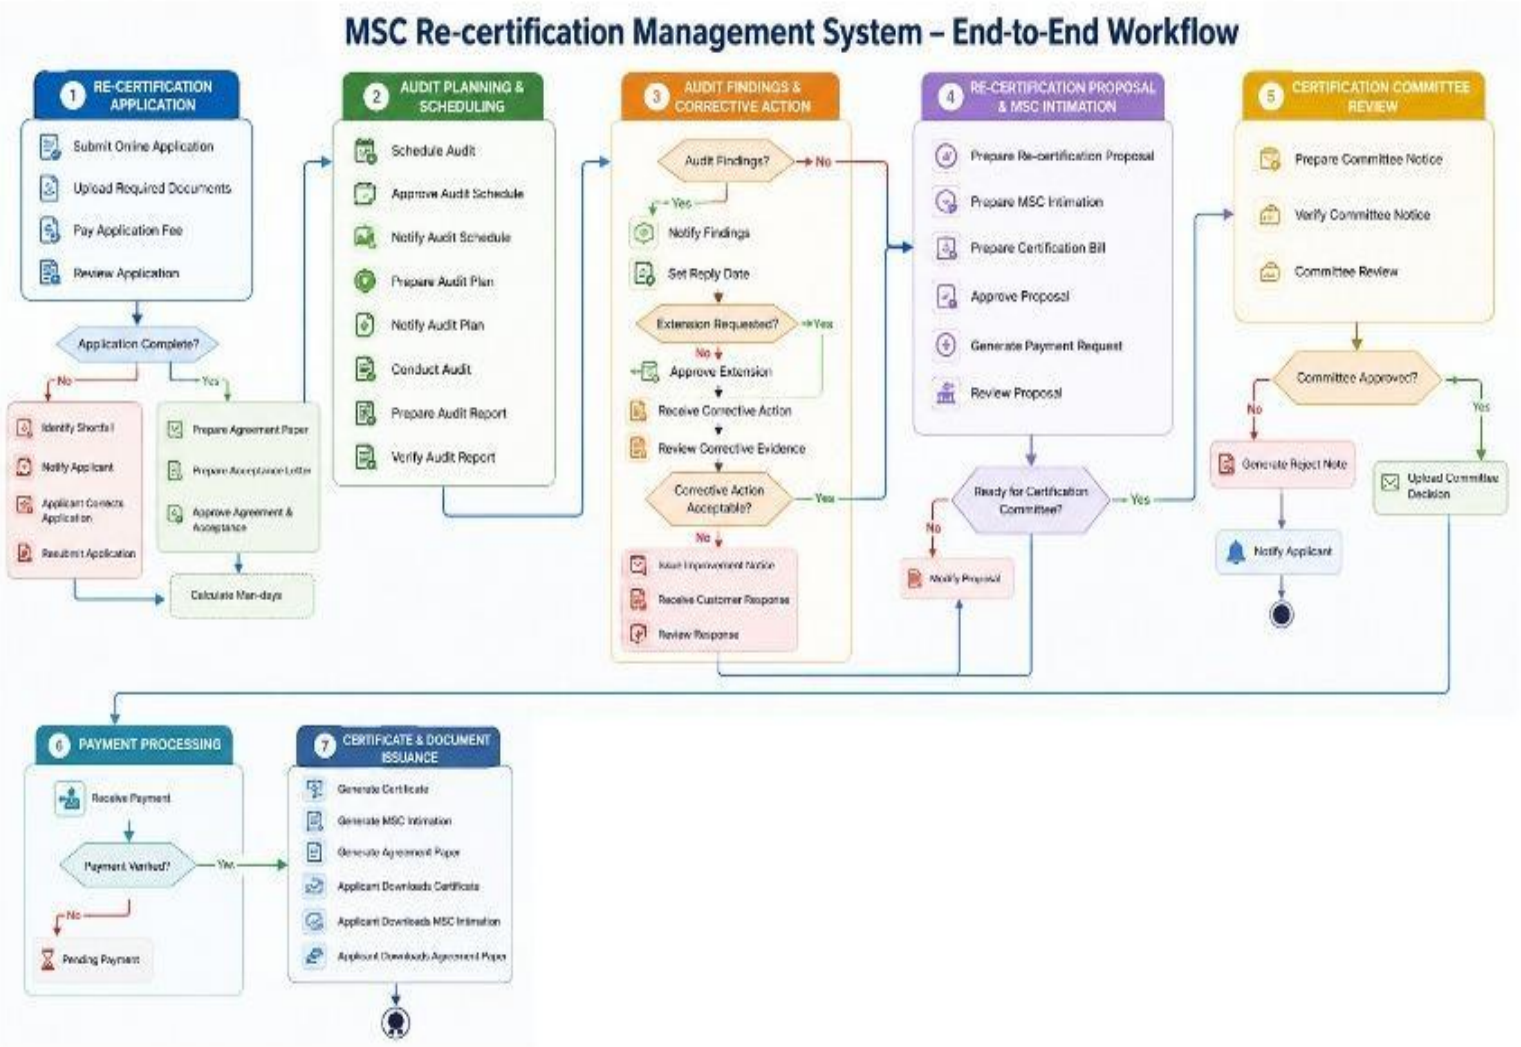

Fig: Workflow of MSC Re-Certification System

## Module-1: Re-certification Application (Total Feature - 7)

**Features Description**

**1. Online Re-certification Application:**

Enables applicants to submit re-certification applications electronically.

**2. Application Form Management:**

Captures all required applicant, product, and certification information.

**3. Supporting Document Upload:**

Allows applicants to upload mandatory supporting documents.

**4. Re-certification Fee Payment:**

Supports online payment of applicable re-certification fees.

**5. Application Submission:**

Finalizes and submits completed applications for review.

**6. Application Tracking:**

Allows applicants to monitor application status throughout the process.

**7. Application History:**

Maintains historical records of previous re-certification applications.

## Module - 2: Application Review & Agreement Management (Total Feature - 10)

**Features Description**

**1. DD (DC) Application Review:**

Enables the Deputy Director to review submitted applications.

**2. DCO Application Review:**

Supports detailed document verification by the Documentation & Certification Officer.

**3. Shortfall Identification:**

Identifies missing documents or non-compliance issues.

**4. Shortfall Notification:**

Notifies applicants regarding identified deficiencies.

**5. Customer Resubmission:**

Allows applicants to submit corrected information and documents.

**6. Acceptance Letter Preparation:**

Generates official acceptance letters for eligible applications.

**7. Agreement Paper Generation:**

Prepares re-certification agreement documents.

**8. DD (DC) Approval:**

Approves acceptance letters and agreement documents.

**9. Director/Head of MSC Approval:**

Provides final approval of agreement documents.

**10. Agreement Notification to Applicant:**

Sends approved agreements to applicants.

## Module - 3: Audit Planning & Scheduling (Total Feature - 10)

**Features Description**

**1. Man-Day Calculation:**

Automatically calculates audit effort based on predefined criteria.

**2. Auditor Assignment:**

Assigns qualified auditors for re-certification audits.

**3. Audit Team Assignment:**

Allocates audit team members according to expertise.

**4. Re-certification Audit Scheduling:**

Schedules audit activities.

**5. Audit Date Rescheduling:**

Supports audit date modifications when required.

**6. Audit Notice Generation:**

Generates official audit notices.

**7. Audit Calendar Management:**

Maintains centralized audit schedules.

**8. DD (IA) Verification:**

Verifies audit planning activities.

**9. Director Approval:**

Approves audit schedules and plans.

**10. Audit Schedule Notification:**

Notifies applicants of scheduled audits.

## Module - 4: Re-certification Audit Management (Total Feature - 9)

**Features Description**

**1. Audit Plan Preparation:**

Prepares audit plans before audit execution.

**2. Audit Plan Approval:**

Approves audit plans before implementation.

**3. Audit Notification:**

Notifies applicants regarding audit plans.

**4. Audit Execution:**

Records audit activities conducted by auditors.

**5. Audit Checklist:**

Supports standardized audit checklists.

**6. Audit Observation Recording:**

Records audit observations.

**7. Audit Findings Management:**

Maintains identified audit findings.

**8. Audit Report Preparation:**

Generates official audit reports.

**9. Audit Report Approval:**

Approves completed audit reports.

## Module - 5: Audit Findings & Corrective Action Management (Total Feature -10)

**Features Description**

**1. Findings Review:**

Reviews audit findings for corrective action.

**2. Finding Notification:**

Notifies applicants of identified findings.

**3. Reply Date Assignment:**

Assigns deadlines for corrective action submission.

**4. Extension Request:**

Allows applicants to request deadline extensions.

**5. Extension Approval:**

Approves or rejects extension requests.

**6. Corrective Action Submission:**

Allows applicants to submit corrective actions.

**7. Evidence Upload:**

Supports uploading evidence of corrective actions.

**8. Evidence Verification:**

Verifies submitted evidence.

**9. Corrective Action Acceptance:**

Approves satisfactory corrective actions.

**10. Corrective Action Rejection:**

Rejects insufficient corrective actions.

## 6. Improvement Notice Management Module (Total Feature - 7)

**Features Description**

**1. Improvement Notice Generation:**

Generates formal improvement notices.

**2. DD (DC) Approval:**

Approves improvement notices.

**3. Director/Head of MSC Approval:**

Provides final approval before issuance.

**4. Notice Notification:**

Sends improvement notices to applicants.

**5. Customer Response Submission:**

Allows applicants to respond to notices.

**6. Follow-up Verification:**

Verifies corrective responses.

**7. Final Acceptance:**

Confirms successful completion of improvement requirements.

## 7. Technical Review & Proposal Management Module (Total Feature - 6)

**Features Description**

**1. Re-certification Proposal Preparation:**

Prepares technical proposals for re-certification.

**2. MSC Intimation Preparation:**

Generates official MSC intimation documents.

**3. Certification Bill Generation:**

Produces certification fee bills.

**4. Technical Recommendation:**

Provides recommendations based on audit outcomes.

**5. Proposal Review:**

Reviews technical proposals.

**6. Proposal Approval:**

Approves proposals before committee review.

## 8. Certification Committee Management Module (Total Feature - 9)

**Features Description**

**1. Certification Committee Meeting Notice:**

Generates committee meeting notices.

**2. Meeting Schedule:**

Schedules certification committee meetings.

**3. Director Verification:**

Verifies committee documents.

**4. DG Approval:**

Obtains approval from the Director General.

**5. Committee Review:**

Supports committee review of applications.

**6. Committee Decision Recording:**

Records committee decisions.

**7. Decision Upload:**

Publishes approved committee decisions.

**8. Approval History:**

Maintains historical committee decisions.

**9. Rejection Decision Management:**

Records rejected applications.

## 9. Payment Processing Module (Total Feature - 7)

**Features Description**

**1. Certification Bill Generation:**

Generates payable certification bills.

**2. Payment Request:**

Sends payment requests to applicants.

**3. Payment Notification:**

Notifies applicants regarding pending payments.

**4. Payment Collection:**

Records received payments.

**5. Payment Verification:**

Verifies payment transactions.

**6. Payment Confirmation:**

Confirms successful payment.

**7. Payment Status Tracking:**

Tracks payment progress.

## 10. Certificate & Document Management Module (Total Feature -7)

**Features Description**

**1. Certificate Generation:**

Generates approved re-certification certificates.

**2. Certificate Number Generation:**

Assigns unique certificate numbers.

**3. Digital Certificate Issuance:**

Issues digitally generated certificates.

**4. MSC Intimation Generation:**

Produces official MSC intimation documents.

**5. Agreement Paper Management:**

Stores approved agreement documents.

**6. Certificate Download:**

Allows applicants to download issued certificates.

**7. Certificate Repository:**

Maintains centralized certificate records.

## 11. Rejection Management Module (Total Feature - 4)

**Features Description**

**1. Rejection Note Generation:**

Generates official rejection notes.

**2. Rejection Approval:**

Routes rejection notes through the approval workflow.

**3. Customer Notification:**

Notifies applicants of rejection decisions.

**4. Rejection History:**

Maintains records of rejected applications.

## 12. Workflow & Task Management Module (Total Feature - 7)

**Features Description**

**1. Role-based Task Assignment:**

Assigns tasks according to user responsibilities.

**2. Multi-Level Approval Workflow:**

Supports hierarchical approval processes.

**3. Application Forwarding:**

Routes applications between workflow stages.

**4. Status Tracking:**

Tracks application progress in real time.

**5. Pending Task Dashboard:**

Displays pending tasks for authorized users.

**6. Workflow Remarks:**

Records workflow comments and decisions.

**7. Audit Trail:**

Maintains a complete history of workflow activities.

## 13. Notification Module (Total Feature - 10)

**Features Description**

**1. Shortfall Notification:**

Alerts applicants regarding application deficiencies.

**2. Agreement Notification:**

Sends approved agreement documents.

**3. Audit Schedule Notification:**

Notifies applicants of audit schedules.

**4. Audit Plan Notification:**

Share audit plans with applicants.

**5. Finding Notification:**

Informs applicants of audit findings.

**6. Improvement Notice Notification:**

Send improvement notices.

**7. Payment Request Notification:**

Notifies applicants regarding pending payments.

**8. Committee Meeting Notification:**

Sends committee-related notifications.

**9. Certificate Issued Notification:**

Confirms certificate issuance.

**10. Rejection Notification:**

Notifies applicants of rejected applications.

## 14. Document Management Module (Total Feature - 10)

**Features Description**

**1. Application Document Repository:**

Stores submitted application documents.

**2. Agreement Paper Management:**

Maintains agreement documents.

**3. Audit Plan Management:**

Stores audit plans.

**4. Audit Report Repository:**

Maintains audit reports.

**5. Corrective Action Repository:**

Stores corrective action records.

**6. Evidence Management:**

Maintains uploaded evidence files.

**7. Proposal Repository:**

Stores technical proposals.

**8. MSC Intimation Repository:**

Maintains official MSC intimation documents.

**9. Certificate Repository:**

Stores issued certificates.

**10. Rejection Note Repository:**

Maintains rejection-related documents.

## Service-19: PCR Registration New Feature Description

The PCR Registration System is a comprehensive digital platform designed to automate the complete registration process, from application submission to certificate issuance. Applicants can submit online applications, upload required documents, and pay registration fees through an integrated payment gateway. The system automatically generates a unique Application ID for tracking purposes. Submitted applications undergo a structured review process where authorized officers verify the provided information and supporting documents. If any discrepancies or missing information are identified, applicants are notified to submit corrections through an integrated shortfall management process. Once the application is complete, inspectors are assigned, inspection schedules are prepared, and physical inspections are conducted. Inspection findings, photographs, remarks, and reports are recorded within the system and subsequently reviewed by the Assistant Director (AD) and Deputy Director (DD) for verification. After successful verification, the Director makes the final decision by approving, rejecting, or requesting re-inspection when additional verification is required. Upon approval, the system automatically generates the registration certificate, which applicants can securely download online. Throughout the entire process, applicants receive real-time email and SMS notifications regarding application status, payments, inspections, approvals, and other workflow updates. The system also supports multiple inspection cycles, centralized Head Office and Regional Office workflows, role-based access control, and comprehensive user management to ensure transparency, accountability, operational efficiency, and regulatory compliance across the PCR registration process.

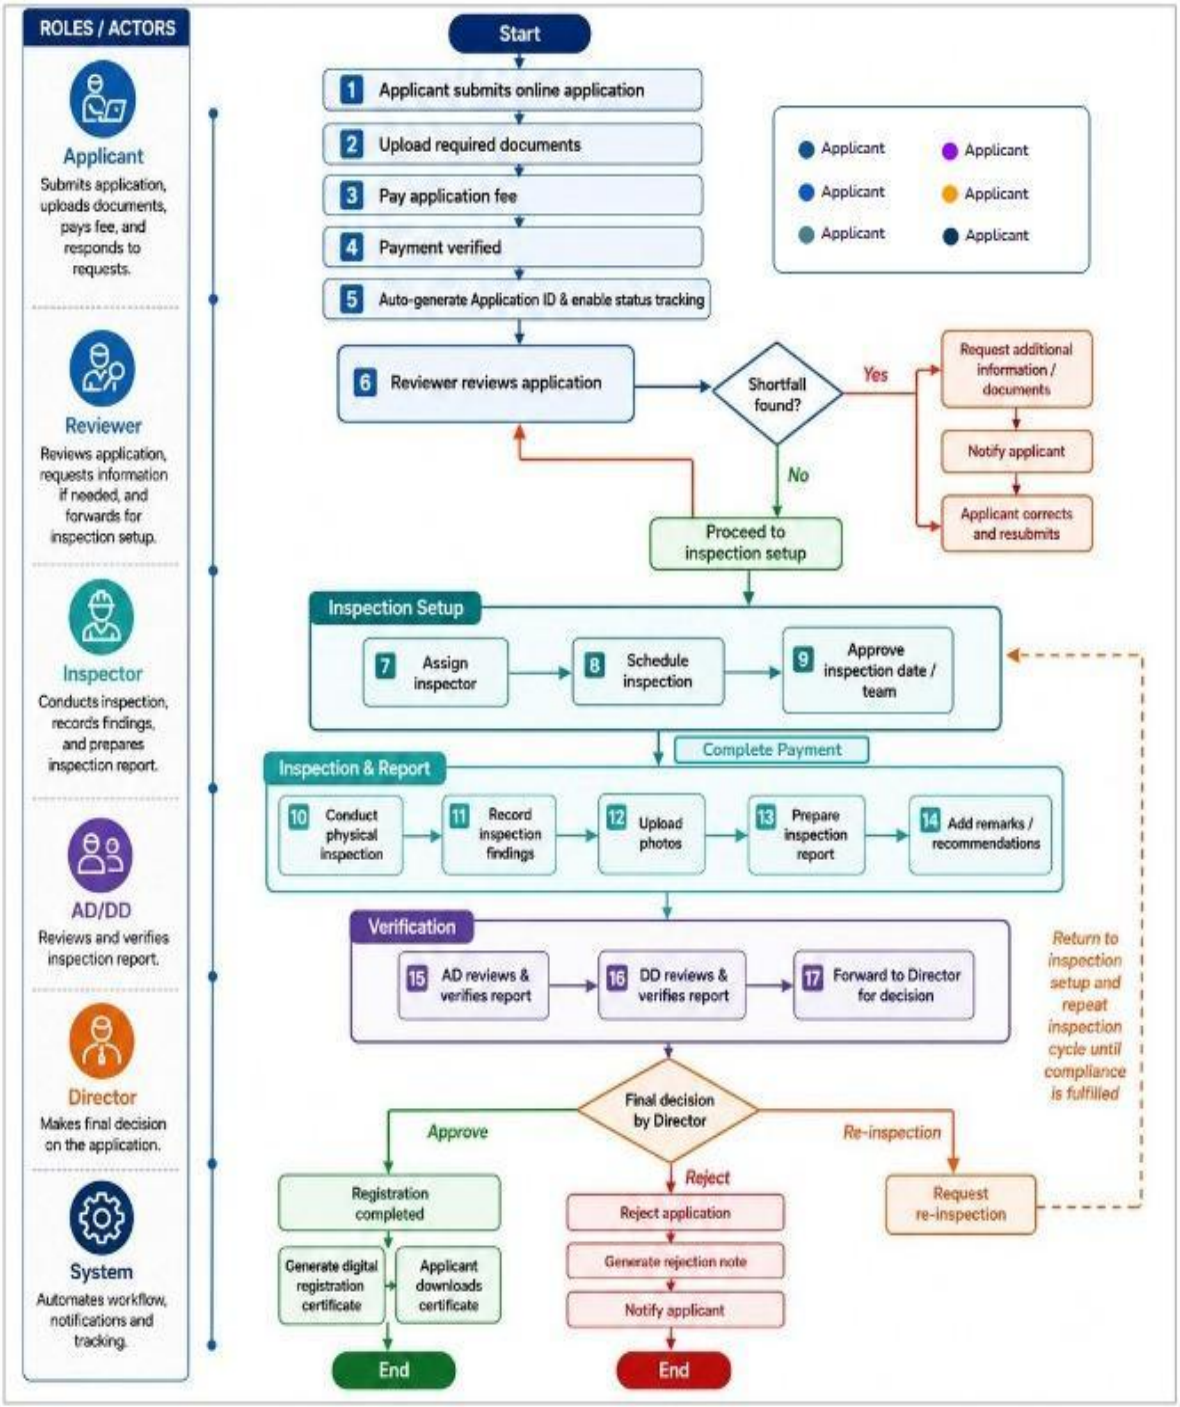

Fig: PCR Registration Service Workflow

## Module-1. Application Submission (Total Feature - 4)

**Features Description**

**1. Online Application Submission**

Allows applicants to submit registration applications through an online portal by providing all required information. The system validates mandatory fields before accepting the application.

**2. Document Upload**

Enables applicants to upload all required supporting documents in approved file formats. Uploaded documents are securely stored and linked with the application for further review.

**3. Application Fee Payment**

Allows applicants to pay the prescribed application fee through the integrated online payment gateway. Payment status is automatically recorded against the submitted application.

**4. Auto Application ID Generation**

Automatically generates a unique Application ID upon successful submission. The generated ID is used for application tracking and future correspondence.

## Module-2. Application Review & Shortfall Management (Total Feature - 5)

**Features Description**

**1. Application Review**

Allows authorized officers to review submitted applications and verify the completeness of information and supporting documents before further processing.

**2. Shortfall Identification**

Enables reviewers to identify missing information, incorrect data, or incomplete documentation during the verification process.

**3. Required Document Request**

Allows reviewers to request additional documents or corrections from the applicant whenever required. The request is recorded within the application history.

**4. Shortfall Correction & Resubmission Loop**

Applicants can update the requested information and resubmit the application for further review. The review cycle continues until all requirements are fulfilled.

**5. Applicant Notification**

Automatically informs applicants regarding review status, identified shortfalls, and resubmission requirements through the notification system.

## Module-3. Payment Processing (Total Feature - 4)

**Features Description**

**1. Fee Display**

Displays the applicable fees dynamically based on the selected service and predefined fee structure.

**2. Payment Collection**

Collects payments securely through integrated payment gateways while maintaining transaction records for auditing purposes.

**3. Payment Verification**

Verifies successful payment transactions automatically or through authorized verification before processing the application further.

**4. Automatic Status Update**

Automatically updates the application status once payment is successfully completed and verified.

## Module-4. Inspection Setup (Total Feature - 3)

**Features Description**

**1. Inspector Assignment**

Allows authorized officials to assign inspectors based on workload, expertise, or jurisdiction.

**2. Inspection Scheduling**

Enables scheduling of inspection dates according to availability and organizational workflow requirements.

**3. Inspection Date/Team Setup & Approval**

Allows designated authorities to finalize inspection teams and approve the inspection schedule before execution.

## Module-5. Inspection & Report (Total Feature - 5)

**Features Description**

**1. Physical Inspection**

Allows inspectors to conduct on-site inspections according to defined regulatory guidelines and inspection criteria.

**2. Inspection Findings**

Records observations, compliance status, and identified issues during the inspection process.

**3. Report Preparation**

Enables inspectors to prepare structured inspection reports based on collected findings and observations.

**4. Photo Upload**

Allows inspectors to upload inspection photographs as supporting evidence for the inspection report.

### 5. Remarks Entry

Provides inspectors with the option to include additional comments, recommendations, or observations in the inspection report.

## Module-6. Verification Module (AD/DD) (Total Feature - 3)

**Features Description**

### 1. Inspection Report Review

Allows Assistant Director (AD) and Deputy Director (DD) to review submitted inspection reports for completeness and accuracy.

### 2. Verification

Enables authorized officers to verify inspection findings before forwarding them for final approval.

### 3. Comments & Feedback

Allows reviewers to provide comments, recommendations, or clarification requests during the verification process.

## Module-7. Approval Management (Total Feature - 3)

**Features Description**

### 1. Director Approval

Allows the Director to review verified applications and provide final approval for registration based on compliance requirements.

### 2. Rejection

Allows the Director to reject applications with appropriate reasons whenever regulatory requirements are not fulfilled.

### 3. Re-Inspection Decision

Enables the Director to request a re-inspection if additional verification is required before making a final decision.

## Module-8. Registration Complete (Total Feature - 3)

**Features Description**

### 1. Registration Completion

Finalizes the registration process after receiving all required approvals and successful verification.

### 2. Registration Certificate Generation

Automatically generates the official registration certificate upon successful completion of the registration process.

### 3. Download Link

Provides applicants with a secure link to download the issued registration certificate from the system.

## Module-9. Rejection Management (Total Feature - 2)

**Features Description**

**1. Rejection Button Generation**

Provides authorized users with the option to reject an application directly from the workflow with proper justification.

**2. Applicant Notification**

Automatically notifies applicants regarding application rejection along with the stated reasons and further instructions.

## Module-10. Notification Management (Total Feature - 3)

**Features Description**

**1. Email Notification**

Automatically sends email notifications for important application events and workflow updates.

**2. SMS Notification**

Sends SMS alerts to applicants regarding application progress, payment confirmation, and approval status.

**3. Status Update Notification**

Provides real-time notifications whenever the application status changes throughout the workflow.

## Module-11. Re-Inspection Management (Total Feature - 3)

**Features Description**

**1. Re-Inspection Request**

Allows authorized officials to initiate a re-inspection request whenever additional verification is necessary.

**2. Return to Inspection Setup**

Automatically routes the application back to the inspection scheduling stage for re-inspection planning.

**3. Repeat Inspection Cycle**

Supports multiple inspection cycles until all compliance requirements are successfully fulfilled.

## Module-12. User & Role Management (Total Feature - 7)

**Features Description**

**1. Applicant**

Allows applicants to submit applications, upload documents, make payments, and track application progress.

**2. Reviewer**

Enables reviewers to examine applications, identify shortfalls, and request additional information from applicants.

### 3. Inspector

Allows inspectors to conduct inspections, record findings, upload evidence, and prepare inspection reports.

### 4. AD

Provides Assistant Directors with authority to verify inspection reports and forward eligible applications for higher approval.

### 5. DD

Allows Deputy Directors to review verified applications and recommend them for final approval.

### 6. Director

Provides the Director with authority to approve, reject, or request re-inspection before final registration.

### 7. System Admin Role Management

Allows administrators to create, manage, and assign user roles, permissions, and access controls across the system.

## Module-13. Regional Office Workflow (Total Feature - 3)

**Features Description**

### 1. Head Office Workflow

Supports centralized application processing and approval activities managed by the Head Office.

### 2. Regional Office Workflow

Enables regional offices to process applications, perform inspections, and complete assigned workflow activities independently.

### 3. Wing Head-Centric Processing

Allows Wing Heads to supervise, monitor, and approve workflow activities within their respective organizational units.

## Service-20: PCR Registration Renewal

The proposed PCR Registration Management System is a comprehensive digital platform designed to automate and streamline the complete PCR registration process from online application submission to registration certificate issuance. The system enables applicants to submit applications online, upload required documents, pay registration fees through an integrated payment gateway, and receive automatically generated application IDs with real-time status tracking. Applications are processed through a structured review workflow where reviewers assess submissions, identify shortfalls, request additional information, and manage correction and resubmission cycles while keeping applicants informed through automated email and SMS notifications.

Following successful document review, the system manages inspection planning by assigning inspectors, scheduling inspections, and approving inspection teams. Inspectors conduct physical inspections, capture findings, upload photographs, prepare inspection reports, and record remarks for further evaluation. Inspection reports are reviewed and verified by authorized officers (AD/DD) before being forwarded for Director approval. Based on the evaluation, the Director may approve the registration, reject the application, or initiate a re-inspection process. If re-inspection is required, the application automatically returns to the inspection workflow until all compliance requirements are fulfilled. Upon final approval, the system generates a digital registration certificate with download facilities for applicants. The solution also supports role-based access control, Head Office and Regional Office workflows, automated notifications, workflow tracking, and centralized processing, providing a secure, transparent, paperless, and efficient environment for delivering PCR Registration services.

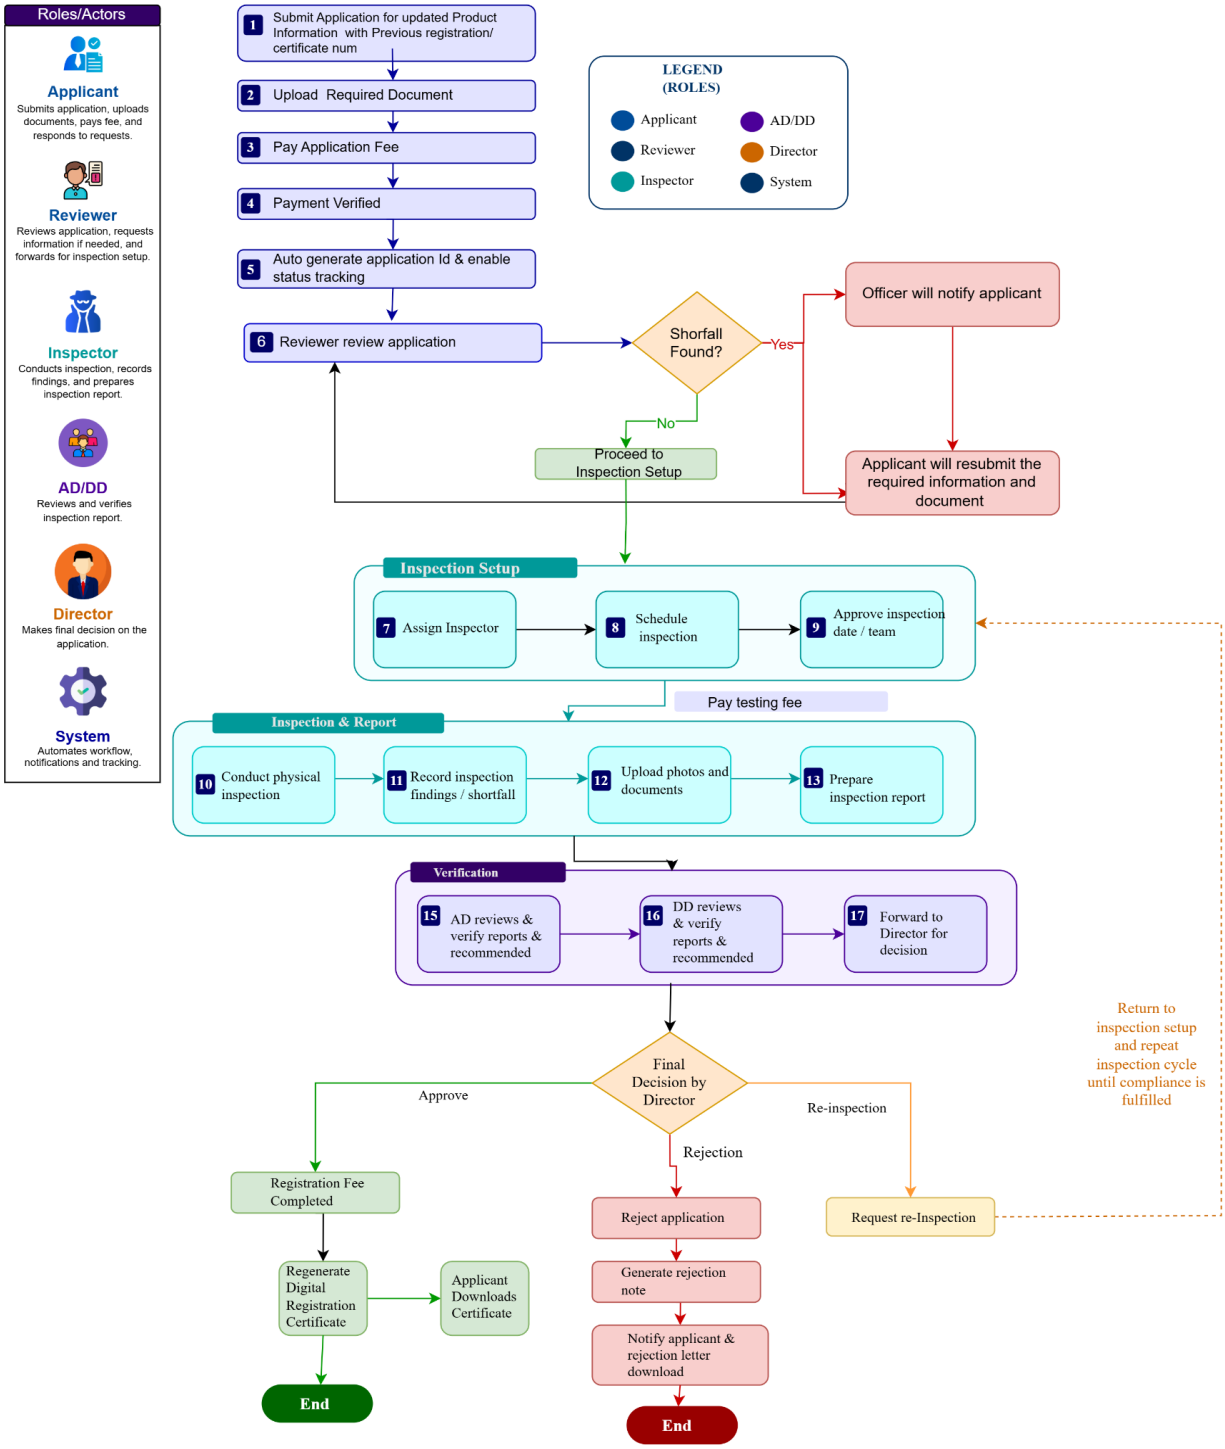

Figure Name: PCR Renewal Service Workflow

## Module - 1: Application Submission (Total Feature - 4)

**Features Description**

### 1. Online Application Submission

Allows applicants to submit registration applications through an online portal by providing all required information. The system validates mandatory fields before accepting the application.

### 2. Document Upload

Enables applicants to upload all required supporting documents in approved file formats. Uploaded documents are securely stored and linked with the application for further review.

### 3. Application Fee Payment

Allows applicants to pay the prescribed application fee through the integrated online payment gateway. Payment status is automatically recorded against the submitted application.

### 4. Auto Application ID Generation

Automatically generates a unique Application ID upon successful submission. The generated ID is used for application tracking and future correspondence.

## Module - 2: Application Review & Shortfall Management (Total Feature - 5)

**Features Description**

### 1. Application Review

Allows authorized officers to review submitted applications and verify the completeness of information and supporting documents before further processing.

### 2. Shortfall Identification

Enables reviewers to identify missing information, incorrect data, or incomplete documentation during the verification process.

### 3. Required Document Request

Allows reviewers to request additional documents or corrections from the applicant whenever required. The request is recorded within the application history.

### 4. Shortfall Correction & Resubmission Loop

Applicants can update the requested information and resubmit the application for further review. The review cycle continues until all requirements are fulfilled.

### 5. Applicant Notification

Automatically informs applicants regarding review status, identified shortfalls, and resubmission requirements through the notification system.

## Module - 3. Payment Processing (Total Feature - 4)

**Features Description**

### 1. Fee Display

Displays the applicable fees dynamically based on the selected service and predefined fee structure.

### 2. Payment Collection

Collects payments securely through integrated payment gateways while maintaining transaction records for auditing purposes.

### 3. Payment Verification

Verifies successful payment transactions automatically or through authorized verification before processing the application further.

### 4. Automatic Status Update

Automatically updates the application status once payment is successfully completed and verified.

## Module-4. Inspection Setup (Total Feature - 3)

**Features Description**

### 1. Inspector Assignment

Allows authorized officials to assign inspectors based on workload, expertise, or jurisdiction.

### 2. Inspection Scheduling

Enables scheduling of inspection dates according to availability and organizational workflow requirements.

### 3. Inspection Date/Team Setup & Approval

Allows designated authorities to finalize inspection teams and approve the inspection schedule before execution.

## Module-5. Inspection & Report (Total Feature - 5)

**Features Description**

### 1. Physical Inspection

Allows inspectors to conduct on-site inspections according to defined regulatory guidelines and inspection criteria.

### 2. Inspection Findings

Records observations, compliance status, and identified issues during the inspection process.

### 3. Report Preparation

Enables inspectors to prepare structured inspection reports based on collected findings and observations.

### 4. Photo Upload

Allows inspectors to upload inspection photographs as supporting evidence for the inspection report.

### 5. Remarks Entry

Provides inspectors with the option to include additional comments, recommendations, or observations in the inspection report.

## Module-6. Verification Module (AD/DD) (Total Feature - 3)

**Features Description**

### 1. Inspection Report Review

Allows Assistant Director (AD) and Deputy Director (DD) to review submitted inspection reports for completeness and accuracy.

### 2. Verification

Enables authorized officers to verify inspection findings before forwarding them for final approval.

### 3. Comments & Feedback

Allows reviewers to provide comments, recommendations, or clarification requests during the verification process.

## Module-7. Approval Management (Total Feature - 3)

**Features Description**

### 1. Director Approval

Allows the Director to review verified applications and provide final approval for registration based on compliance requirements.

### 2. Rejection

Allows the Director to reject applications with appropriate reasons whenever regulatory requirements are not fulfilled.

### 3. Re-Inspection Decision

Enables the Director to request a re-inspection if additional verification is required before making a final decision.

## Module-8. Registration Complete (Total Feature - 3)

**Features Description**

### 1. Registration Completion

Finalizes the registration process after receiving all required approvals and successful verification.

### 2. Registration Certificate Generation

Automatically generates the official registration certificate upon successful completion of the registration process.

### 3. Download Link

Provides applicants with a secure link to download the issued registration certificate from the system.

## Module-9. Rejection Management (Total Feature - 2)

**Features Description**

### 1. Rejection Button Generation

Provides authorized users with the option to reject an application directly from the workflow with proper justification.

### 2. Applicant Notification

Automatically notifies applicants regarding application rejection along with the stated reasons and further instructions.

## Module-10. Notification Management (Total Feature - 3)

**Features Description**

### 1. Email Notification

Automatically sends email notifications for important application events and workflow updates.

### 2. SMS Notification

Sends SMS alerts to applicants regarding application progress, payment confirmation, and approval status.

### 3. Status Update Notification

Provides real-time notifications whenever the application status changes throughout the workflow.

## Module-11. Re-Inspection Management (Total Feature - 3)

**Features Description**

### 1. Re-Inspection Request

Allows authorized officials to initiate a re-inspection request whenever additional verification is necessary.

### 2. Return to Inspection Setup

Automatically routes the application back to the inspection scheduling stage for re-inspection planning.

### 3. Repeat Inspection Cycle

Supports multiple inspection cycles until all compliance requirements are successfully fulfilled.

## Module-12. User & Role Management (Total Feature - 7)

**Features Description**

### 1. Applicant

Allows applicants to submit applications, upload documents, make payments, and track application progress.

### 2. Reviewer

Enables reviewers to examine applications, identify shortfalls, and request additional information from applicants.

### 3. Inspector

Allows inspectors to conduct inspections, record findings, upload evidence, and prepare inspection reports.

### 4. AD

Provides Assistant Directors with authority to verify inspection reports and forward eligible applications for higher approval.

### 5. DD

Allows Deputy Directors to review verified applications and recommend them for final approval.

### 6. Director

Provides the Director with authority to approve, reject, or request re-inspection before final registration.

### 7. System Admin Role Management

Allows administrators to create, manage, and assign user roles, permissions, and access controls across the system.

## Module-13. Regional Office Workflow (Total Feature - 3)

**Features Description**

### 1. Head Office Workflow

Supports centralized application processing and approval activities managed by the Head Office.

### 2. Regional Office Workflow

Enables regional offices to process applications, perform inspections, and complete assigned workflow activities independently.

### 3. Wing Head-Centric Processing

Allows Wing Heads to supervise, monitor, and approve workflow activities within their respective organizational units.

## Service-21: PCR Brand Inclusion

The proposed PCR Brand Inclusion Service Management System is a comprehensive digital platform designed to automate and manage the complete PCR Brand Inclusion process from application submission to final approval. The system enables applicants to submit brand inclusion applications online, upload required documents, and complete application fee payments through an integrated payment processing module with automatic verification and status updates. Submitted applications undergo a structured review process where reviewers assess the application, identify shortfalls, request additional information, and manage correction and resubmission cycles while keeping applicants informed through automated notifications. Once the application is complete, inspection activities are scheduled, inspectors are assigned, and inspection reports are prepared with findings, photographs, and remarks. Laboratory testing is conducted where required, and the inspection and laboratory reports are verified by AD/DD officials before being forwarded to the Director for the final decision. Based on the Director's decision, the application may be approved, rejected, or sent for re-inspection. Approved applications proceed to brand registration and PCR Brand Inclusion certificate generation, while rejected applications trigger rejection notifications and record management. Re-inspection requests return the application to the inspection stage for further evaluation. The system also provides email, SMS, and status update notifications, comprehensive role-based access control, and supports both Head Office and Regional Office workflows, ensuring a transparent, standardized, and efficient PCR Brand Inclusion service across the organization.

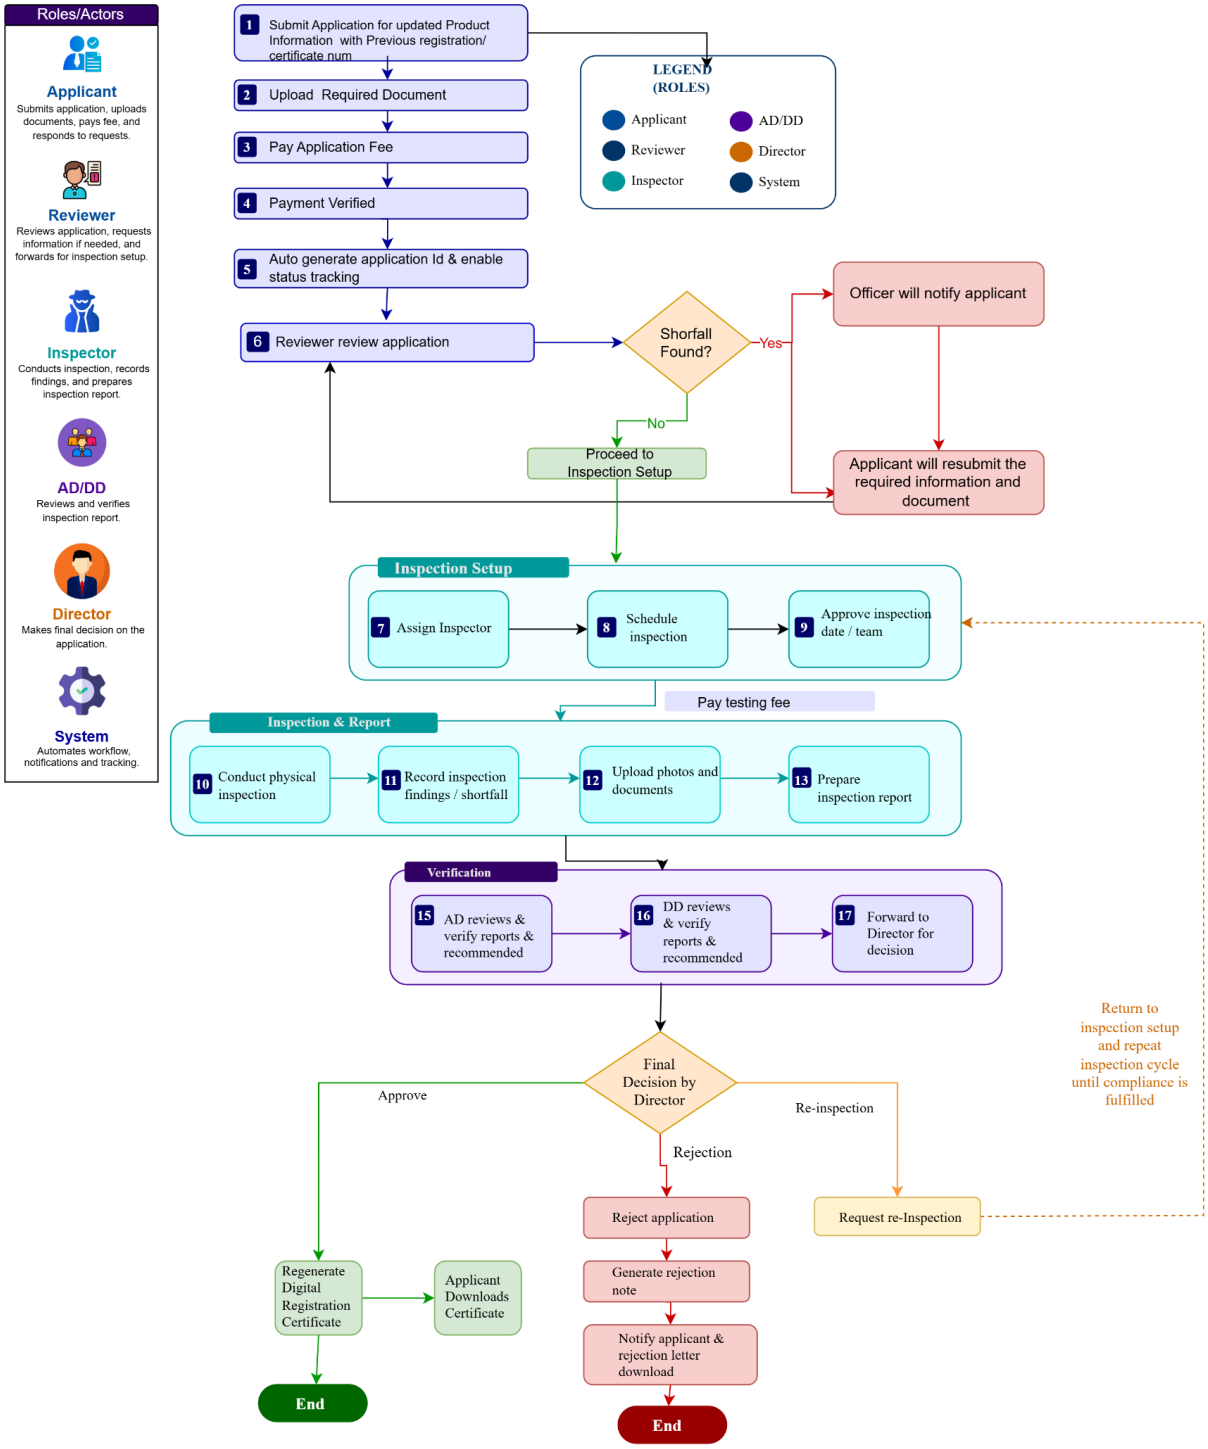

Figure Name: PCR Brand Inclusion Service Workflow

## Module-1: Application Submission (Total Feature - 3)

**Feature Description**

**1. Online Application Submission**

Allows applicants to submit applications electronically through the system by the certification or licence number. System will automatically fill up the general information and Factory Address information. Applicant will edit the product information like Add product, variant or Brand.

**2. Document Upload**

Enables applicants to upload all required supporting documents, such as licenses, certificates, identity documents, and other regulatory documents, in approved digital formats. The system verifies file type, size, and completeness before accepting uploads.

**3. Application Fee Payment**

Allows applicants to pay the required application fee through integrated online payment methods. The application is forwarded for review only after successful payment confirmation.

## Module-2: Application Review & Shortfall Management (Total Feature - 5)

**Feature Description**

**1. Application Review**

Enables designated reviewers to examine submitted applications and supporting documents to verify completeness, accuracy, and compliance with applicable registration requirements.

**2. Shortfall Identification**

Allows reviewers to identify missing documents, incorrect information, incomplete submissions, or regulatory non-compliance during the review process.

**3. Required Document Request**

Provides functionality to request additional documents, corrections, or clarifications from the applicant whenever deficiencies are identified.

**4. Shortfall Correction & Resubmission Loop**

Allows applicants to update application information, upload revised documents, and resubmit the application repeatedly until all identified shortfalls have been successfully addressed.

**5. Applicant Notification**

Automatically sends notifications to applicants regarding review outcomes, identified shortfalls, required corrective actions, and submission deadlines.

## Module-3: Payment Processing (Total Feature - 4)

**Feature Description**

**1. Fee Display**

Automatically calculates and displays the applicable registration fee based on the selected application category, product type, or registration service.

### 2. Payment Collection

Facilitates secure collection of registration fees through integrated online payment gateways while recording complete transaction details.

### 3. Payment Verification

Verifies successful payment transactions by communicating with the integrated payment gateway or banking system before allowing further application processing.

### 4. Automatic Status Update

Automatically updates the application status after successful payment verification, eliminating the need for manual intervention.

## Module-4: Inspection Setup (Total Feature - 3)

**Feature Description**

### 1. Inspector Assignment

Allows authorized officials to assign qualified inspectors based on predefined criteria such as expertise, workload, geographical location, or department.

### 2. Inspection Scheduling

Enables scheduling of inspection dates and times while considering inspector availability, applicant convenience, and organizational priorities.

### 3. Inspection Date/Team Setup & Approval

Allows management to finalize inspection schedules, assign inspection teams, and approve inspection plans before the inspection process begins.

## Module-5: Inspection & Report (Total Feature - 5)

**Feature Description**

### 1. Physical Inspection

Supports inspectors in conducting on-site inspections according to regulatory standards and approved inspection procedures.

### 2. Inspection Findings

Enables inspectors to record inspection observations, compliance status, identified deficiencies, and overall inspection results.

### 3. Report Preparation

Allows inspectors to prepare comprehensive digital inspection reports based on collected findings, observations, and compliance assessments.

### 4. Photo Upload

Enables inspectors to upload photographs and supporting visual evidence to strengthen inspection reports and document inspection findings.

### 5. Remarks Entry

Provides inspectors with the ability to record additional comments, recommendations, observations, or special notes relevant to the inspection.

## Module-6: Verification (AD/DD) (Total Feature - 3)

**Feature Description**

**1. Inspection Report Review**

Allows Assistant Directors (AD) and Deputy Directors (DD) to review submitted inspection reports for completeness, consistency, and regulatory compliance.

**2. Verification**

Enables authorized officers to verify inspection findings and confirm that all regulatory requirements have been fulfilled before forwarding the application for final approval.

**3. Comments & Feedback**

Allows reviewing officers to provide comments, recommendations, observations, or request clarification whenever additional information is required.

## Module-7: Approval Management (Total Feature - 3)

**Feature Description**

**1. Director Approval**

Allows the Director to review verified applications and grant final approval for registration after ensuring all regulatory requirements have been satisfied.

**2. Rejection**

Enables the Director to reject applications that fail to comply with regulatory requirements while recording the reasons for rejection.

**3. Re-Inspection Decision**

Allows the Director to request a re-inspection whenever additional verification or further inspection is considered necessary before making the final decision.

## Module-8: Registration Complete (Total Feature - 1)

**Feature Description**

**1. Registration Completion**

Finalizes the registration process by updating the application status to "Approved," completing all registration formalities, and preparing the application for certificate issuance.

## Module-9: Rejection Management (Total Feature - 2)

**Feature Description**

**1. Rejection Button Generation**

Provides authorized users with the functionality to formally reject an application through the system workflow while maintaining proper approval records.

**2. Applicant Notification**

Automatically informs applicants about the rejection decision along with the reasons for rejection and any applicable guidance for future applications.

## Module-10: Notification Management (Total Feature - 3)

**Feature Description**

**1. Email Notification**

Automatically sends email notifications to applicants and relevant officials regarding application progress, payment confirmation, inspections, approvals, rejections, and other workflow events.

**2. SMS Notification**

Sends SMS alerts for important application updates, reminders, inspection schedules, payment confirmations, and final decisions to ensure timely communication.

**3. Status Update Notification**

Automatically notifies applicants whenever the application status changes throughout the registration lifecycle, enabling real-time application tracking.

## Module-11: Re-Inspection Management (Total Feature - 3)

**Feature Description**

**1. Re-Inspection Request**

Allows authorized officials to initiate a re-inspection request when additional verification or corrective inspection is required.

**2. Return to Inspection Setup**

Automatically routes the application back to the Inspection Setup Module for scheduling and assigning a new inspection.

**3. Repeat Inspection Cycle**

Supports multiple inspection cycles until all identified deficiencies have been resolved and regulatory compliance has been achieved.

## Module-12: User & Role Management (Total Feature - 7)

**Features Description**

**1. Applicant**

Allows applicants to create accounts, submit applications, upload documents, make payments, monitor application status, and respond to shortfall requests.

**2. Reviewer**

Enables reviewing officers to examine submitted applications, identify deficiencies, request additional information, and forward applications for inspection.

**3. Inspector**

Allows inspectors to conduct field inspections, record inspection findings, upload supporting evidence, and submit inspection reports through the system.

**4. Assistant Director (AD)**

Provides Assistant Directors with authority to review inspection reports, verify compliance, provide recommendations, and forward applications for higher-level verification.

### 5. Deputy Director (DD)

Enables Deputy Directors to perform final verification, validate inspection outcomes, provide comments, and recommend approval, rejection, or re-inspection.

### 6. Director

Allows the Director to make the final decision by approving, rejecting, or requesting re-inspection of registration applications.

### 7. System Admin Role Management

Enables system administrators to create and manage user accounts, assign roles, configure permissions, manage access rights, reset passwords, and maintain overall system security.

## Module-13: Regional Office Workflow (Total Feature - 3)

### Features Description

### 1. Head Office Workflow

Supports centralized application processing and approval activities performed by the Head Office while maintaining standardized operational procedures.

### 2. Regional Office Workflow

Enables Regional Offices to receive, review, inspect, and process applications independently while following the organization's standardized workflow.

### 3. Wing Head-Centric Processing

Routes applications to the appropriate Wing Head based on jurisdiction or application category, allowing the Wing Head to supervise, review, and approve applications before final processing.

## Service-22: Registered Importer/Exporter Certificate Service

The **Registered Importer/Exporter Certificate Service** is a comprehensive digital solution designed to automate and manage the complete registration and certification process for importers and exporters. The system enables applicants to submit registration applications online, upload mandatory documents, complete registration fee payments, and monitor application progress through a centralized portal. Submitted applications undergo a structured multi-level review process involving the Director, Deputy Director (DD), Assistant Director (AD), and Inspectors to ensure regulatory compliance. If incomplete or incorrect information is identified, the system automatically manages shortfall notifications, applicant corrections, and application resubmissions without restarting the process.

The solution supports end-to-end inspection management, including inspection scheduling, inspector assignment, inspection execution, report preparation, verification, approval, and re-inspection when required. A role-based approval workflow ensures transparency and accountability throughout the certification process. Following successful inspection approval, the system generates payment requests, verifies payments, and automatically issues the Registered Importer/Exporter Certificate with a unique certificate number.

The platform also provides centralized document management, automated notifications, workflow tracking, audit trails, rejection management, and certificate repository services. Every action is securely recorded to ensure complete traceability and regulatory compliance. By replacing manual operations with a fully integrated digital workflow, the system improves processing efficiency, reduces paperwork, enhances service transparency, and delivers faster and more reliable certificate issuance.

## Service- 22: Registered Importer/Exporter Certificate Service

Detailed End-to-End Certification Workflow

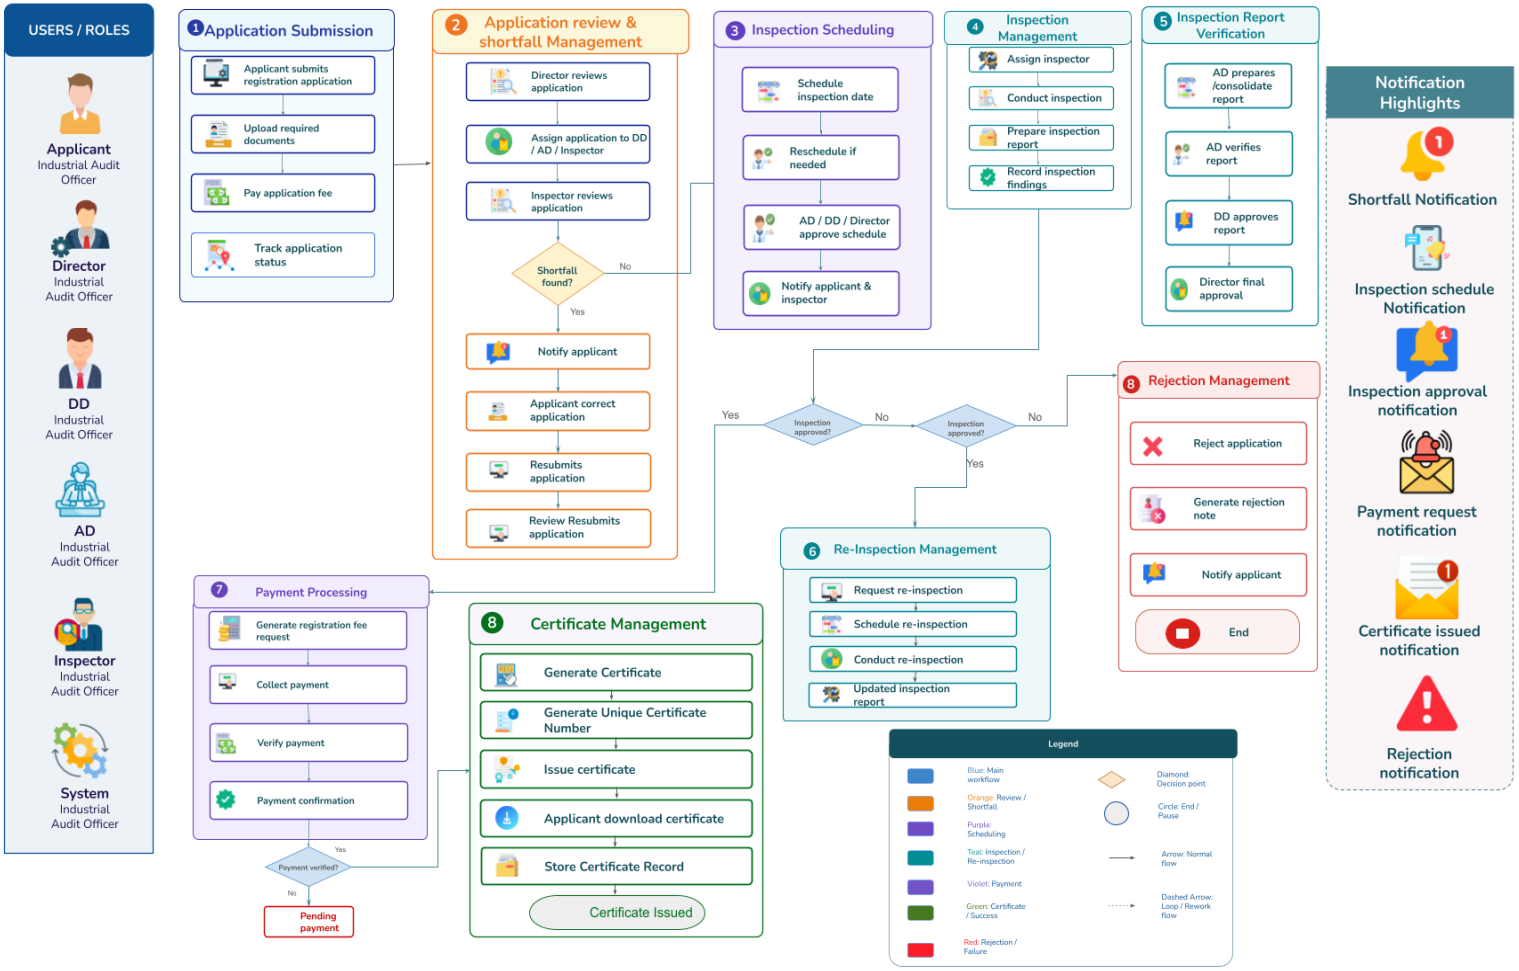

Figure Name: Registered Importer/Exporter Certificate Service Diagram

## Module-1. Application Submission (Total Feature - 4)

**Feature Description**

**1. Online Application Submission**

Allows applicants to submit importer/exporter registration applications electronically through the online portal.

**2. Required Document Upload**

Enables applicants to upload all mandatory supporting documents required for registration verification.

**3. Registration Fee Payment**

Allows applicants to pay the prescribed registration fee through the integrated payment system during application submission.

**4. Application Tracking**

Provides real-time tracking of application status from submission through certificate issuance.

## Module-2. Application Review & Shortfall Management (Total Feature - 6)

**Feature Description**

**1. Director Application Review**

Allows the Director to review submitted applications and determine whether they are ready for further processing.

**2. Application Forwarding (DD/AD)**

Enables the Director to forward applications to the Deputy Director or Assistant Director for detailed review.

**3. AD Application Review**

Allows the Assistant Director to examine application details, supporting documents, and compliance requirements.

**4. Shortfall Identification**

Identifies incomplete information, missing documents, or non-compliance that must be corrected.

**5. Shortfall Notification**

Automatically informs applicants about identified deficiencies and required corrections.

**6. Customer Resubmission**

Allows applicants to correct deficiencies and resubmit the application for continued processing.

## Module-3. Inspection Scheduling (Total Feature - 4)

**Feature Description**

**1. Inspection Date Scheduling**

Allows authorized officers to schedule inspection dates based on operational requirements.

**2. Inspection Date Rescheduling**

Enables modification of scheduled inspection dates when necessary.

**3. Multi-Level Inspection Date Approval (AD, DD, Director)**

Supports hierarchical approval of inspection schedules before confirmation.

**4. Inspection Schedule Notification**

Automatically notifies applicants and inspectors about confirmed inspection schedules.

## Module-4. Inspection Management (Total Feature - 4)

**Feature Description**

**1. Inspector Assignment**

Assigns qualified inspectors based on availability, workload, and expertise.

**2. Inspection Execution**

Allows inspectors to perform on-site inspections according to regulatory guidelines.

**3. Inspection Report Preparation**

Enables inspectors to prepare structured inspection reports after completing inspections.

**4. Inspection Findings Recording**

Records observations, compliance status, violations, and recommendations identified during inspections.

## Module-5. Inspection Report Verification (Total Feature - 4)

**Feature Description**

**1. AD Inspection Report Preparation**

Allows the Assistant Director to prepare or consolidate inspection reports based on submitted findings.

**2. AD Inspection Report Verification**

Enables the Assistant Director to verify report completeness, accuracy, and compliance.

**3. DD Inspection Report Approval**

Allows the Deputy Director to review verified inspection reports and provide managerial approval.

**4. Director Final Approval**

Enables the Director to provide final approval before certificate processing.

## Module-6. Re-inspection Management (Total Feature - 4)

**Feature Description**

**1. Re-inspection Request**

Allows authorized officers to request another inspection when compliance issues remain unresolved.

**2. Re-inspection Scheduling**

Schedules follow-up inspections after deficiencies have been addressed.

**3. Re-inspection Workflow**

Manages the approval, execution, and monitoring of repeat inspections.

**4. Updated Inspection Report**

Generates revised inspection reports reflecting the latest inspection results.

## Module-7. Payment Processing (Total Feature - 4)

**Feature Description**

**1. Registration Fee Request**

Automatically generates payment requests after successful completion of the approval process.

**2. Payment Collection**

Collects registration fees through integrated payment channels.

**3. Payment Verification**

Verifies successful payment transactions before certificate issuance.

**4. Payment Confirmation**

Confirms payment completion and authorizes certificate generation.

## Module-8. Certificate Management (Total Feature - 5)

**Feature Description**

**1. Certificate Generation**

Automatically generates the Registered Importer/Exporter Certificate after successful approval.

**2. Certificate Number Generation**

Assigns a unique certificate number for identification and traceability.

**3. Certificate Issuance**

Issues the approved certificate to the applicant.

**4. Certificate Download**

Allows applicants to securely download the issued certificate.

**5. Certificate Record Management**

Maintains a centralized repository of all issued certificates for future reference, renewal, and verification.

## Module-9. Rejection Management (Total Feature - 3)

**Feature Description**

**1. Rejection Decision**

Allows authorized officers to reject applications that fail to satisfy regulatory requirements.

**2. Reject Note Generation**

Automatically generates a formal rejection note explaining the reasons for rejection.

**3. Customer Notification**

Notifies applicants regarding application rejection through the notification system.

## Module-10. Notification (Total Feature - 6)

**Feature Description**

### 1. Shortfall Notification

Sends notifications whenever deficiencies are identified in the application.

### 2. Inspection Schedule Notification

Notifies applicants and inspectors about inspection schedules.

### 3. Inspection Approval Notification

Informs stakeholders after inspection reports receive final approval.

### 4. Payment Request Notification

Notifies applicants when payment is required before certificate issuance.

### 5. Certificate Issued Notification

Informs applicants immediately after certificate issuance.

### 6. Rejection Notification

Send rejection notifications together with the rejection reason.

## Module-11. Workflow & Task Management (Total Feature - 5)

**Feature Description**

### 1. Multi-Level Workflow

Controls the end-to-end application workflow across multiple approval levels.

### 2. Role-based Task Assignment

Assigns processing tasks according to predefined organizational roles.

### 3. Application Status Tracking

Tracks application progress throughout every stage of processing.

### 4. Workflow Remarks

Stores comments, observations, and recommendations recorded during application processing.

### 5. Audit Trail

Maintains a complete history of user activities, approvals, and workflow actions for accountability.

## Module-12. Document Management (Total Feature - 4)

**Feature Description**

### 1. Application Document Management

Stores and manages all application-related documents in a secure repository.

### 2. Inspection Report Management

Maintains inspection reports with version control and secure storage.

### 3. Certificate Repository

Provides centralized storage for all issued importer/exporter certificates.

### 4. Reject Note Management

Stores rejection notes and related documents for audit and future reference.

## Service-23: Registered Importer/Exporter Certificate Management Renewal

The **Registered Importer/Exporter Re-Certification Service** is a comprehensive digital solution designed to automate and manage the complete registration and certification process for importers and exporters. The system enables applicants to submit registration applications online, upload mandatory documents, complete registration fee payments, and monitor application progress through a centralized portal. Submitted applications undergo a structured multi-level review process involving the Director, Deputy Director (DD), Assistant Director (AD), and Inspectors to ensure regulatory compliance. If incomplete or incorrect information is identified, the system automatically manages shortfall notifications, applicant corrections, and application resubmissions without restarting the process.

The solution supports end-to-end inspection management, including inspection scheduling, inspector assignment, inspection execution, report preparation, verification, approval, and re-inspection when required. A role-based approval workflow ensures transparency and accountability throughout the certification process. Following successful inspection approval, the system generates payment requests, verifies payments, and automatically issues the Registered Importer/Exporter Certificate with a unique certificate number.

The platform also provides centralized document management, automated notifications, workflow tracking, audit trails, rejection management, and certificate repository services. Every action is securely recorded to ensure complete traceability and regulatory compliance. By replacing manual operations with a fully integrated digital workflow, the system improves processing efficiency, reduces paperwork, enhances service transparency, and delivers faster and more reliable certificate issuance.

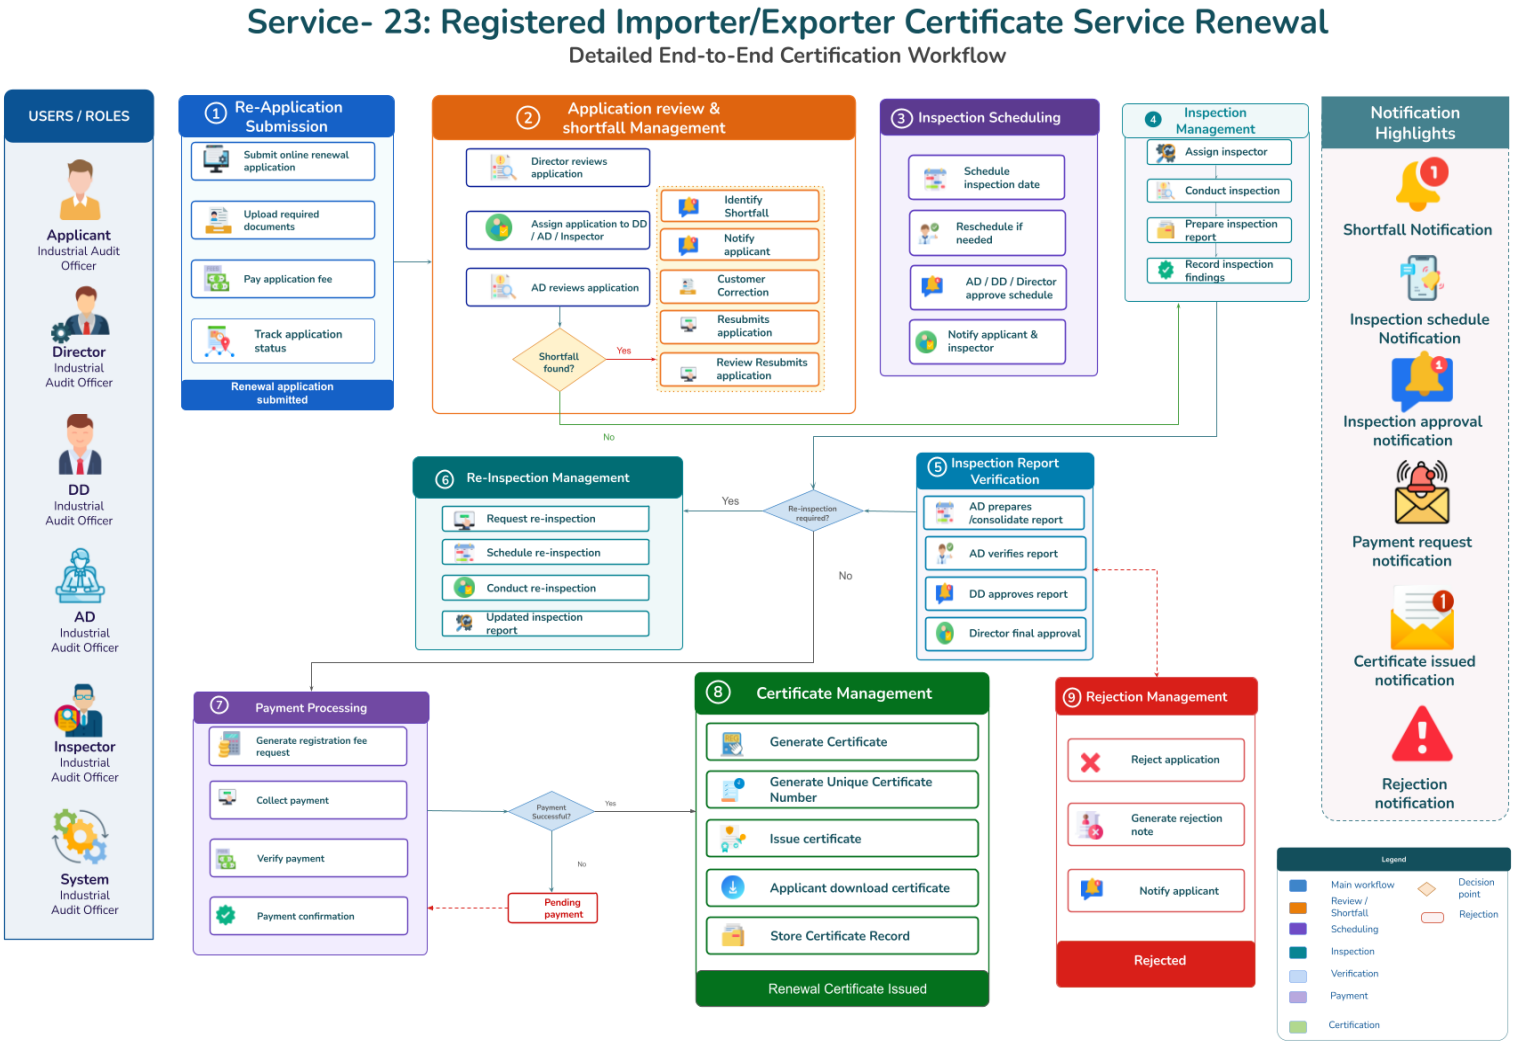

Fig: Workflow diagram of Registered Importer/Exporter Re-Certification Service

## Module- 1: Re-Application Submission (Total Feature - 6)

**Feature Description:**

**1. Online Application Submission**

Allows applicants to submit importer/exporter registration applications electronically through the online portal.

**2. Required Document Upload**

Enables applicants to upload all mandatory supporting documents required for registration verification.

**3. Registration Fee Payment**

Allows applicants to pay the prescribed registration fee through the integrated payment system during application submission.

**4. Application Tracking**

Provides real-time tracking of application status from submission through certificate issuance.

## Module- 2: Application Review & Shortfall Management (Total Feature - 6)

**Feature Description:**

**1. Director Application Review**

Allows the Director to review submitted applications and determine whether they are ready for further processing.

**2. Application Forwarding (DD/AD)**

Enables the Director to forward applications to the Deputy Director or Assistant Director for detailed review.

**3. AD Application Review**

Allows the Assistant Director to examine application details, supporting documents, and compliance requirements.

**4. Shortfall Identification**

Identifies incomplete information, missing documents, or non-compliance that must be corrected.

**5. Shortfall Notification**

Automatically informs applicants about identified deficiencies and required corrections.

**6. Customer Resubmission**

Allows applicants to correct deficiencies and resubmit the application for continued processing.

## Module- 3: Inspection Scheduling (Total Feature - 4)

**Feature Description:**

**1. Inspection Date Scheduling**

Allows authorized officers to schedule inspection dates based on operational requirements.

**2. Inspection Date Rescheduling**

Enables modification of scheduled inspection dates when necessary.

**3. Multi-Level Inspection Date Approval (AD, DD, Director)**

Supports hierarchical approval of inspection schedules before confirmation.

**4. Inspection Schedule Notification**

Automatically notifies applicants and inspectors about confirmed inspection schedules.

## Module- 4: Inspection Management (Total Feature - 4)

**Feature Description:**

**1. Inspector Assignment**

Assigns qualified inspectors based on availability, workload, and expertise.

**2. Inspection Execution**

Allows inspectors to perform on-site inspections according to regulatory guidelines.

**3. Inspection Report Preparation**

Enables inspectors to prepare structured inspection reports after completing inspections.

**4. Inspection Findings Recording**

Records observations, compliance status, violations, and recommendations identified during inspections.

## Module- 5: Inspection Report Verification (Total Feature - 4)

**Feature Description:**

**1. AD Inspection Report Preparation**

Allows the Assistant Director to prepare or consolidate inspection reports based on submitted findings.

**2. AD Inspection Report Verification**

Enables the Assistant Director to verify report completeness, accuracy, and compliance.

**3. DD Inspection Report Approval**

Allows the Deputy Director to review verified inspection reports and provide managerial approval.

**4. Director Final Approval**

Enables the Director to provide final approval before certificate processing.

## Module- 6: Re-inspection Management (Total Feature - 4)

**Feature Description:**

**1. Re-inspection Request**

Allows authorized officers to request another inspection when compliance issues remain unresolved.

**2. Re-inspection Scheduling**

Schedules follow-up inspections after deficiencies have been addressed.

**3. Re-inspection Workflow**

Manages the approval, execution, and monitoring of repeat inspections.

**4. Updated Inspection Report**

Generates revised inspection reports reflecting the latest inspection results.

## Module- 7: Payment Processing (Total Feature - 4)

**Feature Description:**

**1. Registration Fee Request**

Automatically generates payment requests after successful completion of the approval process.

**2. Payment Collection**

Collects registration fees through integrated payment channels.

**3. Payment Verification**

Verifies successful payment transactions before certificate issuance.

**4. Payment Confirmation**

Confirms payment completion and authorizes certificate generation.

## Module- 8: Certificate Management (Total Feature - 5)

**Feature Description:**

**1. Certificate Generation**

Automatically generates the Registered Importer/Exporter Certificate after successful approval.

**2. Certificate Number Generation**

Assigns a unique certificate number for identification and traceability.

**3. Certificate Issuance**

Issues the approved certificate to the applicant.

**4. Certificate Download**

Allows applicants to securely download the issued certificate.

**5. Certificate Record Management**

Maintains a centralized repository of all issued certificates for future reference, renewal, and verification.

## Module- 9: Rejection Management (Total Feature - 3)

**Feature Description:**

**1. Rejection Decision**

Allows authorized officers to reject applications that fail to satisfy regulatory requirements.

**2. Reject Note Generation**

Automatically generates a formal rejection note explaining the reasons for rejection.

**3. Customer Notification**

Notifies applicants regarding application rejection through the notification system.

## Module- 10: Notification Management (Total Feature - 6)

**Feature Description:**

### 1. Shortfall Notification

Sends notifications whenever deficiencies are identified in the application.

### 2. Inspection Schedule Notification

Notifies applicants and inspectors about inspection schedules.

### 3. Inspection Approval Notification

Informs stakeholders after inspection reports receive final approval.

### 4. Payment Request Notification

Notifies applicants when payment is required before certificate issuance.

### 5. Certificate Issued Notification

Informs applicants immediately after certificate issuance.

### 6. Rejection Notification

Send rejection notifications together with the rejection reason.

## Module- 11: Workflow & Task Management (Total Feature - 5)

**Feature Description:**

### 1. Multi-Level Workflow

Controls the end-to-end application workflow across multiple approval levels.

### 2. Role-based Task Assignment

Assigns processing tasks according to predefined organizational roles.

### 3. Application Status Tracking

Tracks application progress throughout every stage of processing.

### 4. Workflow Remarks

Stores comments, observations, and recommendations recorded during application processing.

### 5. Audit Trail

Maintains a complete history of user activities, approvals, and workflow actions for accountability.

## Module- 12. Document Management (Total Feature - 4)

**Feature Description:**

### 1. Application Document Management

Stores and manages all application-related documents in a secure repository.

### 2. Inspection Report Management

Maintains inspection reports with version control and secure storage.

### 3. Certificate Repository

Provides centralized storage for all issued importer/exporter certificates.

### 4. Reject Note Management

Stores rejection notes and related documents for audit and future reference.

## Service-24: Metrology License Issue

The **Metrology License Registration New System** is a centralized, workflow-driven digital solution that automates the complete licensing process from application submission to license issuance. The system enables applicants to submit category-wise applications online, upload required documents, and monitor application progress in real time. Every application passes through a structured multi-level review process involving Directors, Deputy Directors (DD), Assistant Directors (AD), and Inspectors. During the review stage, incomplete applications are managed through an automated shortfall process that allows applicants to correct deficiencies and resubmit documents without restarting the workflow.

The solution includes comprehensive inspection management, where inspections are scheduled, approved, executed, verified, and, if necessary, repeated through a re-inspection workflow. Role-based approvals ensure transparency and accountability at every stage. Once inspection activities are successfully completed, the system generates payment requests based on the application category and verifies payment before proceeding to license issuance.

The platform also supports automated notifications, centralized document management, workflow tracking, audit trails, and rejection management for unsuccessful applications. Every activity is recorded to ensure complete traceability and regulatory compliance. By digitizing manual processes, reducing paperwork, and providing end-to-end workflow automation, the system improves operational efficiency, enhances transparency, minimizes processing time, and delivers a secure and paperless licensing management environment.

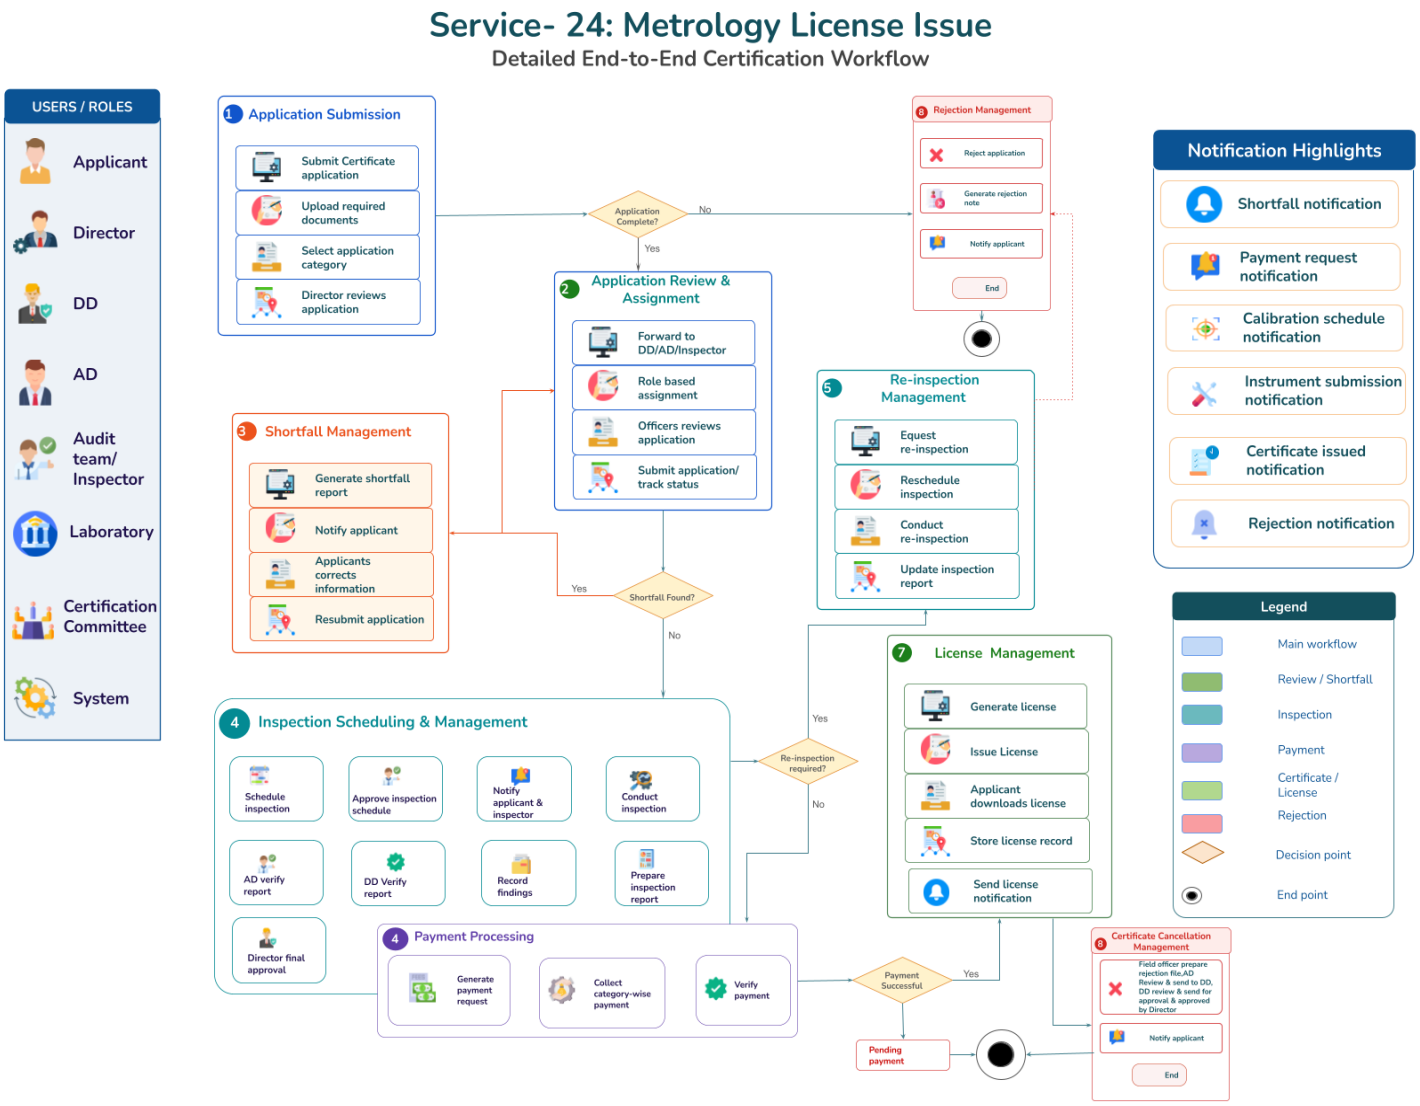

Fig: Metrology License New Service Workflow

## Module-1. Application Submission (Total Feature - 4)

**Feature Description**

**1. Online Application Submission**

Allows applicants to submit license applications electronically through a web portal, eliminating manual paperwork while ensuring standardized application submission.

**2. Required Document Upload**

Enables applicants to upload all mandatory supporting documents such as certificates, identification documents, reports, and declarations required for application processing.

**3. Category Wise Application Submission**

Allows applicants to select the appropriate license category or service type so that the application follows the correct workflow, requirements, and fee structure.

**4. Application Tracking**

Provides real-time tracking of application progress, allowing applicants to monitor the current processing stage, assigned officer, pending actions, and final status.

## Module-2. Application Review & Assignment (Total Feature - 4)

**Feature Description**

**1. Director Application Review**

Allows the Director to review newly submitted applications, verify completeness, and decide whether they are ready for further processing.

**2. Application Forwarding (DD/AD/Inspector)**

Enables the Director to forward reviewed applications to the appropriate Deputy Director, Assistant Director, or Inspector for subsequent processing.

**3. Role-based Assignment**

Automatically or manually assigns applications to officers according to predefined roles, responsibilities, workload, or organizational hierarchy.

**4. Workflow Remarks**

Allows reviewing officers to record comments, recommendations, observations, or processing notes throughout the application lifecycle.

## Module-3. Shortfall Management (Total Feature - 5)

**Feature Description**

**1. Application Review**

Allows assigned officers to review submitted information and verify compliance with licensing requirements.

**2. Shortfall Identification**

Identifies missing documents, incorrect information, or compliance gaps that must be corrected before further processing.

### 3. Shortfall Notification

Automatically notifies applicants about identified deficiencies with detailed correction instructions.

### 4. Customer Correction

Allows applicants to update application information and upload corrected documents based on the received shortfall notice.

### 5. Application Resubmission

Enables applicants to resubmit corrected applications, returning them to the review workflow without creating a new application.

## Module-4. Inspection Scheduling (Total Feature - 4)

**Feature Description**

### 1. Inspection Date Scheduling

Allows authorized officers to schedule inspection dates according to inspector availability and application requirements.

### 2. Inspection Date Rescheduling

Enables modification of scheduled inspection dates due to operational requirements or applicant requests.

### 3. Multi-Level Inspection Date Approval (AD, DD, Director)

Supports hierarchical approval of inspection schedules before confirmation.

### 4. Inspection Notification

Automatically informs applicants and inspectors about confirmed inspection schedules through system notifications.

## Module-5. Inspection Management (Total Feature - 3)

**Feature Description**

### 1. Inspection Execution

Allows inspectors to conduct field inspections according to approved schedules and regulatory guidelines.

### 2. Inspection Report Preparation

Enables inspectors to prepare structured inspection reports based on inspection findings.

### 3. Inspection Findings Recording

Records inspection observations, compliance status, violations, recommendations, and supporting evidence.

## Module-6. Inspection Verification & Approval (Total Feature - 4)

**Feature Description**

### 1. AD Report Verification

Allows the Assistant Director to verify the completeness and accuracy of inspection reports.

### 2. DD Report Approval

Enables the Deputy Director to review verified inspection reports and provide managerial approval.

### 3. Director Final Approval

Allows the Director to perform the final review and authorize inspection completion.

### 4. Workflow Tracking

Maintains complete tracking of report movement, approvals, pending actions, and processing history.

## Module-7. Re-inspection Management (Total Feature - 4)

**Feature Description**

### 1. Re-inspection Request

Allows authorized officers to request another inspection when deficiencies remain unresolved.

### 2. Re-scheduling Inspection

Schedules a new inspection date for follow-up verification.

### 3. Re-inspection Workflow

Manages the complete approval and execution process for repeat inspections.

### 4. Updated Inspection Report

Generates revised inspection reports reflecting the latest inspection findings.

## Module-8. Payment Processing (Total Feature - 4)

**Feature Description**

### 1. License Payment Request

Automatically generates payment requests after successful completion of all approval stages.

### 2. Application Category Wise Payment Collection

Calculates and collects fees based on the selected license category or service type.

### 3. Payment Verification

Verifies payment transactions received from the integrated payment gateway or banking system.

### 4. Payment Confirmation

Confirms successful payment and activates the next stage of license generation.

## Module-9. License Management (Total Feature - 4)

**Feature Description**

### 1. License Generation

Automatically generates the official license after successful approval and payment verification.

### 2. License Issuance

Issues the approved license to the applicant through the system.

### 3. License Download

Allows applicants to securely download the issued digital license.

### 4. License Record Management

Maintains a centralized repository of all issued licenses for future verification, renewal, and reporting.

## Module-10. Rejection Management (Total Feature - 3)

**Feature Description**

### 1. Rejection Decision

Allows authorized officials to reject applications that fail to satisfy regulatory requirements.

### 2. Rejection Letter Generation

Automatically generates formal rejection letters with reasons for rejection.

### 3. Customer Notification

Notifies applicants about application rejection through the notification system.

## Module-11. Notification (Total Feature - 6)

**Feature Description**

### 1. Shortfall Notification

Notifies applicants whenever application deficiencies are identified.

### 2. Inspection Schedule Notification

Sends inspection schedule information to applicants and inspectors.

### 3. Inspection Approval Notification

Notifies stakeholders when inspection approvals are completed.

### 4. Payment Request Notification

Informs applicants that payment is required before license issuance.

### 5. License Issued Notification

Notifies applicants immediately after successful license issuance.

### 6. Rejection Notification

Send rejection notifications along with the rejection reason.

## Module-12. Workflow & Task Management (Total Feature - 5)

**Feature Description**

### 1. Multi-Level Workflow

Controls the complete application workflow across multiple approval levels.

### 2. Role-based Task Assignment

Assigns processing tasks automatically based on organizational roles and responsibilities.

### 3. Application Status Tracking

Tracks application progress from submission through final completion.

### 4. Workflow Remarks

Stores comments and observations recorded during each workflow stage.

### 5. Audit Trail

Maintains complete logs of every action, approval, modification, and workflow activity for accountability.

## Module-13. Document Management (Total Feature - 4)

**Feature Description**

### 1. Application Document Management

Stores, organizes, and manages all documents submitted with license applications.

### 2. Inspection Report Management

Maintains inspection reports with version control and secure storage.

### 3. License Document Repository

Provides a centralized repository for all issued license documents.

### 4. Rejection Letter Storage

Stores generated rejection letters for future reference and audit purposes.

## Service-25: Metrology License Renewal Registration

The **Metrology License Registration New System** is a centralized, workflow-driven digital solution that automates the complete licensing process from application submission to license issuance. The system enables applicants to submit category-wise applications online, upload required documents, and monitor application progress in real time. Every application passes through a structured multi-level review process involving Directors, Deputy Directors (DD), Assistant Directors (AD), and Inspectors. During the review stage, incomplete applications are managed through an automated shortfall process that allows applicants to correct deficiencies and resubmit documents without restarting the workflow.

The solution includes comprehensive inspection management, where inspections are scheduled, approved, executed, verified, and, if necessary, repeated through a re-inspection workflow. Role-based approvals ensure transparency and accountability at every stage. Once inspection activities are successfully completed, the system generates payment requests based on the application category and verifies payment before proceeding to license issuance.

The platform also supports automated notifications, centralized document management, workflow tracking, audit trails, and rejection management for unsuccessful applications. Every activity is recorded to ensure complete traceability and regulatory compliance. By digitizing manual processes, reducing paperwork, and providing end-to-end workflow automation, the system improves operational efficiency, enhances transparency, minimizes processing time, and delivers a secure and paperless licensing management environment.

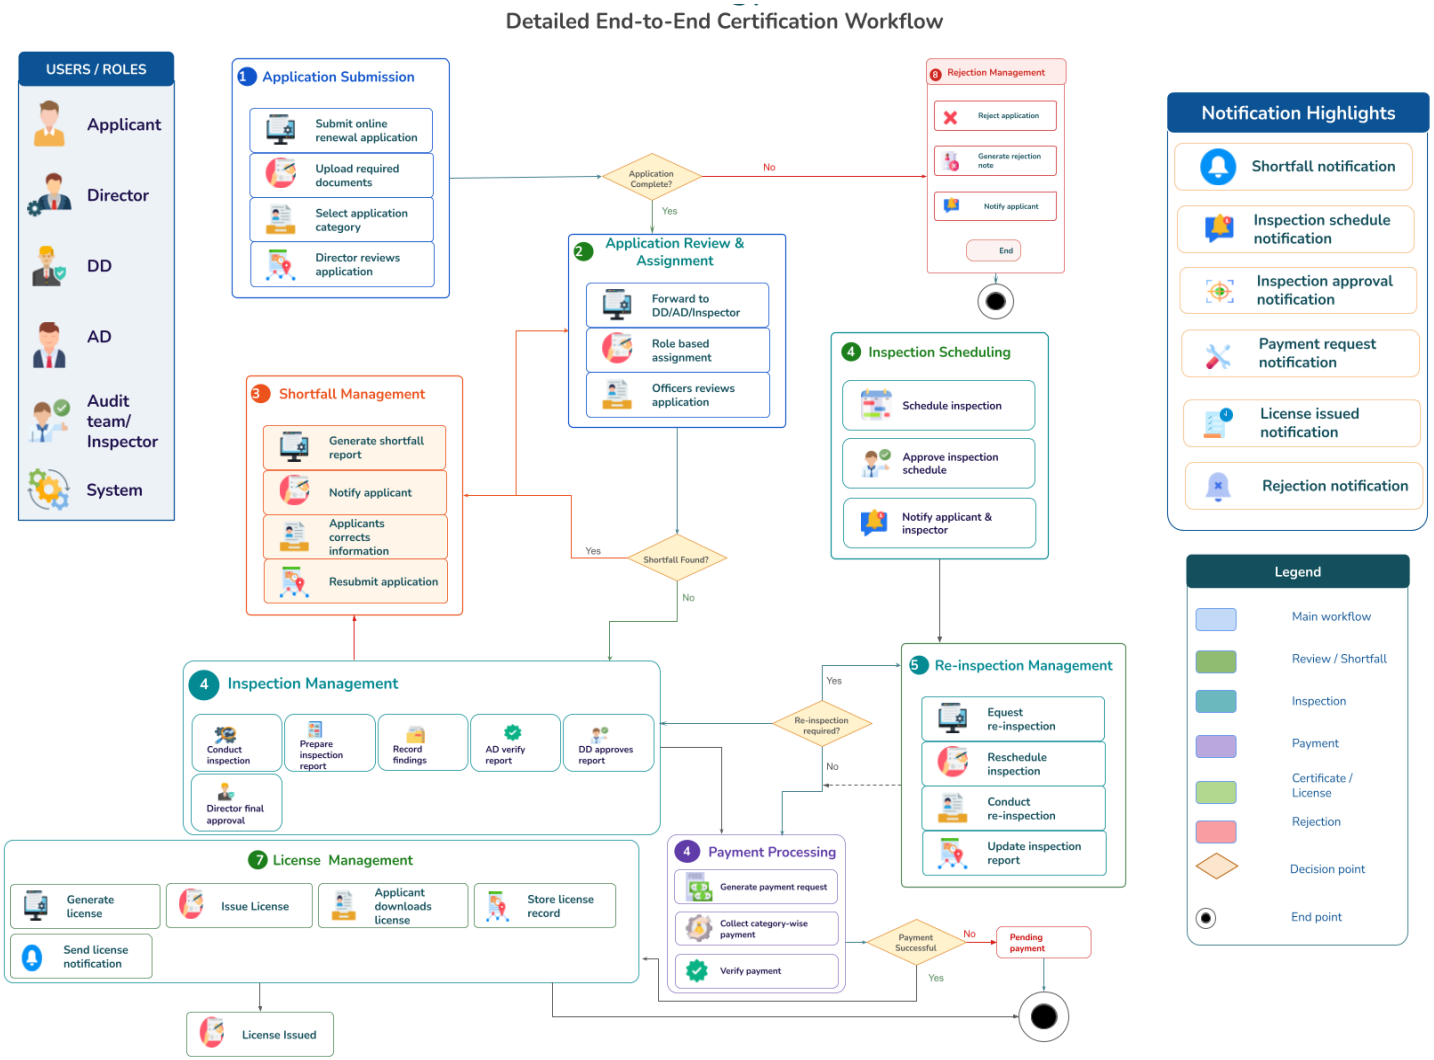

Fig: Workflow diagram of Metrology Re-New Registration

## Module-1. Application Submission (Total Feature - 4)

**Feature Description**

**1. Online Re-Application Submission**

Allows applicants to submit license re-applications electronically through a web portal, eliminating manual paperwork while ensuring standardized application submission.

**2. Required Document Upload**

Enables applicants to upload all mandatory supporting documents such as certificates, identification documents, reports, and declarations required for application processing.

**3. Category Wise Application Submission**

Allows applicants to select the appropriate license category or service type so that the application follows the correct workflow, requirements, and fee structure.

**4. Application Tracking**

Provides real-time tracking of application progress, allowing applicants to monitor the current processing stage, assigned officer, pending actions, and final status.

## Module-2. Application Review & Assignment (Total Feature - 4)

**Feature Description**

**1. Director Application Review**

Allows the Director to review newly submitted applications, verify completeness, and decide whether they are ready for further processing.

**2. Application Forwarding (DD/AD/Inspector)**

Enables the Director to forward reviewed applications to the appropriate Deputy Director, Assistant Director, or Inspector for subsequent processing.

**3. Role-based Assignment**

Automatically or manually assigns applications to officers according to predefined roles, responsibilities, workload, or organizational hierarchy.

**4. Workflow Remarks**

Allows reviewing officers to record comments, recommendations, observations, or processing notes throughout the application lifecycle.

## Module-3. Shortfall Management (Total Feature - 5)

**Feature Description**

**1. Application Review**

Allows assigned officers to review submitted information and verify compliance with licensing requirements.

**2. Shortfall Identification**

Identifies missing documents, incorrect information, or compliance gaps that must be corrected before further processing.

### 3. Shortfall Notification

Automatically notifies applicants about identified deficiencies with detailed correction instructions.

### 4. Customer Correction

Allows applicants to update application information and upload corrected documents based on the received shortfall notice.

### 5. Application Resubmission

Enables applicants to resubmit corrected applications, returning them to the review workflow without creating a new application.

## Module-4. Inspection Scheduling (Total Feature - 4)

**Feature Description**

### 1. Inspection Date Scheduling

Allows authorized officers to schedule inspection dates according to inspector availability and application requirements.

### 2. Inspection Date Rescheduling

Enables modification of scheduled inspection dates due to operational requirements or applicant requests.

### 3. Multi-Level Inspection Date Approval (AD, DD, Director)

Supports hierarchical approval of inspection schedules before confirmation.

### 4. Inspection Notification

Automatically informs applicants and inspectors about confirmed inspection schedules through system notifications.

## Module-5. Inspection Management (Total Feature - 3)

**Feature Description**

### 1. Inspection Execution

Allows inspectors to conduct field inspections according to approved schedules and regulatory guidelines.

### 2. Inspection Report Preparation

Enables inspectors to prepare structured inspection reports based on inspection findings.

### 3. Inspection Findings Recording

Records inspection observations, compliance status, violations, recommendations, and supporting evidence.

## Module-6. Inspection Verification & Approval (Total Feature - 4)

**Feature Description**

### 1. AD Report Verification

Allows the Assistant Director to verify the completeness and accuracy of inspection reports.

### 2. DD Report Approval

Enables the Deputy Director to review verified inspection reports and provide managerial approval.

### 3. Director Final Approval

Allows the Director to perform the final review and authorize inspection completion.

### 4. Workflow Tracking

Maintains complete tracking of report movement, approvals, pending actions, and processing history.

## Module-7. Re-inspection Management (Total Feature - 4)

**Feature Description**

### 1. Re-inspection Request

Allows authorized officers to request another inspection when deficiencies remain unresolved.

### 2. Re-scheduling Inspection

Schedules a new inspection date for follow-up verification.

### 3. Re-inspection Workflow

Manages the complete approval and execution process for repeat inspections.

### 4. Updated Inspection Report

Generates revised inspection reports reflecting the latest inspection findings.

## Module-8. Payment Processing (Total Feature - 4)

**Feature Description**

### 1. License Payment Request

Automatically generates payment requests after successful completion of all approval stages.

### 2. Application Category Wise Payment Collection

Calculates and collects fees based on the selected license category or service type.

### 3. Payment Verification

Verifies payment transactions received from the integrated payment gateway or banking system.

### 4. Payment Confirmation

Confirms successful payment and activates the next stage of license generation.

## Module-9. License Management (Total Feature - 4)

**Feature Description**

### 1. License Generation

Automatically generates the official license after successful approval and payment verification.

### 2. License Issuance

Issues the approved license to the applicant through the system.

### 3. License Download

Allows applicants to securely download the issued digital license.

### 4. License Record Management

Maintains a centralized repository of all issued licenses for future verification, renewal, and reporting.

## Module-10. Rejection Management (Total Feature - 3)

**Feature Description**

### 1. Rejection Decision

Allows authorized officials to reject applications that fail to satisfy regulatory requirements.

### 2. Rejection Letter Generation

Automatically generates formal rejection letters with reasons for rejection.

### 3. Customer Notification

Notifies applicants about application rejection through the notification system.

## Module-11. Notification (Total Feature - 6)

**Feature Description**

### 1. Shortfall Notification

Notifies applicants whenever application deficiencies are identified.

### 2. Inspection Schedule Notification

Sends inspection schedule information to applicants and inspectors.

### 3. Inspection Approval Notification

Notifies stakeholders when inspection approvals are completed.

### 4. Payment Request Notification

Informs applicants that payment is required before license issuance.

### 5. License Issued Notification

Notifies applicants immediately after successful license issuance.

### 6. Rejection Notification

Send rejection notifications along with the rejection reason.

## Module-12. Workflow & Task Management (Total Feature - 5)

**Feature Description**

### 1. Multi-Level Workflow

Controls the complete application workflow across multiple approval levels.

### 2. Role-based Task Assignment

Assigns processing tasks automatically based on organizational roles and responsibilities.

### 3. Application Status Tracking

Tracks application progress from submission through final completion.

### 4. Workflow Remarks

Stores comments and observations recorded during each workflow stage.

### 5. Audit Trail

Maintains complete logs of every action, approval, modification, and workflow activity for accountability.

## Module-13. Document Management (Total Feature - 4)

**Feature Description**

### 1. Application Document Management

Stores, organizes, and manages all documents submitted with license applications.

### 2. Inspection Report Management

Maintains inspection reports with version control and secure storage.

### 3. License Document Repository

Provides a centralized repository for all issued license documents.

### 4. Rejection Letter Storage

Stores generated rejection letters for future reference and audit purposes.

## Service-26: Tank Lorry Calibration

The **Tank Lorry Calibration Service** is a comprehensive digital solution designed to automate the calibration, verification, approval, and license issuance process for tank lorries. The system allows applicants to submit calibration applications online, upload required documents, pay applicable fees, and monitor application status throughout the process. Applications are reviewed through a role-based workflow where authorized officials verify submissions, assign responsibilities, and identify deficiencies requiring correction. The platform supports calibration scheduling, rescheduling, multi-level schedule approval, calibration execution, and digital calibration report preparation. Calibration reports undergo verification and final approval before licenses are issued. If calibration results do not meet regulatory requirements, the system manages re-inspection or re-calibration requests, scheduling, and updated calibration reports. License fees are determined based on changes in product volume, and approved applicants can download their licenses online. The solution also provides automated notifications, workflow tracking, audit trails, and centralized document management to ensure transparency, operational efficiency, regulatory compliance, and accurate calibration record management.

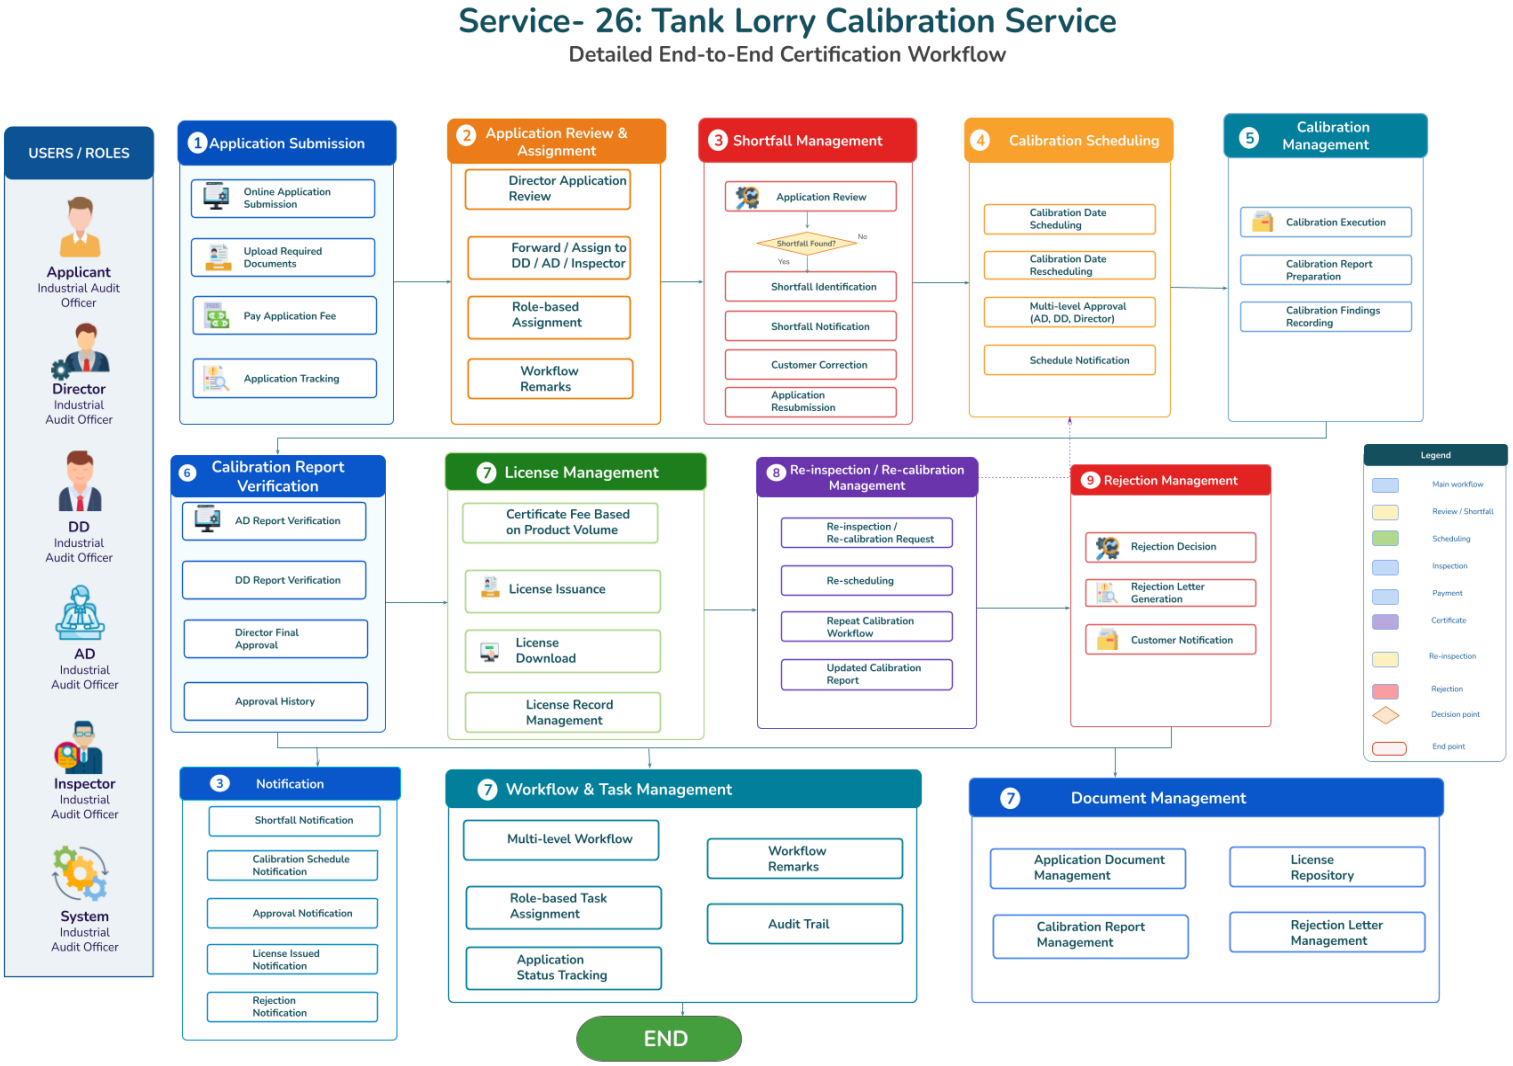

Fig: Workflow diagram of Tank Lorry Calibration Service

## Module-1. Application Submission (Total Feature - 4)

**Feature Description:**

**1. Online Application Submission**

Enables applicants to submit tank lorry calibration applications through the online portal.

**2. Required Document Upload**

Allows applicants to upload all mandatory documents required for calibration.

**3. Application Fee Payment**

Facilitates payment of the prescribed calibration application fee.

**4. Application Tracking**

Enables applicants to monitor the progress and current status of their submitted applications.

## Module- 2: Application Review & Assignment (Total Feature - 4)

**Feature Description:**

**1. Director Application Review**

Allows the Director to conduct the initial review of submitted applications.

**2. Application Forwarding/Assignment (DD/AD/Inspector)**

Forwards applications to the appropriate officials for detailed processing.

**3. Role-based Assignment**

Assigns tasks according to user roles and responsibilities.

**4. Workflow Remarks**

Allows officials to record comments and observations throughout the review process.

## Module- 3: Shortfall Management (Total Feature - 5)

**Feature Description:**

**1. Application Review**

Reviews submitted applications for completeness and compliance.

**2. Shortfall Identification**

Identifies missing documents, incorrect information, or application deficiencies.

**3. Shortfall Notification**

Automatically informs applicants about identified shortfalls.

**4. Customer Correction**

Allows applicants to correct deficiencies and provide additional information.

**5. Application Resubmission**

Enables applicants to resubmit corrected applications for further review.

## Module- 4: Calibration Scheduling (Total Feature - 4)

**Feature Description:**

**1. Calibration Date Scheduling**

Schedules calibration appointments based on operational requirements.

**2. Calibration Date Rescheduling**

Allows authorized officials to modify calibration schedules when necessary.

**3. Multi-Level Calibration Date Approval (AD, DD, Director)**

Supports hierarchical approval before confirming calibration dates.

**4. Calibration Schedule Notification**

Sends automated notifications regarding scheduled calibration dates.

## Module- 5: Calibration Management (Total Feature - 3)

**Feature Description:**

**1. Calibration Execution**

Enables inspectors to perform calibration activities according to regulatory standards.

**2. Calibration Report Preparation**

Allows inspectors to prepare detailed digital calibration reports.

**3. Calibration Findings Recording**

Records calibration measurements, observations, and compliance results.

## Module- 6: Calibration Report Verification (Total Feature - 4)

**Feature Description:**

**1. AD Report Verification**

Enables the Assistant Director to verify submitted calibration reports.

**2. DD Report Verification**

Allows the Deputy Director to review and verify calibration reports.

**3. Director Final Approval**

Supports the Director in providing final approval for calibration results.

**4. Approval History**

Maintains a complete history of all verification and approval activities.

## Module- 7: License Management (Total Feature - 4)

**Feature Description:**

**1. Certificate Fee Based on Product Volume**

Calculates license fees based on increases or decreases in product volume.

**2. License Issuance**

Issues the calibration license after successful approval.

**3. License Download**

Allows applicants to download the approved license online.

**4. License Record Management**

Maintains a centralized repository of issued calibration licenses.

## Module- 8: Re-inspection / Re-calibration Management (Total Feature - 4)

**Feature Description:**

**1. Re-inspection / Re-calibration Request**

Initiates repeat calibration when corrective action is required.

**2. Re-scheduling**

Schedules follow-up calibration appointments.

**3. Repeat Calibration Workflow**

Manages the complete workflow for repeat calibration activities.

**4. Updated Calibration Report**

Generates revised calibration reports after re-calibration.

## Module- 9: Rejection Management (Total Feature - 3)

**Feature Description:**

**1. Rejection Decision**

Records the final decision to reject an application.

**2. Rejection Letter Generation**

Generates an official rejection letter stating the reasons for rejection.

**3. Customer Notification**

Notifies applicants regarding the rejection decision.

## Module- 10: Notification (Total Feature - 5)

**Feature Description:**

**1. Shortfall Notification**

Alerts applicants regarding missing information or required corrections.

**2. Calibration Schedule Notification**

Sends notifications about scheduled calibration dates.

**3. Approval Notification**

Notifies applicants after calibration approval decisions.

**4. License Issued Notification**

Informs applicants when their calibration license has been issued.

**5. Rejection Notification**

Sends notifications regarding application rejection.

## Module- 11: Workflow & Task Management (Total Feature - 5)

**Feature Description:**

**1. Multi-Level Workflow**

Supports sequential processing through multiple approval authorities.

**2. Role-based Task Assignment**

Assigns workflow tasks based on user roles and responsibilities.

**3. Application Status Tracking**

Tracks application progress throughout the calibration lifecycle.

**4. Workflow Remarks**

Allows officials to record comments and workflow decisions.

### 5. Audit Trail

Maintains a complete history of all workflow activities for transparency and accountability.

## Module- 12: Document Management (Total Feature - 4)

**Feature Description:**

### 1. Application Document Management

Securely stores and manages all submitted application documents.

### 2. Calibration Report Management

Maintains digital calibration reports and related records.

### 3. License Repository

Provides centralized storage for all issued calibration licenses.

### 4. Rejection Letter Management

Stores rejection letters and related documents for future reference.

## Service-27: LPG Bottling Plant / LPG Filling Station / Fuel Filling Station Registration Service

The **LPG Bottling Plant, LPG Filling Station, and Fuel Filling Station Registration Service** is a complete digital solution that automates the registration, inspection, approval, and certification process for fuel-related establishments. The system enables applicants to submit registration applications online, upload required documents, make registration fee payments, and track application status throughout the process. Applications are reviewed by designated officers through a role-based workflow where deficiencies can be identified, communicated to applicants, and corrected through resubmission.

The solution supports comprehensive inspection management, including inspection scheduling, rescheduling, inspector assignment, field inspection, report preparation, and multi-level approval of inspection reports. Where corrective actions are required, the system facilitates re-inspection requests, scheduling, and updated inspection reporting. Category-wise registration fees are processed through an integrated payment management system with payment verification and confirmation. After successful approval, the system automatically generates registration numbers and registration certificates, allowing applicants to download their approved registration papers online. Applications that fail to meet regulatory requirements are processed through a structured rejection workflow with documented reasons and automated notifications. The solution also provides document management, workflow monitoring, audit trails, role-based task assignment, and automated notifications to ensure transparency, efficiency, accountability, and compliance with regulatory standards.

## Service- 27: LPG Bottling Plant / LPG Filling station / Fuel Filling Station

Detailed End-to-End Certification Workflow

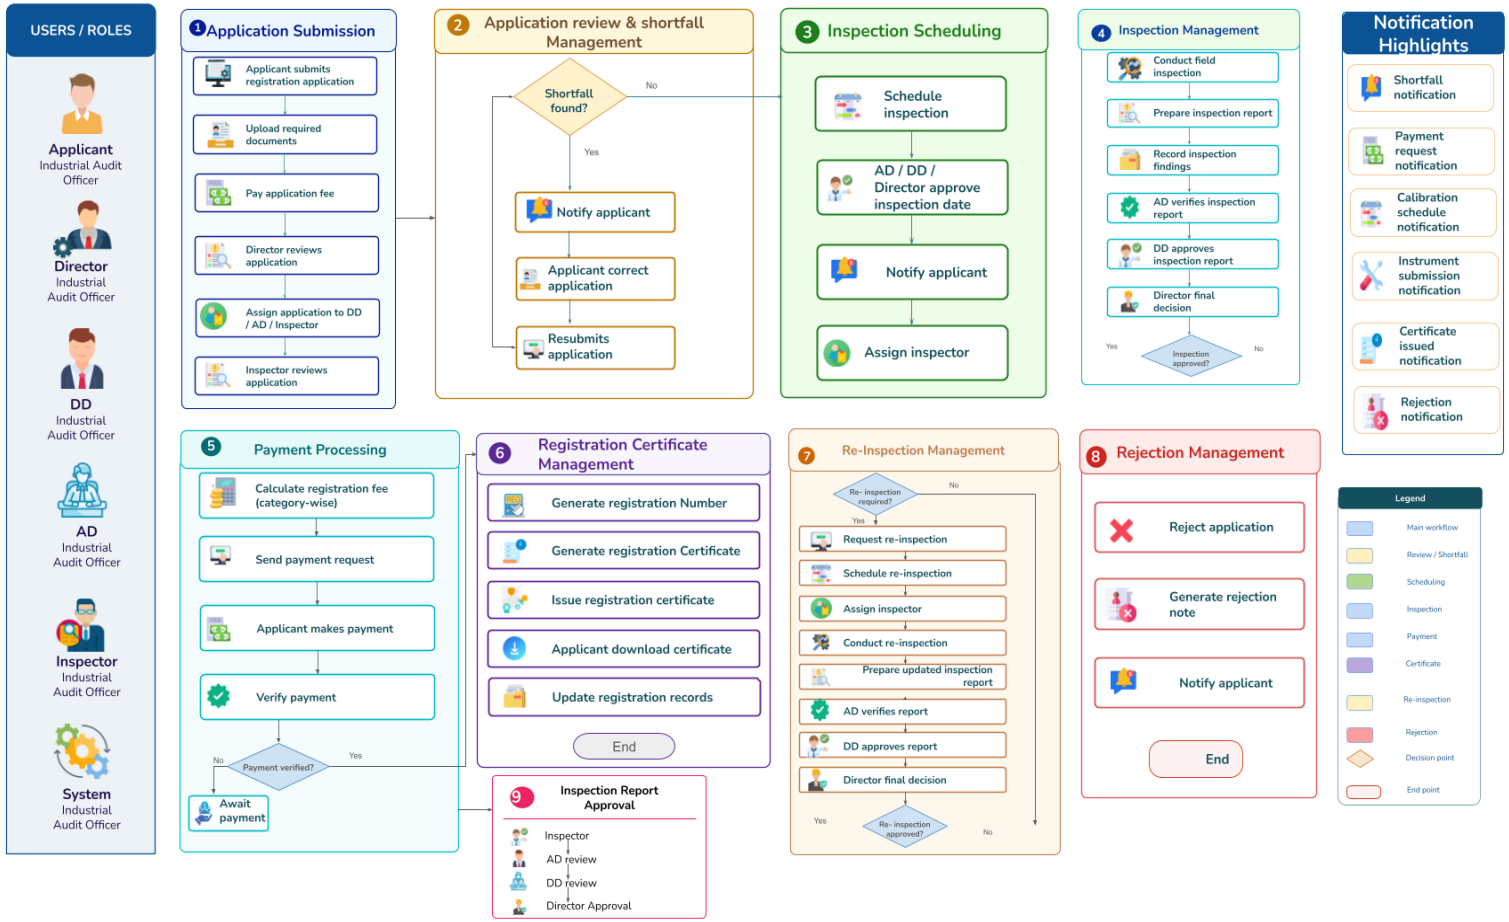

Figure Name: LPG Bottling Plant, LPG Filling Station, and Fuel Filling Station Registration Service Workflow

## Module- 1: Application Submission (Total Feature - 4)

**Feature Description:**

**1. Online Application Submission**

Enables applicants to submit registration applications electronically through the online portal.

**2. Required Document Upload**

Allows applicants to upload all mandatory documents required for registration verification.

**3. Application Fee Payment**

Facilitates payment of the prescribed registration fee through integrated payment methods.

**4. Application Tracking**

Allows applicants to monitor the progress and current status of their submitted applications.

## Module- 2: Application Review & Shortfall Management (Total Feature - 6)

**Feature Description:**

**1. Director Application Review**

Allows the Director to perform an initial review of submitted applications.

**2. Application Assignment (DD/AD/Inspector)**

Assigns applications to the appropriate officers for detailed evaluation.

**3. Inspector Application Review**

Enables inspectors to review applications before conducting inspections.

**4. Shortfall Identification**

Records incomplete information, missing documents, or compliance deficiencies.

**5. Shortfall Notification**

Automatically notifies applicants regarding identified shortfalls.

**6. Customer Resubmission**

Allows applicants to submit corrected information and required documents for further review.

## Module- 3: Inspection Scheduling (Total Feature - 4)

**Feature Description:**

**1. Inspection Date Scheduling**

Schedules inspection dates based on application readiness and inspector availability.

**2. Inspection Date Rescheduling**

Allows authorized officials to modify inspection schedules when necessary.

**3. Multi-Level Inspection Date Approval (AD, DD, Director)**

Supports hierarchical approval before confirming inspection dates.

**4. Inspection Schedule Notification**

Automatically notifies applicants and inspectors of scheduled inspection dates.

## Module- 4: Inspection Management (Total Feature - 4)

**Feature Description:**

**1. Inspector Assignment**

Assigns qualified inspectors to conduct field inspections.

**2. Inspection Execution**

Enables inspectors to perform inspections according to regulatory requirements.

**3. Inspection Report Preparation**

Allows inspectors to prepare digital inspection reports after field inspections.

**4. Inspection Findings Recording**

Records inspection observations, compliance status, and identified issues.

## Module- 5: Inspection Report Verification & Approval (Total Feature - 4)

**Feature Description:**

**1. AD Report Verification**

Enables the Assistant Director to verify submitted inspection reports.

**2. DD Report Approval**

Allows the Deputy Director to review and approve verified reports.

**3. Director Final Decision**

Supports the Director in providing the final approval or rejection decision.

**4. Approval Workflow Tracking**

Tracks the progress of inspection reports throughout the approval workflow.

## Module- 6: Re-inspection Management (Total Feature - 4)

**Feature Description:**

**1. Re-inspection Request**

Initiates re-inspection after corrective actions are requested.

**2. Re-inspection Scheduling**

Schedules follow-up inspections for previously identified deficiencies.

**3. Re-inspection Workflow**

Manages the approval and execution process of re-inspections.

**4. Updated Inspection Report**

Generates revised inspection reports after the re-inspection is completed.

## Module- 7: Payment Processing (Total Feature - 4)

**Feature Description:**

**1. LPG/Fuel Category-wise Registration Fee Request**

Calculates and requests registration fees according to the facility category.

**2. Payment Collection**

Receives registration payments through approved payment channels.

### 3. Payment Verification

Verifies successful payment before continuing the registration process.

### 4. Payment Confirmation

Confirms payment completion and updates the application status.

## Module- 8: Registration Certificate Management (Total Feature - 5)

**Feature Description:**

### 1. Registration Paper Generation

Automatically generates the official registration certificate.

### 2. Registration Number Generation

Creates a unique registration number for each approved registration.

### 3. Registration Paper Issuance

Issues the approved registration certificate to the applicant.

### 4. Registration Paper Download

Allows applicants to download the registration certificate online.

### 5. Registration Record Management

Maintains a centralized repository of all registration records.

## Module- 9: Rejection Management (Total Feature - 3)

**Feature Description:**

### 1. Rejection Decision

Records the final decision to reject an application.

### 2. Rejection Note Generation

Generates documented reasons supporting the rejection decision.

### 3. Customer Notification

Notifies applicants regarding the rejection and its reasons.

## Module- 10: Notification (Total Feature - 6)

**Feature Description:**

### 1. Shortfall Notification

Sends notifications when application deficiencies are identified.

### 2. Inspection Schedule Notification

Notifies applicants and inspectors about inspection schedules.

### 3. Inspection Approval Notification

Sends updates after inspection approval decisions are made.

### 4. Payment Request Notification

Informs applicants when registration fee payment is required.

### 5. Registration Paper Issued Notification

Notifies applicants after successful certificate issuance.

### 6. Rejection Notification

Sends rejection notifications along with the decision status.

## Module- 11: Workflow & Task Management (Total Feature - 5)

**Feature Description:**

**1. Role-based Task Assignment**

Assigns workflow tasks according to user roles and responsibilities.

**2. Multi-Level Workflow**

Supports sequential processing through multiple approval authorities.

**3. Application Status Tracking**

Tracks application progress throughout the registration lifecycle.

**4. Workflow Remarks**

Allows officials to record comments and review observations during processing.

**5. Audit Trail**

Maintains a complete history of workflow activities for transparency and accountability.

## Module- 12: Document Management (Total Feature - 4)

**Feature Description:**

**1. Application Document Management**

Securely stores and manages all submitted application documents.

**2. Inspection Report Management**

Maintains digital inspection reports and related inspection records.

**3. Registration Paper Repository**

Provides centralized storage for issued registration certificates.

**4. Rejection Note Management**

Preserves rejection notes and decision documents for future reference.

## Service-28: LPG Bottling Plant / LPG Filling Station / Fuel Filling Station Renewal

The **LPG Bottling Plant, LPG Filling Station, and Fuel Filling Station Renewal Service** is a complete digital solution that automates the renewal Process, inspection, approval, and certification process for fuel-related establishments. The system enables applicants to submit registration applications online, upload required documents, make registration fee payments, and track application status throughout the process. Applications are reviewed by designated officers through a role-based workflow where deficiencies can be identified, communicated to applicants, and corrected through resubmission.

The solution supports comprehensive inspection management, including inspection scheduling, rescheduling, inspector assignment, field inspection, report preparation, and multi-level approval of inspection reports. Where corrective actions are required, the system facilitates re-inspection requests, scheduling, and updated inspection reporting. Category-wise registration fees are processed through an integrated payment management system with payment verification and confirmation. After successful approval, the system automatically generates registration numbers and registration certificates, allowing applicants to download their approved registration papers online. Applications that fail to meet regulatory requirements are processed through a structured rejection workflow with documented reasons and automated notifications. The solution also provides document management, workflow monitoring, audit trails, role-based task assignment, and automated notifications to ensure transparency, efficiency, accountability, and compliance with regulatory standards.

**3. Inspector Application Review**

Enables inspectors to review applications before conducting inspections.

**4. Shortfall Identification**

Records incomplete information, missing documents, or compliance deficiencies.

**5. Shortfall Notification**

Automatically notifies applicants regarding identified shortfalls.

**6. Customer Resubmission**

Allows applicants to submit corrected information and required documents for further review.

## Module- 3: Inspection Scheduling (Total Feature - 4)

**Feature Description:**

**1. Inspection Date Scheduling**

Schedules inspection dates based on application readiness and inspector availability.

**2. Inspection Date Rescheduling**

Allows authorized officials to modify inspection schedules when necessary.

**3. Multi-Level Inspection Date Approval (AD, DD, Director)**

Supports hierarchical approval before confirming inspection dates.

**4. Inspection Schedule Notification**

Automatically notifies applicants and inspectors of scheduled inspection dates.

## Module- 4: Inspection Management (Total Feature - 4)

**Feature Description:**

**1. Inspector Assignment**

Assigns qualified inspectors to conduct field inspections.

**2. Inspection Execution**

Enables inspectors to perform inspections according to regulatory requirements.

**3. Inspection Report Preparation**

Allows inspectors to prepare digital inspection reports after field inspections.

**4. Inspection Findings Recording**

Records inspection observations, compliance status, and identified issues.

## Module- 5: Inspection Report Verification & Approval (Total Feature - 4)

**Feature Description:**

**1. AD Report Verification**

Enables the Assistant Director to verify submitted inspection reports.

**2. DD Report Approval**

Allows the Deputy Director to review and approve verified reports.

**3. Director Final Decision**

Supports the Director in providing the final approval or rejection decision.

**4. Approval Workflow Tracking**

Tracks the progress of inspection reports throughout the approval workflow.

## Module- 6: Re-inspection Management (Total Feature - 4)

**Feature Description:**

**1. Re-inspection Request**

Initiates re-inspection after corrective actions are requested.

**2. Re-inspection Scheduling**

Schedules follow-up inspections for previously identified deficiencies.

**3. Re-inspection Workflow**

Manages the approval and execution process of re-inspections.

**4. Updated Inspection Report**

Generates revised inspection reports after the re-inspection is completed.

## Module- 7: Payment Processing (Total Feature - 4)

**Feature Description:**

**1. LPG/Fuel Category-wise Registration Fee Request**

Calculates and requests registration fees according to the facility category.

**2. Payment Collection**

Receives registration payments through approved payment channels.

### 3. Payment Verification

Verifies successful payment before continuing the registration process.

### 4. Payment Confirmation

Confirms payment completion and updates the application status.

## Module- 8: Registration Certificate Management (Total Feature - 5)

**Feature Description:**

### 1. Registration Paper Generation

Automatically generates the official registration certificate.

### 2. Registration Number Generation

Creates a unique registration number for each approved registration.

### 3. Registration Paper Issuance

Issues the approved registration certificate to the applicant.

### 4. Registration Paper Download

Allows applicants to download the registration certificate online.

### 5. Registration Record Management

Maintains a centralized repository of all registration records.

## Module- 9: Rejection Management (Total Feature - 3)

**Feature Description:**

### 1. Rejection Decision

Records the final decision to reject an application.

### 2. Rejection Note Generation

Generates documented reasons supporting the rejection decision.

### 3. Customer Notification

Notifies applicants regarding the rejection and its reasons.

## Module- 10: Notification (Total Feature - 6)

**Feature Description:**

### 1. Shortfall Notification

Sends notifications when application deficiencies are identified.

### 2. Inspection Schedule Notification

Notifies applicants and inspectors about inspection schedules.

### 3. Inspection Approval Notification

Sends updates after inspection approval decisions are made.

### 4. Payment Request Notification

Informs applicants when registration fee payment is required.

### 5. Registration Paper Issued Notification

Notifies applicants after successful certificate issuance.

### 6. Rejection Notification

Sends rejection notifications along with the decision status.

## Module- 11: Workflow & Task Management (Total Feature - 5)

**Feature Description:**

**1. Role-based Task Assignment**

Assigns workflow tasks according to user roles and responsibilities.

**2. Multi-Level Workflow**

Supports sequential processing through multiple approval authorities.

**3. Application Status Tracking**

Tracks application progress throughout the registration lifecycle.

**4. Workflow Remarks**

Allows officials to record comments and review observations during processing.

**5. Audit Trail**

Maintains a complete history of workflow activities for transparency and accountability.

## Module- 12: Document Management (Total Feature - 4)

**Feature Description:**

**1. Application Document Management**

Securely stores and manages all submitted application documents.

**2. Inspection Report Management**

Maintains digital inspection reports and related inspection records.

**3. Registration Paper Repository**

Provides centralized storage for issued registration certificates.

**4. Rejection Note Management**

Preserves rejection notes and decision documents for future reference.

## Service-29: Building (Flat) / Establishment Measurement

The **Building (Flat) / Establishment Measurement Service** is a digital solution designed to streamline the complete measurement application and certification process for buildings, flats, and commercial establishments. The system enables applicants to submit applications online, upload required documents, pay measurement fees based on building square footage, and track application progress in real time. Applications are reviewed through a role-based workflow where designated officials verify submitted information, identify deficiencies, and request corrections when necessary. The platform supports inspection scheduling, inspector assignment, on-site measurement, inspection report preparation, and multi-level verification and approval of inspection findings. If discrepancies are identified, the system facilitates re-inspection requests and updated inspection reports. Following successful approval and payment verification, the system automatically generates measurement certificates and registration numbers while maintaining secure digital records. Automated notifications, workflow tracking, document management, audit trails, and role-based task assignment ensure transparency, operational efficiency, regulatory compliance, and accurate measurement certification.

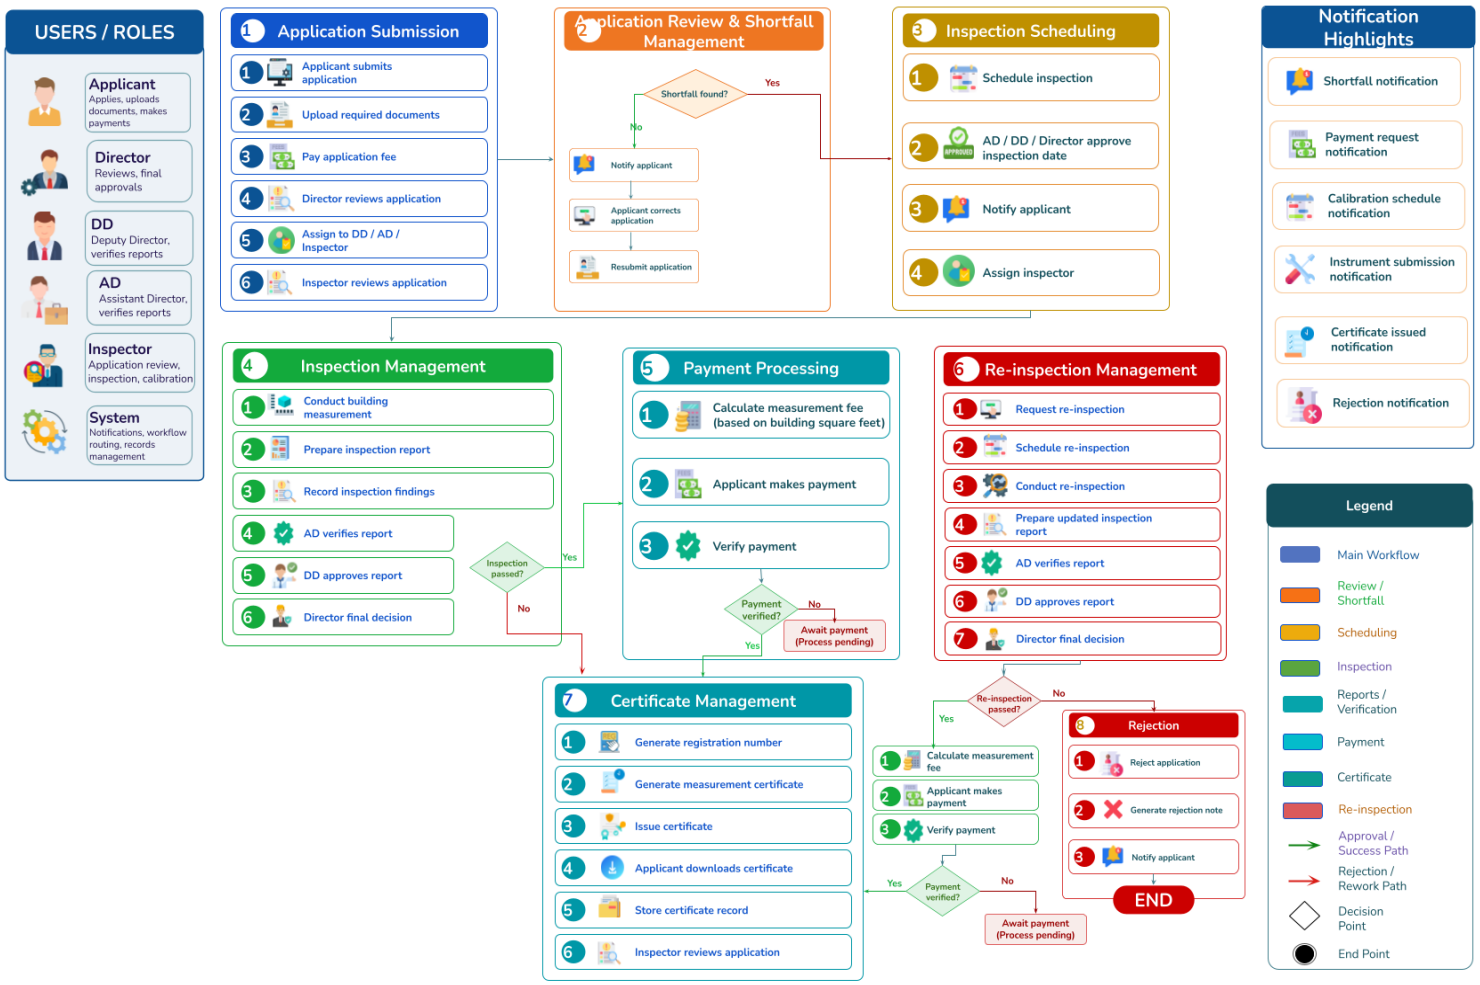

Figure name: Workflow of Building (Flat) / Establishment Measurement Service

## Module- 1: Application Submission (Total Feature - 4)

**Feature Description:**

**1. Online Application Submission**

Enables applicants to submit building or establishment measurement applications through the online portal.

**2. Required Document Upload**

Allows applicants to upload all required supporting documents for verification.

**3. Application Fee Payment**

Facilitates online payment of the prescribed measurement fee.

**4. Application Tracking**

Enables applicants to monitor the progress and current status of their applications.

## Module- 2: Application Review & Shortfall Management (Total Feature - 6)

**Feature Description:**

**1. Director Application Review**

Allows the Director to conduct an initial review of submitted applications.

**2. Application Assignment (DD/AD/Inspector)**

Assigns applications to the appropriate officers for detailed processing.

**3. Inspector Application Review**

Enables inspectors to review application details before conducting measurements.

**4. Shortfall Identification**

Identifies missing information, incomplete documents, or application deficiencies.

**5. Shortfall Notification**

Automatically informs applicants about identified shortfalls.

**6. Customer Resubmission**

Allows applicants to submit corrected information and additional documents.

## Module- 3: Inspection Scheduling (Total Feature - 4)

**Feature Description:**

**1. Inspection Date Scheduling**

Schedules measurement inspections based on application readiness.

**2. Inspection Date Rescheduling**

Allows authorized officials to modify inspection dates when necessary.

**3. Multi-Level Inspection Date Approval (AD, DD, Director)**

Supports approval of inspection schedules through multiple authority levels.

**4. Inspection Schedule Notification**

Sends inspection schedule notifications to applicants and inspectors.

## Module- 4: Inspection Management (Total Feature - 4)

**Feature Description:**

**1. Inspector Assignment**

Assigns inspectors to perform on-site building or establishment measurements.

**2. Inspection Execution**

Enables inspectors to conduct field measurements according to regulatory standards.

**3. Inspection Report Preparation**

Allows inspectors to prepare digital measurement reports.

**4. Inspection Findings Recording**

Records measurement results, observations, and compliance findings.

## Module- 5: Inspection Report Verification & Approval (Total Feature - 4)

**Feature Description:**

**1. AD Report Verification**

Enables the Assistant Director to verify inspection reports.

**2. DD Report Approval**

Allows the Deputy Director to review and approve verified reports.

**3. Director Final Decision**

Supports the Director in making the final approval or rejection decision.

**4. Approval Workflow Tracking**

Tracks inspection reports throughout the approval process.

## Module- 6: Re-inspection Management (Total Feature - 4)

**Feature Description:**

**1. Re-inspection Request**

Initiates a follow-up measurement inspection when corrective actions are required.

**2. Re-inspection Scheduling**

Schedules re-inspections after necessary corrections are completed.

**3. Re-inspection Workflow**

Manages the complete approval and execution process for re-inspections.

**4. Updated Inspection Report**

Generates revised inspection reports based on re-inspection findings.

## Module- 7: Payment Processing (Total Feature - 4)

**Feature Description:**

**1. Building Square Feet-wise Testing Fee Request**

Calculates and requests measurement fees based on the building's total square footage.

**2. Payment Collection**

Collects payments through approved payment channels.

### 3. Payment Verification

Verifies successful payment before certificate issuance.

### 4. Payment Confirmation

Confirms payment completion and updates the application status.

## Module- 8: Certificate Management (Total Feature - 5)

**Feature Description:**

### 1. Registration Paper Generation

Automatically generates the official measurement certificate.

### 2. Registration Number Generation

Creates a unique registration number for each approved application.

### 3. Registration Paper Issuance

Issues the approved measurement certificate to the applicant.

### 4. Registration Paper Download

Allows applicants to download the certificate online.

### 5. Registration Record Management

Maintains a centralized repository of issued measurement certificates.

## Module- 9: Rejection Management (Total Feature - 3)

**Feature Description:**

### 1. Rejection Decision

Records the final rejection decision for unsuccessful applications.

### 2. Rejection Note Generation

Generates documented reasons for application rejection.

### 3. Customer Notification

Notifies applicants regarding the rejection decision and supporting reasons.

## Module- 10: Notification (Total Feature - 6)

**Feature Description:**

### 1. Shortfall Notification

Alerts applicants about missing documents or required corrections.

### 2. Inspection Schedule Notification

Sends notifications regarding scheduled inspection dates.

### 3. Inspection Approval Notification

Notifies applicants after inspection approval decisions.

### 4. Payment Request Notification

Informs applicants when measurement fee payment is required.

### 5. Registration Paper Issued Notification

Notifies applicants after certificate issuance.

### 6. Rejection Notification

Sends notifications regarding application rejection.

## Module- 11: Workflow & Task Management (Total Feature - 5)

**Feature Description:**

**1. Role-based Task Assignment**

Assigns responsibilities based on user roles and organizational hierarchy.

**2. Multi-Level Workflow**

Supports sequential application processing through multiple approval levels.

**3. Application Status Tracking**

Tracks application progress throughout the entire measurement process.

**4. Workflow Remarks**

Allows officials to record comments and review observations.

**5. Audit Trail**

Maintains a complete history of all workflow activities for accountability and transparency.

## Module- 12: Document Management (Total Feature - 4)

**Feature Description:**

**1. Application Document Management**

Securely stores and manages all application documents.

**2. Inspection Report Management**

Maintains digital inspection and measurement reports.

**3. Registration Paper Repository**

Provides centralized storage for issued measurement certificates.

**4. Rejection Note Management**

Stores rejection notes and related decision documents for future reference.

## Service-30: Storage Tank Calibration Service

The **Storage Tank Calibration Service** is a comprehensive digital solution designed to automate the entire storage tank calibration process, from application submission to calibration certificate issuance. The system enables applicants to submit category-wise calibration applications online, upload required documents, pay application fees, generate calibration charts at the client end, and monitor application status throughout the process. Applications are reviewed through a role-based workflow where authorized officials verify submissions, identify deficiencies, and request corrections when necessary. The platform supports calibration scheduling, rescheduling, inspector assignment, field calibration, report preparation, and multi-level verification and approval of calibration reports. During report verification, additional calibration fees can be assessed based on inspection findings and applicable government gazette rates. The system manages additional fee approval, payment collection, and payment verification before certificate issuance. If calibration results do not meet regulatory standards, re-calibration requests, scheduling, and updated calibration reports are managed through a structured workflow. Upon successful completion, the system generates and issues calibration licenses while maintaining centralized digital records. Automated notifications, workflow tracking, audit trails, and secure document management ensure transparency, operational efficiency, regulatory compliance, traceability, and accurate calibration record management.

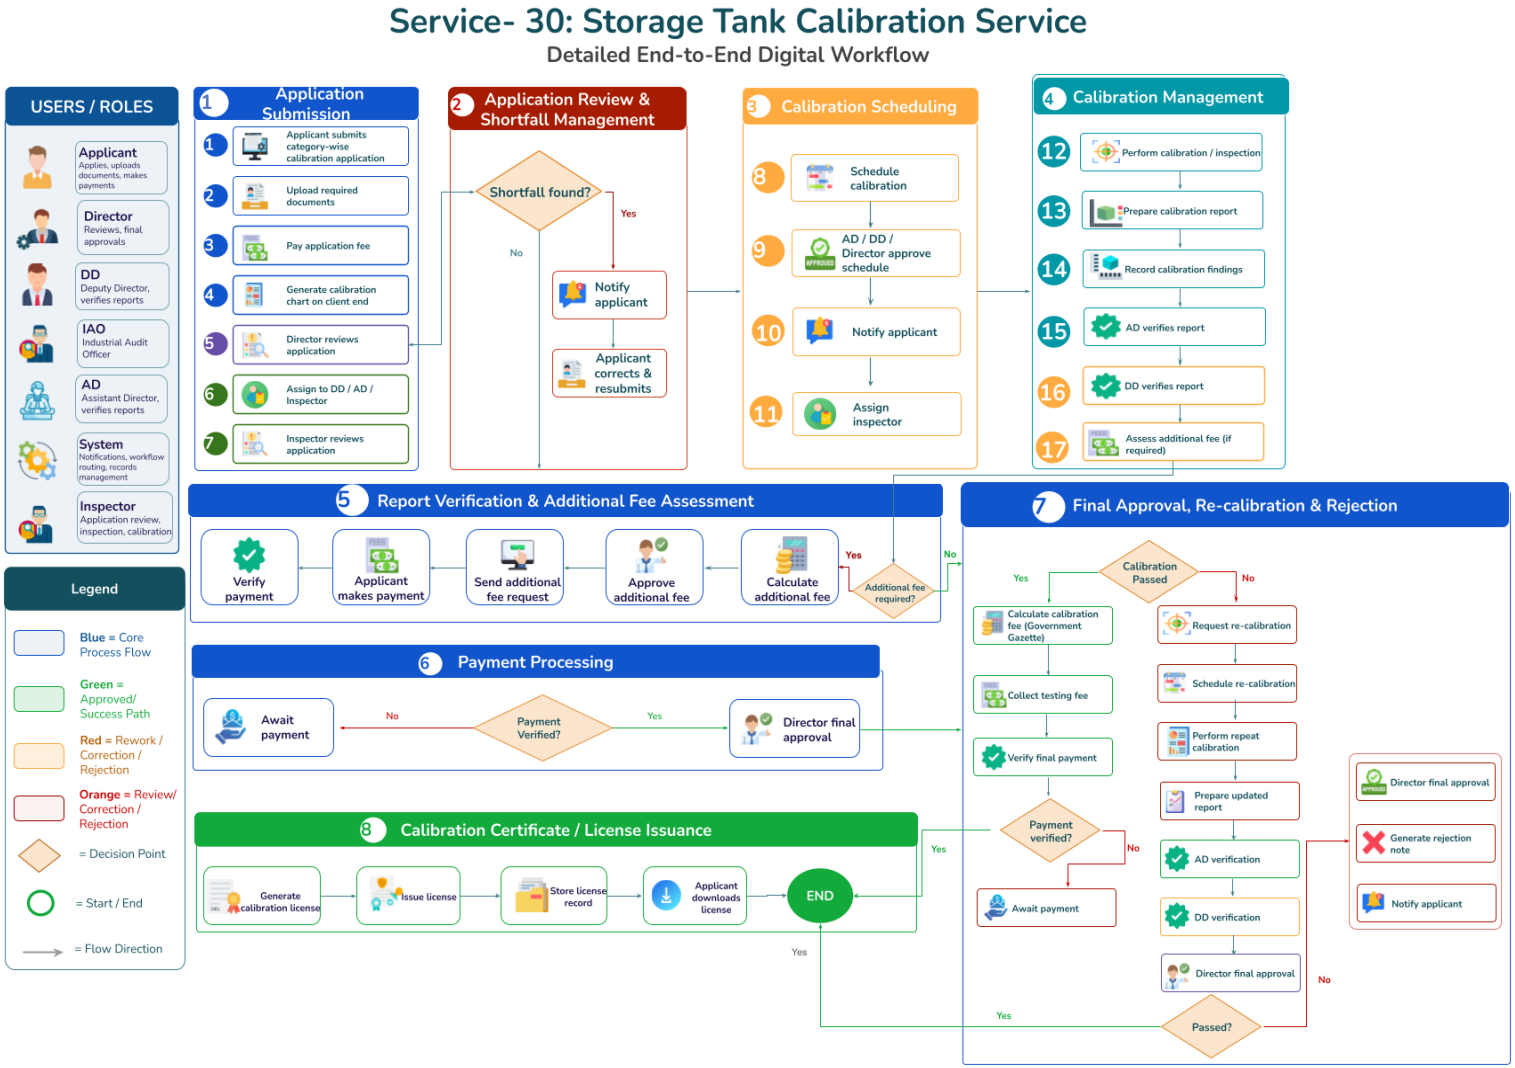

Figure Name: Storage Tank Calibration Service

## Module- 1. Application Submission (Total Feature - 5)

**Feature Description:**

**1. Online Category-wise Application Submission**

Enables applicants to submit storage tank calibration applications based on the appropriate tank category through the online portal.

**2. Required Document Upload**

Allows applicants to upload all mandatory documents required for calibration.

**3. Application Fee Payment**

Facilitates online payment of the prescribed application fee.

**4. Application Tracking**

Enables applicants to monitor the progress and current status of their submitted applications.

**5. Chart Generate on Client End**

Allows applicants to generate and submit calibration charts from the client side where applicable.

## Module- 2: Application Review & Shortfall Management (Total Feature - 6)

**Feature Description:**

**1. Director Application Review**

Allows the Director to perform the initial review of submitted applications.

**2. Application Forwarding (DD/AD/Inspector)**

Assigns applications to the appropriate officials for detailed evaluation.

**3. Inspector Application Review**

Enables inspectors to review applications before calibration.

**4. Shortfall Identification**

Identifies missing documents, incorrect information, or compliance deficiencies.

**5. Shortfall Notification**

Automatically notifies applicants regarding identified shortfalls.

**6. Customer Resubmission**

Allows applicants to submit corrected information and supporting documents.

## Module- 3: Calibration Scheduling (Total Feature - 4)

**Feature Description:**

**1. Calibration Date Scheduling**

Schedules calibration appointments based on operational requirements.

**2. Calibration Date Rescheduling**

Allows authorized officials to modify calibration schedules when necessary.

**3. Multi-Level Calibration Date Approval (AD, DD, Director)**

Supports hierarchical approval before confirming calibration schedules.

**4. Calibration Schedule Notification**

Sends calibration schedule notifications to applicants and inspectors.

## Module- 4: Calibration Management (Total Feature - 4)

**Feature Description:**

**1. Inspector Assignment**

Assigns qualified inspectors to perform storage tank calibration.

**2. Calibration / Inspection Execution**

Enables inspectors to conduct calibration and inspection activities according to regulatory standards.

**3. Calibration Report Preparation**

Allows inspectors to prepare structured digital calibration reports.

**4. Calibration Findings Recording**

Records calibration measurements, observations, and compliance findings.

## Module- 5: Calibration Report Verification (Total Feature - 4)

**Feature Description:**

**1. AD Report Verification**

Enables the Assistant Director to verify calibration reports.

**2. DD Report Verification**

Allows the Deputy Director to review verified reports.

**3. Additional Fee Assessment**

Assesses additional calibration fees based on inspection findings or calibration outcomes.

**4. Director Final Approval**

Supports the Director in providing the final approval of calibration reports.

## Module- 6: Additional Fee Management (Total Feature - 4)

**Feature Description:**

**1. Additional Fee Calculation**

Calculates additional fees according to applicable government regulations.

**2. Additional Fee Approval**

Enables authorized officials to approve additional fee assessments.

**3. Additional Fee Request**

Generates payment requests for additional fees.

**4. Additional Fee Notification**

Automatically notifies applicants regarding additional fee requirements.

## Module- 7: Payment Processing (Total Feature - 6)

**Feature Description:**

**1. Additional Fee Collection**

Collects approved additional calibration fees.

**2. Calibration Fee Based on Government Gazette**

Calculates calibration fees according to the applicable government gazette.

**3. Testing Fee Collection**

Collects testing fees where applicable.

**4. Payment Verification**

Verifies successful payment before certificate issuance.

**5. Payment Confirmation**

Confirms payment completion and updates application status.

**6. Payment Receipt**

Generates digital payment receipts for applicants.

## Module- 8: Calibration Certificate (Total Feature - 4)

**Feature Description:**

**1. License Generation**

Automatically generates the calibration certificate/license after successful approval.

**2. License Issuance**

Issues the approved calibration certificate to the applicant.

**3. License Download**

Allows applicants to download the calibration certificate online.

**4. License Record Management**

Maintains a centralized repository of issued calibration certificates.

## Module- 9: Re-calibration Management (Total Feature - 4)

**Feature Description:**

**1. Re-calibration Request**

Initiates repeat calibration when corrective action is required.

**2. Re-calibration Scheduling**

Schedules follow-up calibration activities.

**3. Repeat Calibration Workflow**

Manages the complete workflow for repeat calibration.

**4. Updated Calibration Report**

Generates revised calibration reports after re-calibration.

## Module-10: Rejection Management (Total Feature - 3)

**Feature Description:**

**1. Rejection Decision**

Records the final rejection decision.

**2. Rejection Note Generation**

Generates documented reasons supporting the rejection.

**3. Customer Notification**

Notifies applicants regarding the rejection decision.

## Module- 11: Notification Management (Total Feature - 5)

**Feature Description:**

**1. Shortfall Notification:**

Alerts applicants regarding missing information or required corrections.

**2. Calibration Schedule Notification:**

Sends notifications regarding scheduled calibration dates.

**3. Additional Fee Notification:**

Informs applicants about approved additional fee requirements.

**4. License Issued Notification:**

Notifies applicants after calibration certificate issuance.

**5, Rejection Notification:**

Sends notifications regarding application rejection.

## Module-12. Workflow & Task Management (Total Feature - 5)

**Feature Description:**

**1. Multi-Level Workflow:**

Supports sequential processing through multiple approval authorities.

**2. Role-based Task Assignment:**

Assigns workflow activities according to user roles and responsibilities.

**3. Application Status Tracking:**

Tracks application progress throughout the calibration lifecycle.

**4. Workflow Remarks:**

Allows officials to record comments and observations during processing.

**5. Audit Trail:**

Maintains a complete history of workflow activities for transparency and accountability.

## Module 13: Document Management (Total Feature - 4)

**Feature Description:**

**1 Application Document Management:**

Securely stores and manages submitted application documents.

**2. Calibration Report Management:**

Maintains digital calibration reports and related records.

**3. License Repository:**

Provides centralized storage for issued calibration certificates.

**4. Rejection Note Management:**

Stores rejection notes and supporting documents for future reference.

## Service-31: Industrial and Scientific Metrology Calibration

The **Industrial and Scientific Metrology Calibration Service** is a comprehensive digital platform designed to manage the complete calibration lifecycle for industrial and scientific measuring instruments. The system enables applicants to submit calibration requests online, complete an initial questionnaire, upload required documents, and track application progress. Applications are reviewed through a role-based workflow where authorized officials assess submissions, identify deficiencies, and request corrections when necessary. Applicants can choose between onsite calibration or offsite calibration by submitting instruments through the One Stop Service (OSS) center. The platform manages instrument receiving, acknowledgement, scheduling, calibration execution, inspection report preparation, and multi-level verification and approval of calibration results. Where instruments fail to meet required standards, the system supports re-calibration and re-inspection workflows with updated reports. Following successful approval, the system generates calibration certificates and calibration stickers, allowing applicants to download certificates and collect released instruments. The solution also includes payment processing, workflow management, automated notifications, document management, audit trails, and centralized record keeping to ensure transparency, operational efficiency, traceability, and compliance with national metrology standards.

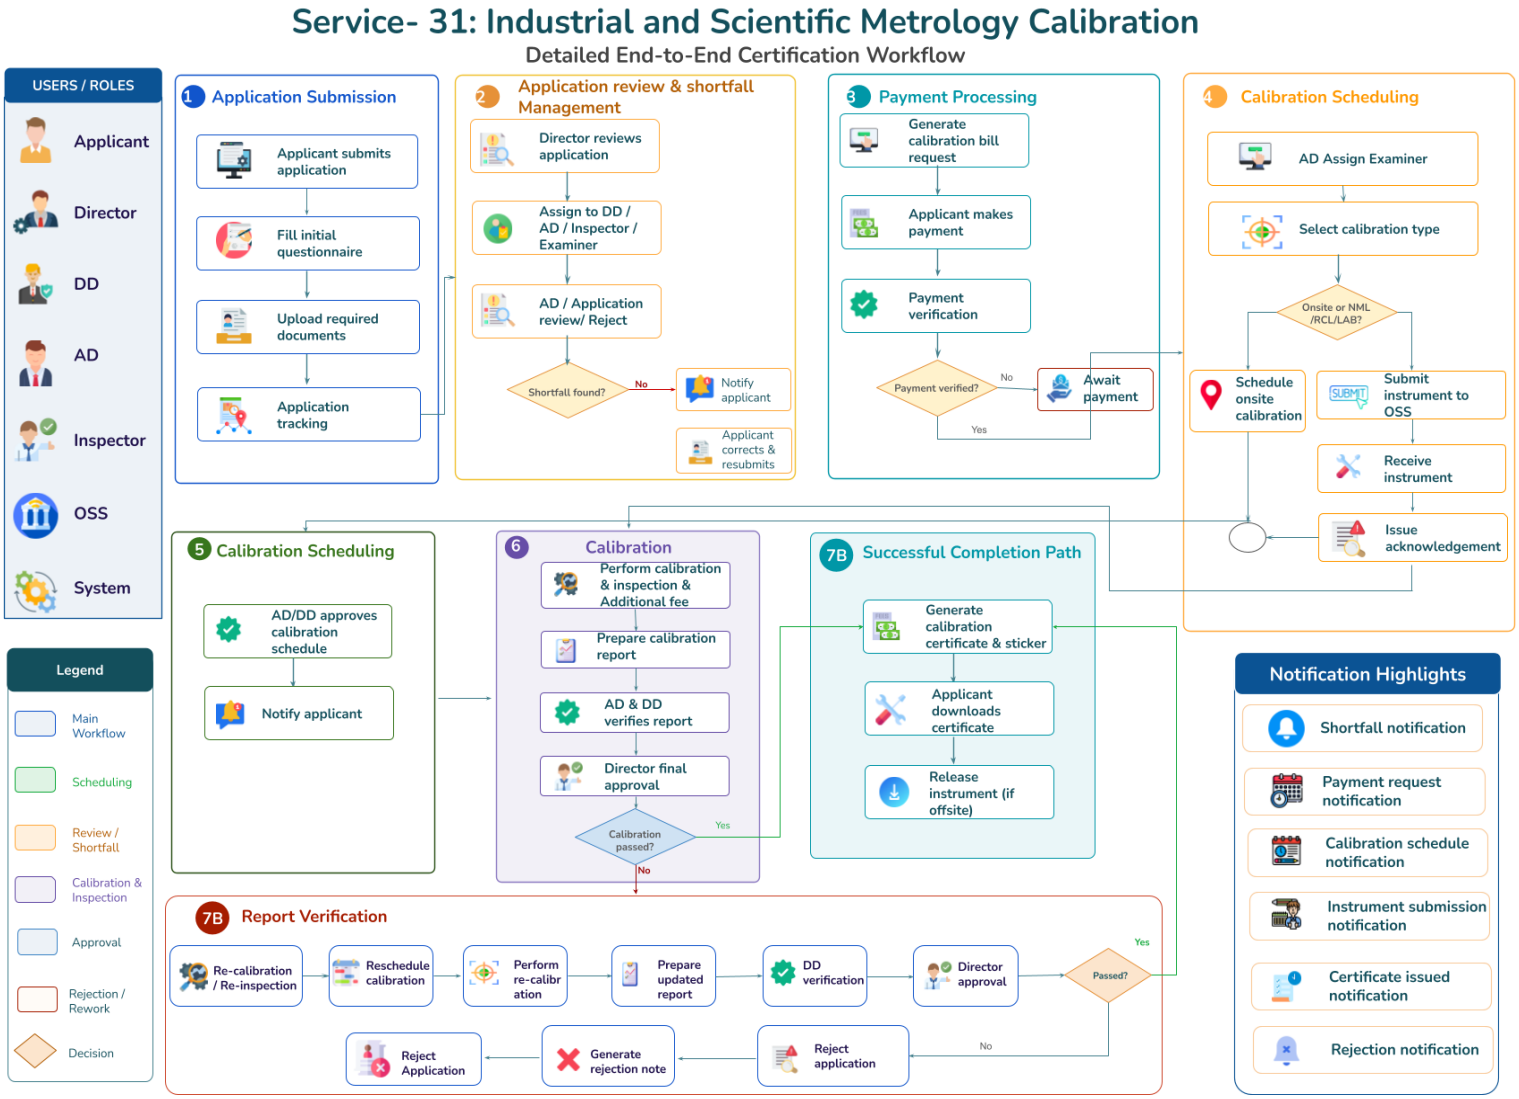

Figure Name: Industrial and Scientific Metrology Calibration

## Module- 1: Application Submission (Total Feature - 4)

**Feature Description:**

**1. Online Application Submission**

Enables applicants to submit calibration applications electronically through the online portal.

**2. Initial Questionnaire**

Collects preliminary information about the instrument, calibration requirements, and applicant details.

**3. Required Document Upload**

Allows applicants to upload all mandatory supporting documents for verification.

**4. Application Tracking**

Enables applicants to monitor the current status and progress of their submitted applications.

## Module- 2: Application Review & Shortfall Management (Total Feature - 6)

**Feature Description:**

**1. Director Application Review**

Allows the Director to perform the initial review of submitted applications.

**2. Application Forwarding (DD/AD/Inspector/Examiner)**

Forwards applications to the appropriate officials for detailed evaluation.

**3. AD Application Review**

Enables the Assistant Director to verify application completeness and compliance.

**4. Shortfall Identification**

Identifies missing documents, incomplete information, or compliance deficiencies.

**5. Shortfall Notification**

Automatically notifies applicants regarding identified shortfalls.

**6. Customer Resubmission**

Allows applicants to submit corrected information and supporting documents.

## Module- 3: Payment Processing (Total Feature - 4)

**Feature Description:**

**1. Calibration Fee Request**

Generates calibration fee requests based on the selected service.

**2. Payment Collection**

Collects calibration fees through approved payment channels.

**3. Payment Verification**

Verifies successful payment before calibration processing.

**4. Payment Confirmation**

Confirms payment completion and updates the application status.

## Module- 4: Calibration Type Selection (Total Feature - 3)

**Feature Description:**

**1. Onsite Calibration Selection**

Allows applicants to request calibration at their own premises.

**2. Offsite (Instrument Submission) Selection**

Allows applicants to choose laboratory calibration by submitting instruments.

**3. Calibration Mode Management**

Manages and records the selected calibration method throughout the workflow.

## Module- 5: Instrument Receiving (OSS) (Total Feature - 4)

**Feature Description:**

**1. Instrument Submission**

Records the submission of instruments for laboratory calibration.

**2. OSS Instrument Receiving**

Enables OSS personnel to receive and register submitted instruments.

**3. Instrument Acknowledgement**

Generates acknowledgement receipts confirming instrument submission.

**4. Instrument Tracking**

Tracks instrument movement throughout the calibration process.

## Module- 6: Calibration Scheduling (Total Feature - 4)

**Feature Description:**

**1. Onsite Calibration Date Scheduling**

Schedules onsite calibration based on availability and operational requirements.

**2. Date Rescheduling**

Allows authorized officials to revise scheduled calibration dates when necessary.

**3. DD Approval of Calibration Date**

Enables the Deputy Director to approve proposed calibration schedules.

**4. Customer Notification**

Sends calibration schedule notifications to applicants.

## Module- 7: Calibration & Inspection (Total Feature - 4)

**Feature Description:**

**1. Inspector Assignment**

Assigns qualified inspectors or calibration engineers to calibration tasks.

**2. Calibration/Inspection Execution**

Enables execution of calibration and inspection activities according to standards.

**3. Inspection/Calibration Report Preparation**

Allows preparation of structured digital calibration reports.

**4. Findings Recording**

Records calibration measurements, observations, and compliance findings.

## Module- 8: Report Verification & Approval (Total Feature - 3)

**Feature Description:**

**1. DD Report Verification**

Enables the Deputy Director to verify submitted calibration reports.

**2. Director Final Approval**

Supports final approval of calibration results by the Director.

**3. Approval History**

Maintains a complete history of report verification and approval activities.

## Module- 9: Re-calibration / Re-inspection (Total Feature - 4)

**Feature Description:**

**1. Re-calibration Request**

Initiates repeat calibration when corrective actions are required.

**2. Re-inspection Workflow**

Manages the approval and execution process for repeat inspections.

**3. Re-scheduling**

Schedules follow-up calibration activities after corrections are completed.

**4. Updated Report Generation**

Produces revised calibration reports after re-calibration or re-inspection.

## Module- 10: Calibration Certificate Release (Total Feature - 4)

**Feature Description:**

**1. Calibration Certificate and Sticker Generation**

Automatically generates calibration certificates and instrument calibration stickers.

**2. Calibration Certificate and Sticker Download**

Allows applicants to download approved certificates and stickers.

**3. Instrument Release**

Records the release of calibrated instruments to applicants.

**4. Calibration Certificate Record Management**

Maintains a centralized repository of issued calibration certificates.

## Module- 11: Rejection Management (Total Feature - 3)

**Feature Description:**

**1. Rejection Decision**

Records the final rejection decision for unsuccessful applications.

**2. Rejection Note Generation**

Generates official rejection notes with documented reasons.

### 3. Customer Notification

Notifies applicants regarding rejection decisions and supporting reasons.

## Module- 12: Notification Module (Total Feature - 6)

**Feature Description:**

### 1. Shortfall Notification

Alerts applicants regarding missing information or documentation.

### 2. Payment Request Notification

Notifies applicants when calibration fee payment is required.

### 3. Calibration Schedule Notification

Sends scheduled calibration date notifications.

### 4. Instrument Submission Notification

Confirms successful instrument submission and receipt.

### 5. License Issued Notification

Notifies applicants when calibration certificates have been issued.

### 6. Rejection Notification

Send rejection notifications with decision details.

## Module- 13: Workflow & Task Management (Total Feature - 5)

**Feature Description:**

### 1. Multi-Level Workflow

Supports sequential processing across multiple approval authorities.

### 2. Role-based Task Assignment

Assigns workflow activities according to user roles and responsibilities.

### 3. Application Status Tracking

Tracks application progress throughout the calibration lifecycle.

### 4. Workflow Remarks

Allows officials to record comments and review observations.

### 5. Audit Trail

Maintains a complete history of workflow activities for accountability and transparency.

## Module- 14: Document Management (Total Feature - 5)

**Feature Description:**

### 1. Application Document Management

Securely stores and manages submitted application documents.

### 2. Questionnaire Management

Maintains completed applicant questionnaires and related records.

### 3. Inspection/Calibration Report Management

Stores calibration reports and inspection records digitally.

### 4. License Repository

Provides centralized storage for issued calibration certificates and related documents.

### 5. Rejection Note Management

Maintains rejection notes and supporting documents for future reference.

## Service-32: Verification Service

The **Verification Service** is a comprehensive digital solution designed to automate the complete verification process from application submission to certificate and sticker issuance. The system enables applicants to submit verification applications online based on General and Samiti/Bazar/Association/Malik categories, upload required documents, pay application fees, and monitor application status through a centralized digital portal. Applications are processed through a configurable role-based workflow where authorized officials review submissions, assign applications to relevant officers, identify deficiencies, request corrections, schedule verification activities, and conduct field verification. The platform supports verification report preparation, multi-level report verification, approval management, re-inspection or re-calibration where required, and issuance of verification certificates and stickers. Upon successful completion, the system generates and issues digital certificates while maintaining centralized records of applications, reports, certificates, and supporting documents. Automated notifications, workflow tracking, audit trails, and secure document management ensure transparency, regulatory compliance, operational efficiency, traceability, and accurate verification record management.

# Service- 32: Verification Service

## Detailed End-to-End Certification Workflow

## Module-1: Application Submission Module (Total Feature - 4)

**Feature Description:**

**1. Online Application Submission Based on General and Samiti/Bazar/Association/Malik Category**

Enables applicants to submit verification applications online based on the applicable applicant category through the digital portal.

**2. Required Document Upload**

Allows applicants to upload all mandatory documents required for the verification process.

**3. Application Fee Payment**

Facilitates secure online payment of the prescribed verification application fee.

**4. Application Tracking**

Enables applicants to monitor the progress and current status of their submitted applications.

## Module-2: Application Review & Assignment Module (Total Feature - 4)

**Feature Description:**

**1. Director Application Review**

Allows the Director to perform the initial review of submitted verification applications.

**2. Application Forwarding/Assignment (DD/AD/Inspector)**

Assigns applications to the appropriate Deputy Director, Assistant Director, or Inspector for further processing.

**3. Role-based Assignment**

Automatically assigns verification tasks according to predefined user roles and responsibilities.

**4. Workflow Remarks**

Allows reviewing officials to record comments, observations, and processing notes during application review.

## Module-3: Shortfall Management Module (Total Feature - 5)

**Feature Description:**

**1. Application Review**

Enables assigned officials to review submitted applications and supporting documents for completeness.

**2. Shortfall Identification**

Identifies missing documents, incorrect information, or compliance deficiencies.

**3. Shortfall Notification**

Automatically notifies applicants regarding identified deficiencies requiring correction.

**4. Customer Correction**

Allows applicants to update application information and correct identified deficiencies.

**5. Application Resubmission**

Enables applicants to resubmit corrected applications along with updated supporting documents.

## Module-4: Calibration Scheduling Module (Total Feature - 4)

**Feature Description:**

**1. Calibration Date Scheduling**

Schedules verification or calibration appointments based on operational availability.

**2. Calibration Date Rescheduling**

Allows authorized officials to modify scheduled verification dates when necessary.

**3. Multi-Level Calibration Date Approval (AD, DD, Director)**

Supports hierarchical approval before confirming verification schedules.

**4. Calibration Schedule Notification**

Automatically notifies applicants and assigned inspectors regarding scheduled verification dates.

## Module-5: Calibration Management Module (Total Feature - 3)

**Feature Description:**

**1. Calibration Execution**

Enables inspectors to perform field verification and calibration activities according to applicable standards.

**2. Calibration Report Preparation**

Allows inspectors to prepare structured digital verification and calibration reports.

**3. Calibration Findings Recording**

Records inspection measurements, observations, verification results, and compliance findings.

## Module-6: Calibration Report Verification Module (Total Feature - 4)

**Feature Description:**

**1. AD Report Verification**

Allows the Assistant Director to verify submitted verification reports.

**2. DD Report Verification**

Enables the Deputy Director to review and validate verified reports.

**3. Director Final Approval**

Supports the Director in providing the final approval of verification reports.

**4. Approval History**

Maintains a complete history of report verification and approval activities.

## Module-7: Calibration Certificate and Sticker Module (Total Feature - 3)

**Feature Description:**

**1. Certificate and Sticker Issuance**

Generates and issues approved verification certificates and verification stickers upon successful completion.

**2. Certificate and Sticker Download**

Allows applicants to download issued verification certificates and related documents online.

**3. Certificate Record Management**

Maintains a centralized repository of issued verification certificates and stickers.

## Module-8: Re-inspection / Re-calibration Management Module (Total Feature - 4)

**Feature Description:**

**1. Re-inspection / Re-calibration Request**

Initiates repeat verification or calibration when corrective action is required.

**2. Re-scheduling**

Schedules follow-up verification or calibration activities after approval.

**3. Repeat Calibration Workflow**

Manages the complete workflow for repeat verification and calibration activities.

**4. Updated Calibration Report**

Generates revised verification reports following successful re-inspection or re-calibration.

## Module-9: Rejection Management Module (Total Feature - 3)

**Feature Description:**

**1. Rejection Decision**

Records the final rejection decision for applications that fail verification requirements.

**2. Rejection Letter Generation**

Generates official rejection letters specifying the reasons for application rejection.

**3. Customer Notification**

Automatically notifies applicants regarding the rejection decision.

## Module-10: Notification Module (Total Feature - 5)

**Feature Description:**

**1. Shortfall Notification**

Alerts applicants regarding missing information or required corrections.

**2. Calibration Schedule Notification**

Sends notifications regarding scheduled verification or calibration dates.

**3. Approval Notification**

Notifies applicants when verification reports receive final approval.

**4. License Issued Notification**

Informs applicants after successful issuance of the verification certificate and sticker.

### 5. Rejection Notification

Sends notifications regarding application rejection.

## Module-11: Workflow & Task Management Module (Total Feature - 5)

**Feature Description:**

### 1. Multi-Level Workflow

Supports sequential processing through multiple approval authorities.

### 2. Role-based Task Assignment

Assigns workflow activities according to user roles and organizational responsibilities.

### 3. Application Status Tracking

Tracks application progress throughout the complete verification lifecycle.

### 4. Workflow Remarks

Allows officials to record comments and observations during workflow processing.

### 5. Audit Trail

Maintains a complete history of workflow activities for transparency and accountability.

## Module-12: Document Management Module (Total Feature - 4)

**Feature Description:**

### 1. Application Document Management

Securely stores and manages submitted application documents throughout the verification process.

### 2. Calibration Report Management

Maintains digital verification and calibration reports along with supporting records.

### 3. License Repository

Provides centralized storage and retrieval of issued verification certificates and related documents.

### 4. Rejection Letter Management

Stores rejection letters and supporting documents for future reference and audit purposes.

## Service-33: Mobile Court & Surveillance e-Service

The **Mobile Court & Surveillance e-Service** is a comprehensive digital platform designed to streamline, centralize, and modernize BSTI's Mobile Court and Surveillance operations for both Certification Mark (CM) and Metrology activities. The system provides an end-to-end digital environment for recording field operations, managing products, capturing case information, tracking samples, uploading test reports, and monitoring operational activities. The Mobile Court Management module enables authorized users to create court records, select court types, manage multiple products, record product sources, fines, company information, offences, DCR details, imprisonment information, and remarks. The Product Management module maintains product categories, product masters, CM/Metrology mappings, and dynamic product filtering. The Surveillance Management module supports surveillance entry, inspection team management, product selection, observations, DCR information, case counts, and remarks. The Sample Management module records collected samples, brand names, batch/serial numbers, quantities, BDS test results, and CA-related information. Test reports and supporting documents can also be uploaded and attached to respective records. The platform further provides unique Tracking IDs and status tracking for Mobile Court and Surveillance activities. Administrative capabilities include Magistrate Management, Product Master Administration, Office Configuration, and Lookup Management. In the future phase, configurable approval workflows and automated routing, notifications, and approvals will further enhance operational efficiency. Overall, the solution will reduce manual paperwork, improve transparency and traceability, standardize field operations, and provide BSTI with a secure and efficient digital management system.

# MOBILE COURT & SURVEILLANCE e-SERVICE WORKFLOW

## Module 1: Mobile Court Management (Total Feature - 18)

**Features Description**

**1: Mobile Court Entry**

Allows authorized users to create a new Mobile Court operation.

**2: Court Type Selection**

Select one or multiple Court Types using multi-select dropdown.

**3: Product Type Selection**

Allows selection of Product Type (CM or Metrology). The system dynamically loads relevant product categories and products based on the selected type.

**4: Product Category Selection**

Displays category list according to selected Product Type.

**5: Product Name Selection**

Product Name dropdown automatically loads products under the selected category.

**6: Multiple Product Selection**

Supports adding multiple products within a single Mobile Court operation.

**7: Dynamic Product Box**

Users can add multiple Product Information sections using the Add (+) button.

**8: Fine Entry**

Separate Fine Amount field for every product included in the Mobile Court.

**9: Product Source**

Specify whether the product is Imported or Local through checkbox selection.

**10: Office Information**

Automatically retrieves Office Information from a logged-in user's profile.

**11: Mobile Court Details**

Description

Capture Mobile Court details including:

- Office
- Memo Number
- Date
- Court Type
- Address
- Team Information

**12: Company Information**

Capture Company Name and Address for each Mobile Court case.

**13: Product Details**

Maintain detailed product information associated with each Mobile Court.

**14: Offence Description**

Large text area to record offence details.

**15: DCR Information**

Capture DCR Number and Date.

**16: Number of Cases**

Record total number of legal cases initiated.

**17: Imprisonment Information**

Record imprisonment duration (if applicable).

**18: Remarks**

General remarks section for additional notes.

## Module 2: Product Management (Total Feature - 5)

**Features Description**

**1: Product Category Management**

Maintain Product Categories for CM and Metrology.

**2: Product Master**

Create and manage a master list of products.

**3: Product Type Mapping**

Map products with CM or Metrology.

**4: Product Category Mapping**

Associate products with categories.

**5: Dynamic Product Filtering**

Automatically filter available products according to selected Product Type and Category.

## Module 3: Surveillance Management (Total Feature - 10)

**Features Description**

**1: Surveillance Entry**

Create Surveillance records for CM and Metrology separately.

**2: Surveillance Type**

Select surveillance category.

**3: Office Details**

Auto-populate office information based on login.

**4: Memo Information**

Capture Memo Number and Date.

**5: Team Member Management**

Maintain inspection team members including:

- Name
- Designation

**6: Product Selection**

Select products for surveillance.

**7: Product Description**

Record surveillance observations for each product.

**8: DCR Information**

Capture DCR Number (if applicable).

**9: Number of Cases**

Record total number of cases detected during surveillance.

**10: Remarks**

Maintain additional comments.

## Module 4: Sample Management (Total Feature - 7)

**Features Description**

**1: Sample Information Entry**

Capture sample details collected during Mobile Court or Surveillance.

**2: Brand Name**

Record Brand Name.

**3: Batch/Serial Number**

Capture Batch or Serial Number.

**4: Quantity**

Record collected sample quantity.

**5: Sample Remarks**

Maintain remarks for each sample.

**6: BDS Result Recording**

Capture laboratory/BDS test result.

**7: CA Field**

Maintain CA-related information based on laboratory outcome.

## Module 5: Test Report Management (Total Feature - 2)

**Features Description**

**1: Test Report Upload**

Upload laboratory test reports against Mobile Court or Surveillance records.

**2: Report Attachment**

Support multiple document attachments.

## Module 6: Tracking & Monitoring (Total Feature - 3)

**Features Description**

**1: Mobile Court Tracking ID**

Generate a unique Tracking ID for every Mobile Court.

**2: Surveillance Tracking ID**

Generate a unique Tracking ID for every Surveillance record.

**3: Status Tracking**

Track progress of Mobile Court and Surveillance activities.

## Module 7: Administration (Total Feature - 2)

**Features Description**

**1: Magistrate Management**

Manage Magistrate information with dropdown selection.

**2: Product Master Administration**

Admin can Add, Edit, Update, and Maintain Product Master.

**3: Office Configuration**

Manage office-specific configurations.

**4: Lookup Management**

Maintain Court Types, Categories, Product Types, and other master data.

## Module 8: Workflow Management (Future Phase) (Total Feature - 2)

**Features Description**

**1: Mobile Court Approval Workflow**

Configurable approval workflow for Mobile Court records.

**2: Surveillance Approval Workflow**

Approval workflow for Surveillance records.

**3: Automated Workflow**

Automated routing, approval, and notification process for Mobile Court and Surveillance activities.
